Plate Panel Systems

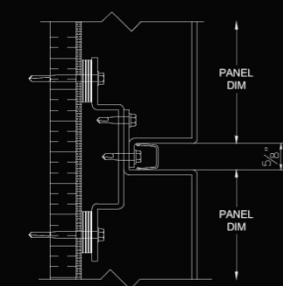

Rain Screens

The rain screen is a single - component wall system. The system can be installed in new construction or as part of building renovation. RS100, 200, 300, 400

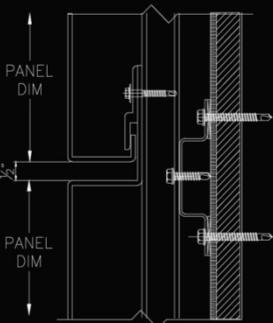

A rain screen is the exterior weather-facing surface of an exterior wall detail that stands off from the moisture-resistant surface of the structural backup wall. The rain screen is the first barrier between conditions that exist on the outside of a walled building and conditions that are required on the inside of a walled building

Barrier Panel System

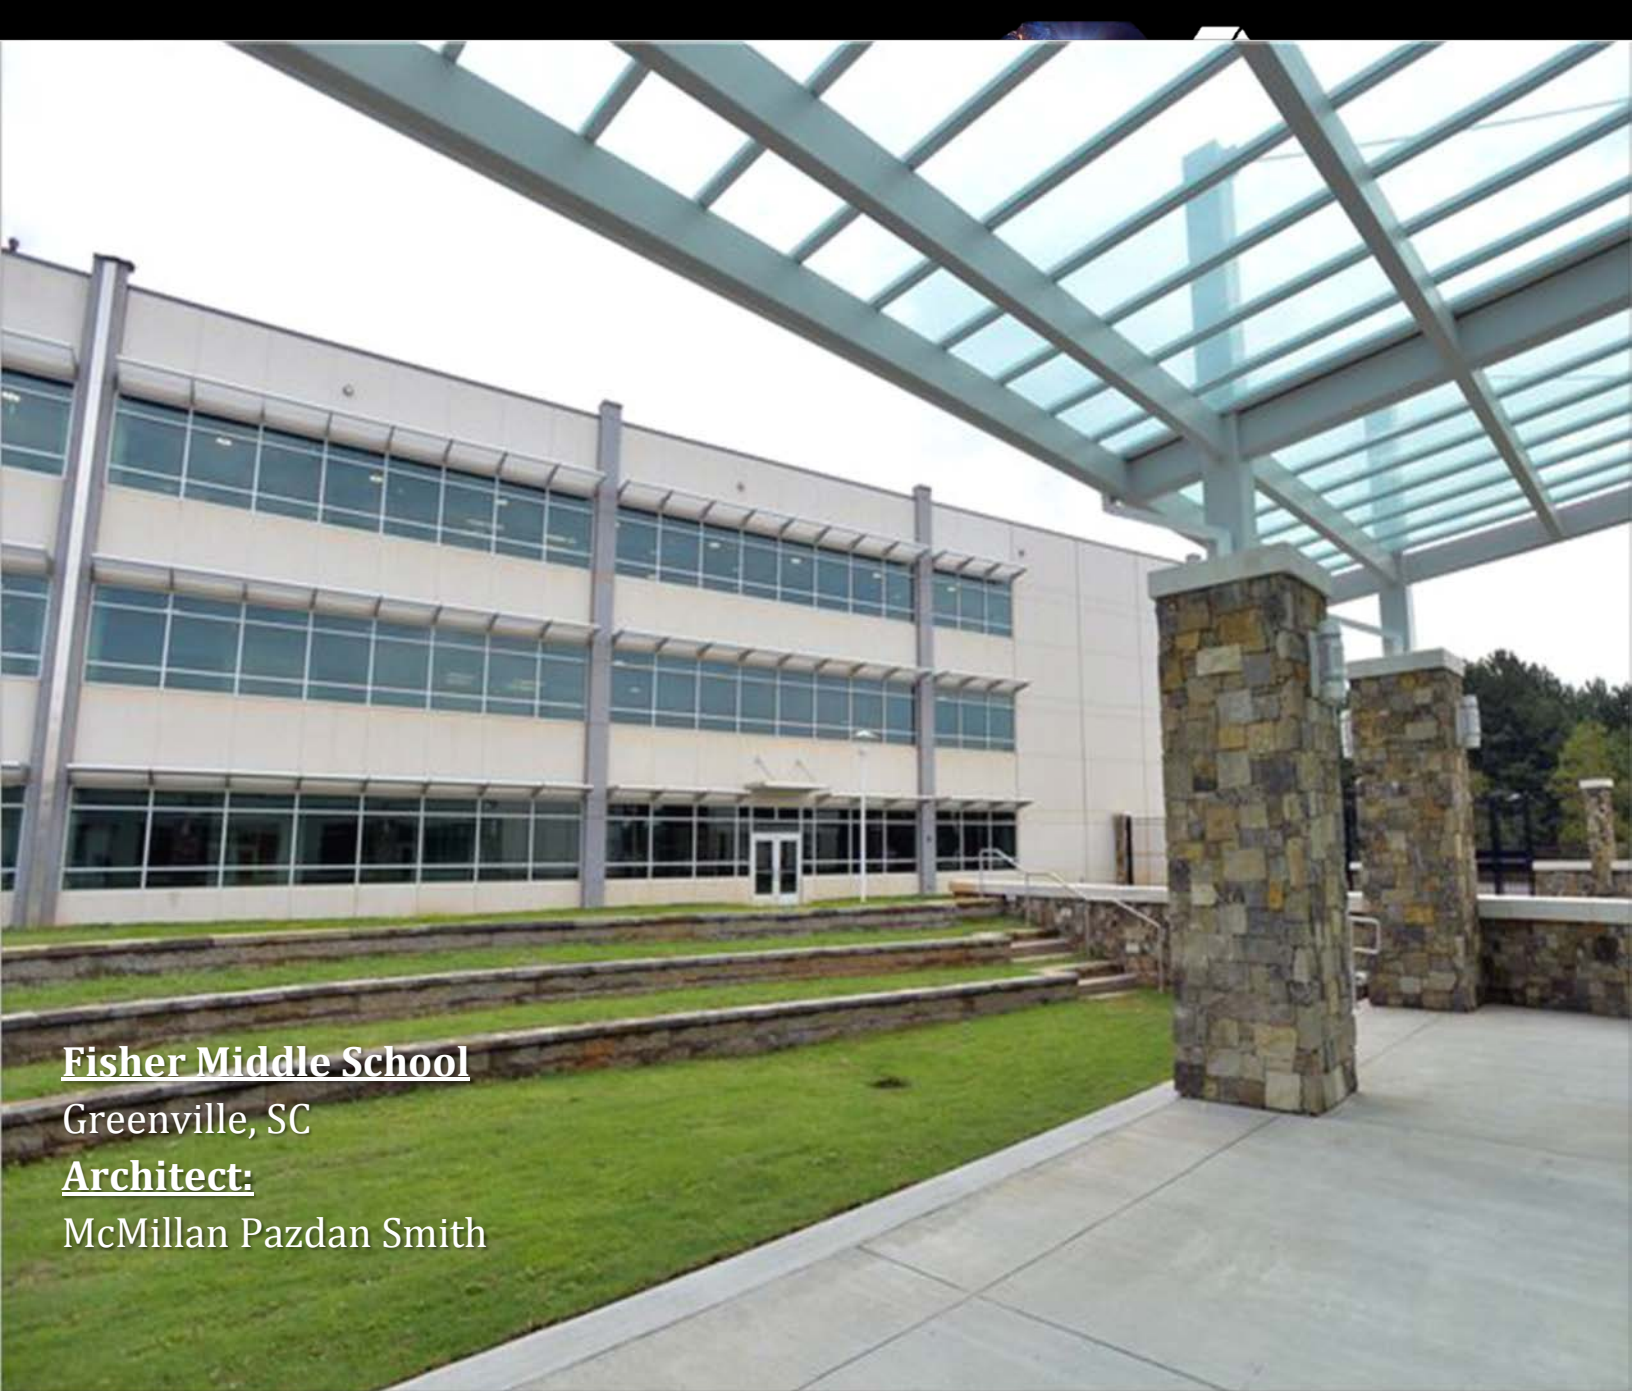

Our barrier panel system provides protection from air and moisture through our resilient designs. The panel system can be installed vertically or horizontally and provides a consistent joint appearance. For faster turn times, we can paint your project at our facility in a variety of standard and custom Kynar finishes that offer color longevity and top quality coating. BPS 100, BPS 200

Sunshades/Louvers Column Covers

Sunshades

Adding sunshades to your project not only enhances the energy efficiency of a building, but also adds an artistic aesthetic that captures the “wow” factor often sought in exterior architectural spaces..

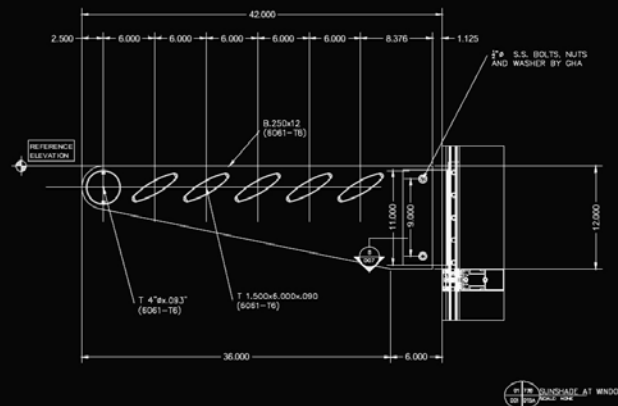

Louvers

Louvers act as a ventilation point allowing air to pass through while keeping out water, debris and dirt. The basic considerations for selecting louvers are open space, water penetration, and airflow resistance.

Column Covers

We offer ornamental column covers in aluminum and stainless steel. Can be used for various projects such as shopping malls, office space, retail outlets, medical facilities, church spaces and more. We can fab column covers up to 13’.

Custom Perforation

Custom Waterjet

Using our waterjet, we can create almost any pattern to fit your design in aluminum, stainless or galvanized metal. Perforated panels have a variety of applications, reducing the weight of the panel and giving you more control over airflow and sound reduction. Customize the look of your handrail, sunshades, grilles, fencing and panels with a unique perforation design.

We use aluminum and steel sheet material that is formed to the particular shape or design required by our customer. Common brake shapes include trim pieces, windowsills, window corners, perimeter trim, flashings, or accessories for installation.

American Metalcraft has fabricated engineered metal products since its inception in 1986. We are dedicated to meeting your design needs with the best products possible. In 2010, American Metalcraft moved into the Finishing Dynamics location. Together, we offer fabrication and metal finishing as one stop shopping for all of your project requirements.
