## PREFACE TO THE FIRST EDITION.

---

A new compilation of Recipes for American Iced Drinks has for some time been urgently called for owing to former publications being now out of print. It would have been possible to obtain from fresh sources various Recipes, but after consideration it was thought better to reproduce those of a well-known Expert whose knowledge and experience it was felt could not well be improved upon, and to whom due acknowledgments are hereby tendered.

To these are added some Recipes of Non-alcoholic Beverages which may be found useful by a considerable class of customers. We are indebted for these to the well-known firm of Messrs. W. J. Bush & Co., Ltd., Ash Grove, Hackney.

### Additional Non=alcoholic Beverages.

---

*NOTE.—The following Recipes are those in general use, and make the highest class beverages. Taste, however, varies in different parts of the country, especially in regard to colour and acidity, and it would be impossible to give absolute directions to suit everybody. It must, therefore, be left to the judgment and skill of the manipulator to make such alterations as may be most suited to his trade.*

#### TO MAKE PLAIN SYRUP.

Take of finest refined sugar 6 lbs. ; add 2 pints of water. When all dissolved, gently boil for one minute ; withdraw the heat and remove the scum ; gently boil up again for another minute, and remove any further scum ; then add sufficient cold water to make 1 gallon (about 3 pints of water will be

COUNTER FOUNTAIN.

required). This produces a syrup equal to about 47 Twaddell, its specific gravity 1.235, and is the strength generally used by aerated water makers, and upon which the following recipes are based.

If a sugar be employed of such purity that no scum or only a small trace rise to the surface after boiling, then it is preferable not to boil the syrup, but simply to boil the water to destroy any germs that may be present, and then whilst hot add the sugar, and when dissolved the other ingredients.

In order to assist the solution of the 6 lbs. of sugar in the first 2 pints of water, a little heat may be used, not brought up to boiling point, but only until the sugar be dissolved.

#### DIRECTIONS FOR MIXING.

While the syrup is still warm add the citric or tartaric acid, and when dissolved add the colouring (previously thinned if it be a thick colouring by mixing with two or three times its bulk of warm water). When the syrup has cooled, and is about lukewarm, add gradually the essence—stirring at the same time—then the French cream, preservative, and other ingredients.

These syrups are generally perfectly bright when made, but for various reasons they are sometimes cloudy after being mixed. When such is the case pass them through a filtering bag.

*The quantity of flavoured syrup to be used is 1½ ozs. to the 10 oz. bottle, and, of course, half the quantity for splits.*

CAUTION.—No matter how pressed the mineral water maker may be for the time, he must never bottle while the syrup is hot; it should be quite cold.

#### AMERICAN LEMON SQUASH.

Half fill the shaker with cracked ice (about the size of nuts), or with shaved ice, put in 1 ounce of plain syrup, or 3 teaspoonfuls of powdered sugar, add the juice of one good-sized lemon, and give two dashes of acid phosphate; nearly fill the shaker

with soda water, mix well; put strainer over shaker and pour into glass. Drop in a slice of lemon and squeeze a little juice from a piece of lemon-rind to increase the bouquet. Serve with straws.

#### AMMONIA COCKTAIL.

(Good Morning Tonic for Headache.)

Draw 2 ounces of orange syrup into a 12-ounce glass and add  $\frac{1}{2}$  drachm of aromatic spirits of ammonia; about half fill the glass with soda water, then add half teaspoonful of bi-carbonate of soda. Stir well and handle quickly. (This Cocktail should be drunk at once.)

#### "BRITANNIA" TONIC (EXCELLENT).

To make, take—

Spirits of ammonia co. ...	...	1 OZ.
Tincture of gentian co. ...	...	2 OZS.
Tincture of rhubarb co. ...	...	1 OZ.
Tincture of cardamom co. ...	...	6 OZS.

Use 1 drachm (or 1 teaspoonful) as a dose. For use, draw 1 ounce of orange syrup into an 8-ounce glass, add 1 drachm of Britannia Tonic, and fill up with soda water without foaming. Put in a preserved glacé cherry in serving; no straws required.

The above can be used with Egg Tonic Phosphate.

#### CALISAYA EGG PHOSPHATE.

Break a new laid egg into a 12-ounce glass in front of the customer; draw 2 ounces of orange syrup, and add 1 drachm of Calisaya Tonic, transfer to shaker and mix well, then slowly draw off soda water until shaker is nearly full, pour into a glass and back several times to thoroughly mix and serve with a good head. Grate a little nutmeg on top of foam.

#### CHERRY FLIP.

## HIGH-CLASS CHOCOLATE ICE CREAM (EXTRA QUALITY).

N.B.—The addition of a teaspoonful of vanilla extract will much improve the quality.

## CHOCOLATE SYRUP.

To make, put 1 pint of cold water into a copper boiling pan or an enamelled saucepan, and let it boil, then add gradually  $\frac{1}{2}$  pound of chocolate powder (Rowntree's unsweetened). Break a new laid egg into a 12-ounce glass in front of customer, add 4 ounces of fresh milk and 2 ounces of plain syrup; transfer to shaker, mix well, and fill up with iced soda water until nearly full; pour from shaker to glass several times to thoroughly mix and serve with a good head. Both these forms make splendid aerated ginger beers.

To make, use 8 pounds granulated white sugar to 1 gallon of boiling water.

N.B.—For cream drinks, use 1 part of pure cream to 2 parts of milk, or for cheapness 1 part of condensed (Nestle's) milk to 2 of milk.

## SODA COCKTAIL.

Half fill the shaker with cracked ice, draw 2 ounces of grape syrup and 1 ounce of plain syrup (or 1 teaspoonful of powdered sugar), put in the juice of half a lemon, and give two dashes of acid phosphate; nearly fill the shaker with soda water, mix and strain into glass, add a slice of lemon or orange and a preserved glacé cherry. Use ladle to serve with, and put the whipped cream on all cream beverages.

## EGG FLIP.

(See Ice Cream Flip.)

Repeat above, but put 2 ounces of fresh cream instead of ice cream.

## MINERAL WATERS.

In the manufacture of mineral waters it is very important that makers should use the respective salts after which the waters are named.

Large doses of Bicarbonate of Soda, Potash, &c., such as are recommended in the British Pharmacopœia for Medicinal Mineral Waters, of course may be unpalatable or injurious to many if taken regularly. This is why, for ordinary trade, only 3 to 5 grains per bottle are recommended, while the medicinal should contain three times that quantity.

LITHIA.  
 POTASH WATER.  
 SELTZER WATER.  
 SODA WATER.  
 CARLSBAD.  
 HARROGATE.  
 VICHY.

N.B.—For each of the above Medicinal Waters a proper solution can be supplied.

 HINTS FOR DISPENSERS.

The success of a Soda Fountain largely depends on skill, aptitude, and civility.

Everything about it should be neat and scrupulously clean.

Syrup jars should be taken out at least once a week, the remainder of syrup passed through muslin, the jars washed out and refilled.

Straws should *not* be given for Egg Drinks unless asked for, but otherwise straws should be put into the glass when serving.

The Syrups made from the preceding Recipes are from pure Fruit Juices, and not with *Artificial* Essences.
