• Perfect for storage of supplies, tools, bins, equipment, gear, products, canisters, boxed, etc.

Shelves are box formed at front and back allowing high capacity storage with minimal deflection. Sides of shelves are triple flanged adding to shelf strength. Compression shelf clips improve overall unit capacity. Posts are punched to allow shelves to be adjusted top to bottom at 1-1/2" on center. Beaded front posts allow use of full shelf width and are common between adjoining units reducing assembly and installation time as well as reducing cost. Angle back posts can be bolted together when joining units side-by-side or back-to-back. Side and back sway braces eliminate unit sway providing a safe storage solution. FOB Shipping Point.

Starter Units Include: Two front beaded posts, two angle back posts, one pair of back sway braces, two pair of side sway braces and shelves with shelf clips applicable to unit ordered.

Adder Units Include: One front beaded post, two angle back posts, one pair of back sway braces, one pair of side sway braces and shelves with shelf clips applicable to unit ordered.

Pallet Rack Step Beams

Our Roll-Formed Tear-Drop Beams utilize a "Step" indentation on the inside of every beam that allows for wire decking or crossbars. Beams have a tubular design and continuous seamless weld. Connector plates use 9 ga. steel with either 3 or 4 shaved buttons depending on the length. Each beam has a pre-installed safety clip that automatically locks into place once the beam is connected to the frame. It provides exceptional protection against any damage, tampering, and accidental disengagement. Orange powder coat finish. FOB Shipping Point.

Unirak Wire Mesh Decks

- **Decking is a valuable safety accessory.**

Decking is available in multiple sizes, made of HD Wire Mesh, with 3 to 4 welded channels, (24" and 36" deep are flared, 42" and 48" deep are cut channel style), that supply 2400 to 2500 lb. capacity per deck. Decking is a valuable safety accessory used in combination with typical GMA style pallets (sized with at least 3" of overhang front and back), prevents misplaced "turned" pallets from falling through. No wire deck, from any manufacturer, should be used in instances of point loading, inboard loading, or live loading -- consult dealer/factory for special applications and recommendations. Buying from one source minimizes freight expense and permits just one PO. FOB Shipping Point.

Indicator™ Bins

- **Increase efficiency and productivity with this storage solution.**
- **Perfect for industrial, healthcare, manufacturing and retail.**

Effective inventory control at a glance. These bins simplify visual recognition when supplies need to be replenished. An innovative, low-cost alternative to high-end inventory control systems. Simply stock the Indicator™ Bin using the divider to designate volume for inventory reserve. Pick from the blue or black side of the bin until you reach the divider, then flip the bin to the orange or red side to indicate that inventory levels are low. Bins with low inventory are instantly recognized and can be immediately refilled. Each bins has a large label area. FOB Shipping Point.

Universal Hanging Bins

- **Rear hanglock allows bins to tilt out on steel or wire shelving units.**
- **Bins nest when empty.**

Bins feature a full-rim hanging cleat design that allows the bin to be hung from a louvered panel by any of its four sides, and from rails by two sides. Bins are sized to fit evenly across standard-sized wire and steel shelving units providing added utility for optimizing storage spaces. Hanging the bins from the back creates a sloped picking bin, keeping parts visible and accessible. Hanging the bins from the front creates a standard bin profile, and the bin can be filled to capacity. Users can convert their storage space from a hanging-style bin to a shelf bin-style setup without having to purchase additional bins. Available in Red, Yellow and Blue -- please specify. Also available in Clear -- call for prices. Optional dividers and clear bin lids increase storage options. FOB Shipping Point.

Bulk Containers

AKRO-MILS
A Myers Industries Company

• Bulk Container Selection Guide

With all the styles, sizes, and options available with bulk containers, it can be a challenge to choose the right one for your application. This guide will help you through the process by providing you with the basic information needed to select a container, including details on construction, weight capacities, drop doors, stackability, and other features. For more assistance, call us.

• Bulk Box Capacity Guide

Medium Duty: 1500 pounds or less. Versatile container group suited to handle a majority of storage requirements and transportation demands.

Standard Duty: 1501-2000 pounds. Typically used to transport dense industrial parts and automotive components in high volume applications.

Heavy Duty: 1800-2500 pounds. Recommended in demanding situations with heavy, free flowing loads and/or in a rough material handling environment. Features steel reinforcement in high impact areas coupled with a unique wall locking design.

• Purchase Considerations

Compatability: Will the container need to stack with others that are already in your, or your customer's plant?

Stackability: Will you be stacking one full container on top of another? Note the stacking height restrictions.

Return Ratio: Some containers fold down to a lower height than others, saving space and freight charges on return trips. Example – 3:1 ratio means 3 collapsed units equal the height of 1 erect container.

Collapsibility: Don't need to collapse a container? Choose from numerous fixed height models.

Drop Doors: These are the small fold down doors on some of the walls. They allow easy, ergonomic access to contents.

Latch Style: Some containers offer snap-lock style latches to easily open and close drop doors and to easily collapse walls. Heavy duty models offer post & pocket latches that are less prone to damage.

Lids: Optional lids protect contents from dust and damage. Containers can be stacked with or without the lids.

Special Conditions: Always consider testing a container under actual conditions to determine suitability.

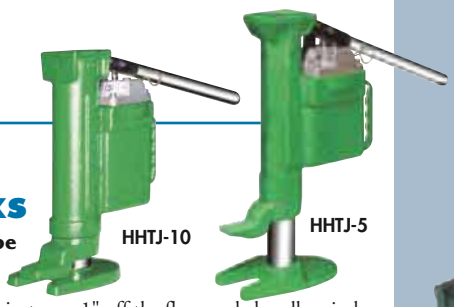
LOAD MOVERS



Hydraulic Toe Jacks

• The perfect choice for lifting loads to be moved on rollers.

Available in capacities of 5, 10 or 25 tons.
Provides the capability to jack-up loads that are just over 1" off the floor and also allow jacking from the top of the cylinder which extends the lifting range. HHTJ-5 & HHTJ-10 can be operated either vertically or horizontally and an internal pressure valve prevents jack overload -- HHTJ-25 cannot be operated horizontally. Base, toe and pump assemblies swivel independently to enable precise positioning in tight quarters. Each has an integral carrying handle for easy portability. Meets ASME B30.1 standards. Covered by manufacturer's 1 year warranty. FOB Shipping Point.

Aerosolv® Aerosol Can Disposal System

- **Provides a solution to the expense of solid waste disposal of aerosol cans.**
- **Complies with EPA regulations 40CFR261.23(a)(6).**

H28225
Aerosolv® Counter makes it easy to count and record the number of aerosol cans punctured.

RCRA regulations require that, unless relieved of pressure, aerosol cans must be packed in a drum and manifested for solid hazardous waste disposal. With Aerosolv®, cans are not solid hazardous waste, but are fully recyclable. Residual liquids, released by Aerosolv® and collected in a drum, may be eligible for reclamation or recycling through a waste handler, resulting in waste minimization credits. 55 gallon drum will collect the contents of over 4000 spent aerosols. Easily operated by hand. With the press of the handle, puncture pin pierces the can – leaves no sharp edges or crushed metal. Made of aircraft aluminum, requiring no maintenance. Filter comprises a coalescing lower portion, which removes airborne organic compounds and an activated carbon upper portion which absorbs odor. FOB Shipping Point.

Hydraulic/Foot Operated Stackers

- **Useful in transporting pallets between narrow spaces and walkways.**
- **Swivel handling with creatively designed plated handles.**
- **Load capacity up to 1322 lbs.**

Easy to operate in entrances and exits and in buildings with low ceilings. The rigid casters have urethane wheels, and the swivel casters have rubber wheels with brakes on both sides. Strong and light-weight mast and fork design uses tensile strength steel. Fork width is easy to adjust and the new structure of the mast prevents fork vibration. Comes with an overloading prevention valve. Equipped with a rapid traverse device (attached to the **HH200**). Equipped with a springback mechanism in the release handle. Airfloat Utility Platform

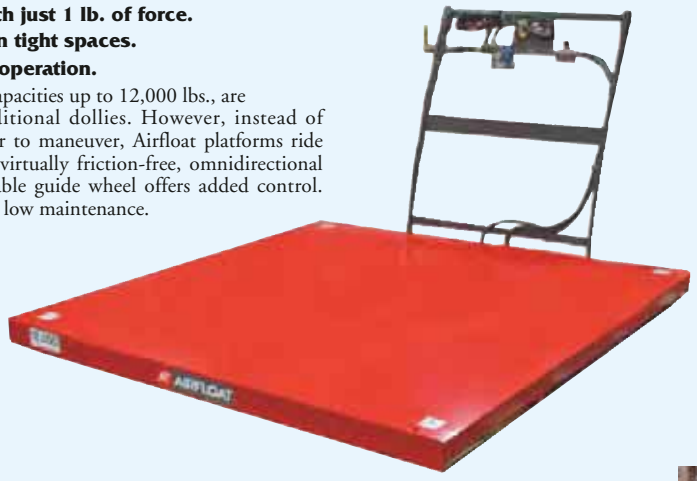
- **Move 1,000 lbs. with just 1 lb. of force.**
- **Able to maneuver in tight spaces.**
- **Easy "grip and go" operation.**

Utility platforms, with capacities up to 12,000 lbs., are utilized much like traditional dollies. However, instead of wheels, which are harder to maneuver, Airfloat platforms ride on a cushion of air for virtually friction-free, omnidirectional movement. The retractable guide wheel offers added control. Few moving parts means low maintenance.
FOB Shipping Point.



AIRFLOAT

How Air Bearings Work

Airfloat uses a flexible urethane diaphragm beneath the load support surface. Air is pumped into the diaphragm and passes freely through tiny holes on its underside, raising the platform off the ground. The air that is forced out between the diaphragm and the ground forms a continuous flowing film of air, allowing virtually friction-free movement in any direction.

Lifting WEBBING SLINGS

- **Pro-Edge® is the new "standard" for the web.**
- **These strong webbing slings ensure worry-free lifting of heavy loads. Polyester standard. Nylon available - call for pricing.**
- **Extremely strong and wear-resistant, yet soft enough to handle even delicate surfaces.**

Pro-Edge® is 50% tougher than standard webbing. The edges are made with high tenacity twisted tire-cord yarns. It is a scientific fact that twisted yarns are more resistant to cutting and abrasion than untwisted yarns. Since these twists are part of the yarn construction, the cut and abrasion resistance properties of the yarn will not go away after standard wear. Pro-Edge® maintains its strength far longer than most other webbings. Superior abrasion resistance is achieved by controlling the shrink process through a special heat-setting process. This is the same process that produces exceptional abrasion resistance in the manufacture of seat belts. Most other webbings do not use a special heat-setting process but instead dry the webbing using blowers...resulting in less uniform elongation of fibers. Simply put there is not a higher quality "standard" webbing available on the market. Polyester standard. Nylon available -- call for pricing. All slings are measured end to end including eyes and/or hardware. FOB Shipping Point.

Permanent Lift Magnets

LIFT MAGNET GUIDELINES:

Surface Condition: Magnet face and load surface must be clean and smooth. Capacity ratings listed are on flat, clean and polished steel plate with magnet face in full contact with the load surface. Paint, coatings, scale or other materials between the load surface and the magnet will adversely affect the holding power of the magnet.

Material Thickness: Lifting capacity is lower on thinner materials. Contact dealer for more capacity information.

Material Composition: Magnet capacity is based on lifting low carbon steel. Other materials may reduce lifting capacity.

Load Size and Position: Thin sheets, rough and irregular surfaces, odd shapes and scale all affect holding power adversely and must be considered in establishing a safety factor. The magnet must be positioned on the load center of gravity. Tilted or unbalanced loads significantly affect the holding power of the magnet.

Capacity: Maximum attractive force is approximately twice the rated lifting capacity. Capacity ratings listed are on flat, clean and polished steel plate with magnet face in full contact with the load surface. The above factors should be taken into account when determining appropriated safety factors for a given load. A minimum of 2 to 1 safety factor must be applied based on the actual breakaway force for a given load. **Refer to ASME Standard B30.20 for inspection and operating procedures of Close Proximity Operated Lifting Magnets and read Manufacturers' Operating Manual before using magnet.**

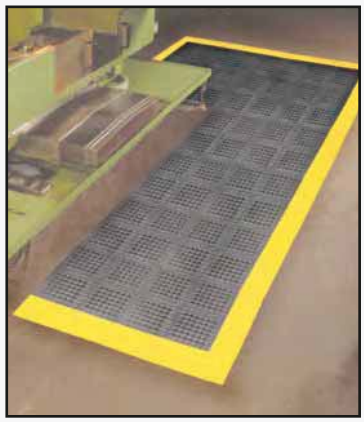
Diamond Flex-Lok™

- **True ergonomic support and comfort with the durability of an industrial safety mat.**
- **PVC compound construction is highly resistant to most chemicals, oils and greases.**



Intelligently designed for wet environments where anti-fatigue, drainage, and slip resistance are all a priority. Modular matting system can easily accommodate on-site custom configurations. A permanent interlock system ensures that the mats will not come apart, eliminating the need for the use of potentially harmful adhesives. Multi-tiered footing design elevates mat off the floor resulting in air pockets that allow the mat to flex with the weight of the worker, resulting in less fatigue and easy clean-up. Large drainage holes facilitate removal of debris from the work area and eliminate clogging. A pronounced raised diamond pattern enhances slip resistance. Interlocking, inverted "V" pattern beveled ramps can be attached to mats to eliminate trip hazards. Sorbent pads can be easily placed under matting in extremely wet environments for an extra measure of safety. FOB Shipping Point.

tennsco™ Storage Made Easy

Lateral Files

HLPL3672L60

Heavy gauge welded steel construction ensures rigidity and durability for many years of use. Files will accommodate letter or legal hanging files. A mechanical interlock system prevents more than one drawer from opening at a time to eliminate the danger of tipping. Drawers and shelves glide on heavy duty, full extension ball bearing suspensions. A single lock controls all openings. Locks are core removable and master keyed (order keys separately). Each opening is equipped with side-to-side hang rods for the folders. Optional front-to-back rods (H15CR) are available.

Drawers and doors have easy grip, full-width pulls with recessed label holders. Four leveling glides allow the unit to be leveled on uneven floors. To reduce risk of tipping, order two drawer lateral files with counterweights (suffix "W") for all applications except under a work surface in a workstation. Five and six-high units have retractable door(s) with roll-out drawer on top opening(s). Choose an optional laminate top to create a work surface on two and three-high files. Specify Oak or Walnut. Durable powder-coat paint finish available in five colors. FOB Shipping Point.

Little Giant® Aerial Safety Cage™ Adjustable Enclosed Platforms

- **Replaces expensive power lifts and works over uneven surfaces, stairs, etc.**
- **Meets OSHA tie-off/enclosed work platform rules - rated Type IA - 300 lbs.**
