MAKING HEATING CALCULATIONS

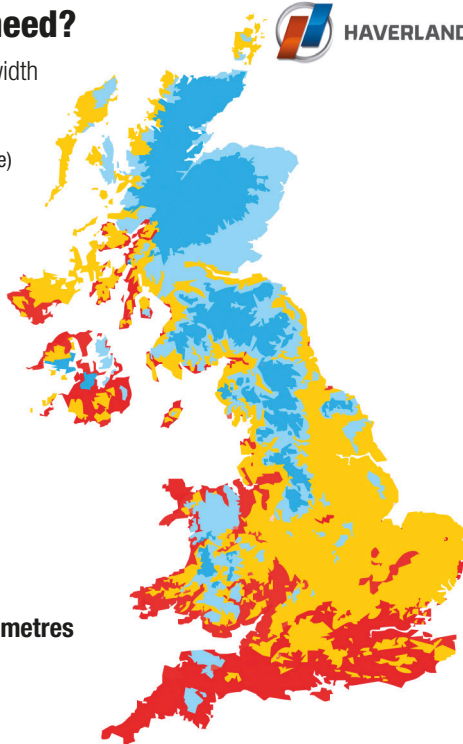

Not sure which size radiators you need?

Measure the room. You will need to know the length and width of the room as well as the height of the ceiling in metres.

Recommended performance table (Watts per square metre)

Facade orientation	Not insulated		Normal insulation	
	North	South	North	South
CLIMATE ZONE				
Zone A	100	95	90	80
Zone B	105	100	95	85
Zone C	110	105	100	90
Zone D	115	110	105	95

For rooms with ceilings heights up to 3 metres

Example: 5 metres x 3 metres = 15 square metres

Total sq m = 15 sq m x 100 watts = 1500 watts

Recommendation: 1 x RC12 TT = 1500 watts

For rooms with ceiling heights from 3 metres to 3.5 metres

Example: 6 metres x 5 metres = 30 square metres

Ceiling height: 3.5 metres ÷ 3 = 1.16

Multiply 30 sq m x 1.16 = 34.80 cubic metres

Total cubic metres = 34.80 sq m x 100 watts = 3,480 watts

Recommendation: 2 x RC12 Compact TTi @ 1800 watts each = 3600 watts

For rooms with ceiling height of 4 metres and above contact Haverland UK for calculation details.

Up to 3m height			3m to 3.5m height		
Model	Watts	Max sq.m room	Model	Watts	Max sq.m room
RC 4 TT	500	5	RC 4 TT	500	4.31

RC 12 Compact TTi	1800	18	RC 12 Compact TTi	1800	17.24

These calculations should be considered as average depending on location, orientation and insulation.
