

3 Simple ways to identify the correct Catloc for your requirement:

Bespoke Fitment

Just check on the following pages to see if your vehicle is listed. If it is it will have a unique CAT code listed against it [example: CAT1011 - Iveco Daily Euro4 & Euro5]. This is a bespoke fitment for your vehicle. Please ensure you have the correct emissions system, engine size and transmission where applicable.

Universal Fitment

Assuming your vehicle isn't listed as a bespoke fitment, we are confident one of our universal fitments will be suitable. Please ensure there is clearance around the catalytic converter or particulate filter and a suitable location to secure steel ropes is identified prior to purchase.

➔ Clamshell shaped catalytic converter

Our CAT1001 will fit most clamshell shaped catalytic converters up to 203mm wide and 152mm tall.

➔ Round catalytic converter/diesel particulate filter

The CAT1002 can accommodate units with a circumference (measurement around the outside of the unit) between 406-508mm. If your unit is larger the CAT1002XL is most commonly suitable for units with a circumference between 495-609mm.

Catloc Marking & Registration System

If the catalytic converter or particulate filter is too difficult to reach, or to install a security device to, you can always utilise the Catloc Marking & Registration System to securely mark and register the vehicle.

If you have any difficulties in identifying the correct Catloc solution or for any reason are in any doubt, please contact us with the vehicle's make/model and registration or Vin number, and we can provide further guidance on which Catloc solution is most suitable.

VEHICLE DETAILS				OBD REF
MAKE / MODEL	YEAR	EMISSION SYSTEM	ENGINE	
CITROEN				
Dispatch	2007>	Euro 5	2.0HDI	CAT1018
