Human Form, Human Function

T. McConnell, K. Hull

Human Form, Human Function is the first essentials level text that seamlessly weaves together form (anatomy) with function (physiology), an approach that caters to how instructors teach and students learn.

Real-life case studies are incorporated as the vehicle for learning how form and function are linked. Through careful organisation, thoughtful presentation, and a conversational narrative, the authors have maintained a sharp focus on communication: between body organs and body systems, between artwork and student learning, between content and student comprehension.

Measurement and the Measurement of Change

D. Polit

Ideal for health professionals who develop new instruments, adapt existing ones, select instruments for use in clinical trials or in clinical practice, interpret information from measurements and changes in scores, or undertake a systematic review on instruments, *Measurement and the Measurement of Change: A Primer for the Health Professions* provides a “gentle” introduction to and overview of complex measurement content that helps ensure high-quality science and excellence in clinical practice.

While the book assumes a basic understanding of statistics and statistical inference, the statistical content serves to enhance conceptual understanding rather than to guide computations. This highly practical book draws on measurement theory and approaches from a variety of fields and includes recent advances from psychometrics, clinimetrics, and other fields not offered in other health measurement books.
