# AirCon – Future Perfect

## Ecotechnics ECK 1800

### STANDARD FEATURES

- Fully automatic
- High precision
- Refrigerant management giving usage report and archive
- Automatic leak check during vacuum phase
- Database for quick gas selection also allows to add new vehicle models
- Thermal printer inbuilt
- Bottle heater
- Automatic dye injection
- Refillable oil and dye containers
- Uses R134A gas

### TECHNICAL DATA

- 72 l/min. vacuum pump
- 12 l tank
- Compressor 1/3 hp
- 3 meter service hoses
- Refrigerant R134a

**£1,450.99**

251 77 0850

## Ecotechnics ECK 3500-UP

- 5" Colour display with icons for easy use
- Automatic taps, no more manual valves
- Automatic leak check during vacuum phase
- No-refillable containers, or fillers the advantage of eliminating contact with humidity
- USB port for easy data access
- Database for quick gas selection also allows to add new vehicle models
- Compatible with hybrid and electric vehicles with electric compressors
- Nitrogen leak testing (nitrogen

- bottle & regulator not included)
- Integrated diagnostics of electro mechanical problems with printout
- Uses R134A gas

**£2,159.99**

251 77 0840

## Robinair AC 595 PRO-UK

The AC595PRO is an automatic refrigerant management station. It automatically controls the recovery, recycling, vacuum and recharging process for oil, dye and refrigerant. As an entry-level machine, the AC595PRO is simple and time efficient to use.

Cabinet Inflatable rear tyres, front castors

Refrigerant tank 10 kg

Oil: 2x250 ml plus spare bottle

High performance dry filter: 300 cc

Hermetic compressor 1/4 hp 9 cc

Hoses 2.5 m standard

Working environment 10-50°C

Condenser Fan-cooled

Max operating pressure 16 bar

Recharging scale precision +/- 5 gm

Vacuum pump 2 stage 70 l/min., 2.5 cfm

Modes: Automatic/Manual

Integral printer

Uses R134A gas

**£1,899.00**

251 77 0710

## Robinair AC 690 PRO

The AC690PRO is a fully automatic refrigerant management station with complete 'programme and walk-away' capability. It automatically controls the recovery, recycling, vacuum and re-charging process for oil, dye and refrigerant.

The AC690PRO has an extensive, integrated vehicle database, user database, built-in vehicle-specific diagnostics facility and integral printer.

Cabinet: Inflatable rear tyres, front castors

Refrigerant tank: 10 kg

Oil: 2x250 ml plus spare bottle

High performance dry filter: 300 cc

Hermetic compressor: 1/4 hp 9 cc

Hoses: 2.5 m standard

Working environment: 10-50°C

Condenser: Fan-cooled

Max operating pressure: 16 bar

Uses R134A gas

**£2,499.99**

251 77 0900

## Brain Bee Clima 6000 Plus

- Extremely versatile, compact in size and lightweight
- Maintenance parts are easily reachable and accessible by non-experts/technicians, therefore minimising the machine downtime costs.
- Patented Heater Lock, Eco Lock and Long Life Pump
- Flush prepared with optional kit
- Nitrogen Leak Test with optional kit
- All components and manufacturing are exclusively of European origin
- Option of being able to be integrated with Agricultural & Work Vehicles
- Multipass capable, enabling additional closed circuit filtering of the recovered cooling fluid
- Uses R134A gas

**£1,399.99**  
251 77 0980

## Brain Bee Multigas 9000

- Delivers accuracy, flexibility, performance and efficiency
- Large storage capacity and great recovery with 10 m<sup>3</sup>/h vacuum pump and 14 cc compressor
- Added benefits of patented
- Eco Locks and Long Life Pump
- Fully automatic system of selecting Hybrid function
- Opel/Vauxhall OE software limits
- Flush prepared with optional kit
- All components and manufacturing are exclusively of European origin
- Option of being able to be integrated with Agricultural & Work Vehicles
- Nitrogen Leak Test with optional kit
- Multipass capable, enabling additional closed circuit filtering of the recovered cooling fluid
- Refrigerant 1234 Identifier with optional kit
- Uses R134A gas

**£2,259.99**

**Get 5 years super care for your AirCon machine with Autoclimate Plus and save your money**

**Just £49.99 + VAT per month**

**SERVICING:** We'll service your machine each and every year of your service contract (worth £1375 + VAT).

**WARRANTY:** We'll extend your machine's warranty for the 5-years of the service contract

**F-GAS ASSESSMENT:** We'll assess up to five people over five years (worth £1,000 + VAT)

**BREAKDOWNS:** Our team of Regional Engineers will move heaven and earth to be on site with you, within 2 working days\*

**AUTOCAT AIR CONDITIONING TECHNICAL CD:** You'll receive a copy of the latest Autocat Air Conditioning Technical CD

**SOFTWARE UPDATES:** Every time we service your machine we'll make sure you get all the latest software updates

**TELEPHONE SUPPORT:** Our technical support team is just a phone call away to help you, but if the problem's a bit bigger they'll arrange for an engineer to visit

**TRAINED ENGINEERS TO SUPPORT YOU:** Our engineers are fully trained and they receive regular updates on the latest products and safety standards

**OE PARTS:** We keep a full range of OE spares in stock, so when we diagnose a problem over the phone, we can send the parts to your site before our engineer arrives

**Please contact your local branch for more details**

\*Except of General wear and tears: Hoses, Seals, Couplers, and Rear Wheels, Front castors, Panel Valve Knobs, uses, Oil Bottles and fittings

Auroclimate Plus offer is available for machines purchased from Euro Car Parts, new ones and existing machines purchased from Euro Car parts is less than 12 months

# Compressors

## The Heart of the AirCon System

Euro Car Parts offer 2 types of Compressor:

- **New Units:** An OEM brand new unit
- **Remanufactured Units:** An OEM unit, remanufactured to the highest standards

When replacing a compressor always replace expansion valve/orifice tube, condenser, receiver drier/accumulator. Ensure that the system is free of all debris.

Changing coil springs in pairs is the only safe way to maintain the vehicle's original driving features.

You should make your customers aware that replacing only a single spring can cause accidents, and that to be safe rather than sorry, both coil springs on an axle should be changed together.

As shock absorbers are probably the same age, replace these as well at the same time along with any other components such as Top Mounts, Bump Stops & Dust Covers.

### Why Renew Coil Springs:

- Takes the car back to as new condition & Correct Ride Height
- Keeps the tyres in contact with the road surface
- Better road holding & cornering
- Better wheel alignment
- Helps increase the life of the shock absorber (unless shock absorber is worn)
- Coil Springs need to be changed when they are damaged, sagging due to age, snapped or broken

# SHOCKS

Never change a single shock absorber. They should at least be changed in pairs (both front and both rear). If replacing OEM shock absorbers, then changing all four is recommended.

Vehicle control and reducing wear on the rest of the suspension are the primary jobs of shock absorbers. Providing a comfortable and pleasant riding experience is actually a by-product of shock absorber function, not the object. Comfort and handling come from the overall design of the vehicle and its entire suspension system.

# Xtra Drilled Discs

Xtra drilled discs are a performance range from Brembo. They have designed a specific drilled pattern which has an attractive aesthetic look and is enhanced by the exclusive UV painting and high carbon content. They boast brilliant and efficient performance in any braking conditions, in order to emphasise the driving style of true enthusiasts.

The holes disperse gasses created from high temperatures to reduce fading. The greater air circulation allows effective cooling of the braking surfaces. The holes also aid the cleaning of pad deposits and also help maintain braking in wet conditions by removing the build-up of water on the disc.

The number, dimension, shape and position of each hole are specifically designed and tested for each individual disc of the Xtra range. This brake disc can be used with a standard brake pad or combined with an upgraded street brake pad.

Price per disc (Must be purchased in pairs).

# TURBO

## NEW TURBO'S

**2yr**  
Warranty

All our NEW Turbochargers are factory fresh, first fit products, straight from the original turbo manufacturer's production line. They're exactly the same as you'd buy from a main franchise dealer, but competitively priced.

## REMAN TURBO'S

**2yr**  
Warranty

All turbochargers undergo the same intensive remanufacturing programme, involving complete strip down and thorough cleaning using pyrolytic technology. Bearings, piston ring seals and bolts are automatically replaced; most of our turbochargers are fitted with high capacity thrust bearing assemblies to ensure maximum durability and service life.

# CLUTCH CLINIC

## Dual Clutch Transmission is coming your way

Millions of vehicles are now operated by twin clutch systems

### Are You Ready?

Direct Shift Gearbox has now been on the market since 2003 in 2 different formats. The earlier type is known as a "WET TYPE" 6 speed clutch as it runs immersed in Gear oil. The requirement to change this type of clutch is small as it rarely wears out.

The later type is known as a "DRY TYPE" clutch as it resembles a traditional clutch plate assembled in a steel cartridge.

Both Types of Gearbox operate in a similar way; having two input shafts (One Solid, running down the centre of a hollow Shaft). The Solid shaft runs gears 1, 3, 5 & 7. The Hollow shaft runs Gears 2, 4, 6 & Reverse.

The Clutch kit is running both plates and switches from one to the other in drive terms within a few milliseconds, making the gear change very smooth and swift.

As the "WET TYPE" clutch rarely needs changing, these are not usually available in the aftermarket, and training for this type of clutch is not yet available. However, the oil MUST be changed every 40,000 miles.

The "DRY TYPE" clutch requires specialist training available through Euro Car Parts and LUK, this training comes as an IMI certificated course. Specialist tools are also required, all available from Euro Car Parts.

Both types are used in conjunction with a DUAL MASS FLYWHEEL. This DMF fails with the same regularity as a normal DMF, and can be easily changed by plugging both "Breathers" (oil MUST NOT be lost during this procedure), and removing the Gearbox.

The Clutch kit is pressed onto the input shaft in both cases and is not bolted to the DMF. The "WET CLUTCH" is driven by a short, splined, stub shaft in the centre of the DMF.

The "DRY CLUTCH" is driven by way of a Toothed Cog around the middle of the DMF. As long as the Clutch Kits are not disturbed, replacement of the DMF is an easy operation.

If the Clutch is removed, then it MUST be replaced with a new kit. Replacement clutch packs containing all the parts required are available now for the VAG DSG Gen 1 and Gen 2, Ford Power-shift and Renault EDC, training is available for all these clutch systems.

# Timing Belt Kits

I  
INA  
A

## Pump Up Your Volumes!

The water pump has become an important routine replacement item largely because it is a part of the timing belt drive system. Vehicle manufacturers and timing belt suppliers both recommend replacing the water pump plus the tensioner and idler pulleys during the belt change service to help ensure that all components achieve their optimum life expectancy.

Effectively, the water pump is an important rolling element of the primary drive system, and fitting a new timing belt to either a worn pump or damaged pulley will obviously lead to premature failure and the possibility of major engine damage. Also, it is more cost-effective to invest in a new water pump when the timing belt system is replaced.

INA now offers the 'KIT+', containing all of the components needed to carry out a complete system replacement, including the Water Pump. Every KIT+ water pump is brand new and OE quality, never remanufactured, with absolutely no surcharges attached, featuring high grade Hard Carbon / Silicon Carbide (HC/SiC) seals. All of the components in a KIT+ box have been precision matched to guarantee a speedy, smooth and hassle free fitment.

# TECHNICAL TIPS FOR INSTALLERS

Before installing your new KIT+, make sure the belts are a match (with the same tooth profile and number of teeth) and check the pulley flange height with that of the old pump. If the height isn't correct, the drive belt system will be misaligned and could lead to component failure. To ensure the pump has the correct rotation, compare the impeller for similarity of configuration and size. Also, make sure that all remnants of the old gasket or sealant have been completely removed from the engine block to maintain the correct fitting tolerances and, of course, prevent leaks. When all dimensions and clearances have been checked, fit the water pump in accordance with the VM guidelines, using the correct specification of coolant.

Leaking seals are the largest cause of pump failure, so it is important to inspect the cooling system for the presence of abrasive particles and other corrosive contaminants, flushing and refilling with the correct specification coolant as necessary. To prevent damaging the new water pump seals, make sure that the engine is filled with coolant to the correct level before starting the engine. To prevent potential damage from thermal shock, allow the engine to warm until the coolant has fully circulated through the radiator and all air is bled from the system. Lastly, inspect for any leaks and make a final check of the coolant level before releasing the vehicle to your customer.

## Tech-tips:

1

Both vehicle manufacturers and INA engineers recommend the replacement of all ancillary drive components when replacing the timing belt. This includes the fitment of a brand new water pump if it is part of a belt driven system.

The original water pump may have a damaged pulley, seized pump shaft or worn bearings which could be the cause of the initial problem, and just fitting a new timing belt without replacing the faulty pump and pulley system will once again lead to premature belt failure.

2

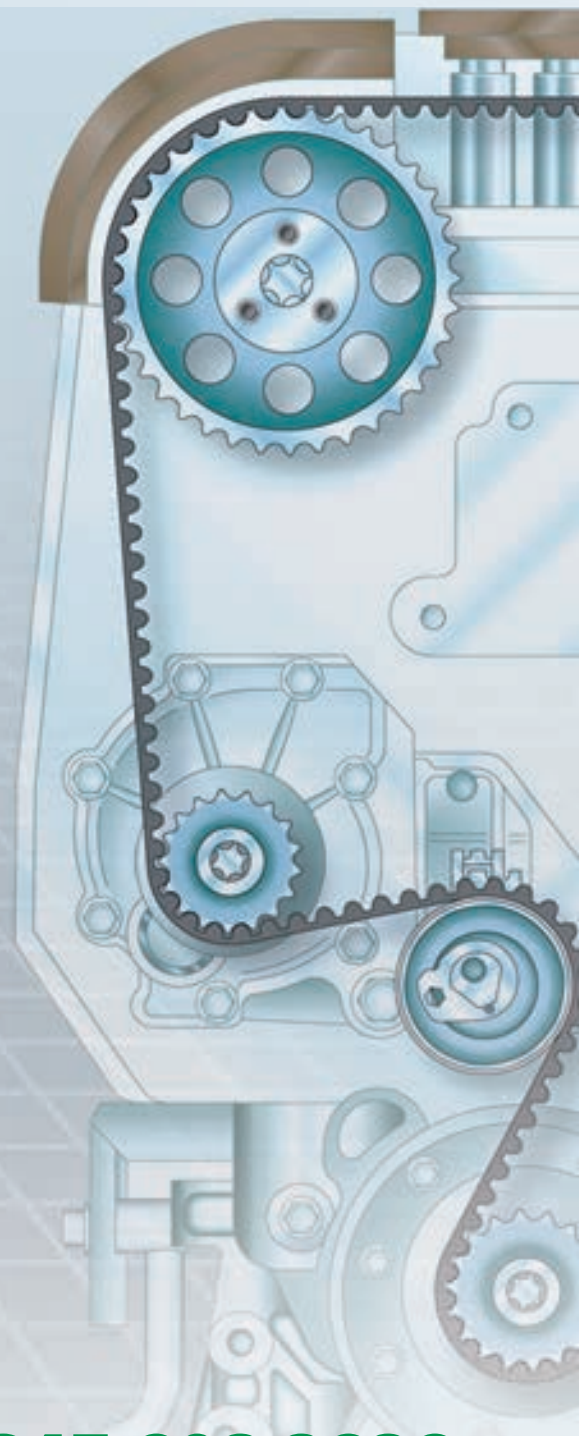

If the Timing Belt replacement involves any interference with the Front End Auxiliary Drive (FEAD) system, vehicle manufacturers are now also recommending the replacement of both the auxiliary drive belt and all system pulleys (including the OAP/OAD if fitted) to ensure that all replaced components achieve their optimum service life. This does make overall economic sense, as the cost to the customer is limited to just the parts if performed as part of a timing belt route replacement.

Also, the auxiliary drive belt has been fitted to the engine for the same length of time as the timing belt being replaced, and has therefore been subjected to the same stresses and strains. As modern poly-v belts are of a similar construction and material specification to the timing belt, it is obviously a sensible solution to replace this engine critical component at the same time, rather than risk possible future failure which may also cause expensive collateral damage to the newly fitted timing belt system.

3

A small amount of coolant may 'weep' from your newly fitted water pump.

This is a normal occurrence which can happen until the ceramic seal pack fully beds in.

## Driveshafts Oil Seals

An oil seal is a very simple component but essential for vehicle functionality. The standard design seal mainly comprises of a metal insert, rubber layer and spiral spring. Its key function is to prevent engine oil leakage. Only if the seal is correctly designed and produced to the OE specifications, will it maintain long life performance.

**14 Piece Inj Extractor with Slide Hammer  
Delphi Bosch Denso Siemens**

Masterpro

**£99.99**

538 77 1981

This tool set includes keys and deep open profile sockets which can be used to dismantle injectors, plus adaptors for attaching the sliding hammer securely to the body of the injector Ball joint allows hammer to be used in confined areas

**Single Wheel Skate Aluminum Light  
Weight Hydraulic 680Kg Capacity**

Masterpro

**£79.99**

538 77 3890

The 12" Hydraulic wheel skate jack offers a low centre of gravity to make it safe to move any vehicle safely with great stability. It's the mechanical foot pedal that hydraulically lifts the tyre and thus the car without touching the frame.
