# Solid Flywheel Conversion Kits

**C**onversion kits offer a high performing aftermarket alternative to the DMF which matches its performance over its lifetime. This aftermarket innovation is celebrating over 10 years of success.

The conversion kit design is composed of a rigid flywheel - with no wear parts - after eliminating the need the flywheel has been replaced. In order to provide the same clutch function, maximum engine torque transfer and full gearbox protection, conversion kit contains a clutch kit specially designed clutch disc with long travel damper (LTD) technology, which is widely used by most of the major clutch manufacturers as original equipment. This enables DMF to Solid flywheel conversion ensuring the level of filtration of engine noise and vibration was maintained by the LTD disc.

Recent conversion kit developments cover great applications such as, BMW 1,3,5 Series, Vauxhall Corsa, Meriva, Combo 1.3CDTi, Agila, Citroën C2,C3,C4,C5, Xsara Picasso, Ford Mondeo III 2.0D, 2.0TDi, Suzuki Swift, Ignis II, Volvo S40, Mistubishi Carisma and Audi A3 & TT.

ECP has the largest conversion kit references in range, covering more than 5.5 million vehicles in UK. Thanks to long travel damper disc, conversion kit is an economical alternative solution to a DMF.

## KEY BENEFITS OF SOLID FLYWHEEL CONVERSION KITS:

- Economic alternative
- Extremely reliable solution providing full gearbox and engine protection
- Increased durability and clutch life thanks to low wear and tear, and better thermal resistance
- 100% torque transfer in all drive conditions providing an important safety factor
- Comfortable solution with high filtration of vibration and noise to enhance driving pleasure
- Reduced labour and optimized serviceability thanks to the Service Kits
- Easy to fit, same installation and fitting time as DMF and the associated clutch kit

# SUSPENSION STRUT MOUNTS

*Suspension strut mounts are a part of the suspension system and form the link between the suspension strut and vehicle body. Worn or damaged suspension strut mounts can lead to reduced driving comfort and an increased strain on the whole suspension system – even with new shock absorbers. Damaged suspension struts and mounts can cause a safety risk. The braking distance is extended, road contact is decreased and your handling ability deteriorates.*

*CORTECO supplies a large quantity of its suspension strut mounts for new applications of premium cars.*

## WHY CHOOSE CORTECO:

- Suspension strut mounts in OE quality
- Constantly developing range
- Able to supply the developing trend for singles rather than pairs

## Ceramex **A high quality, professional DPF cleaning service. The winning alternative to high-cost main dealer parts.**

Ceramex unique inspection technologies provide vital evidence of the quality of cleaning and give reassurance that the cleaned DPF will perform as well as a new part and the customer will obtain following benefits:

- The Customer is getting the same unit back - No fitment issues
- It is cost effective – And an alternative to Main Dealer prices
- Patented 'XPurge' cleaning process removes 98% of Ash and Soot
- Every DPF is tested before and after the Cleaning process and comes with a Filter Condition report that highlights the Airflow and the amount Soot/Ash removed in grams.

# DPF AND CATALYTIC CONVERTERS

The REACT range of catalytic converters is the largest available 'off the shelf' in the UK. It consists of over 2,500 part numbers and covers over 98% of the vehicle parc. This is a premium product that covers both type-approved and non-type-approved applications. Also in the REACT range are over 200 DPF references covering all of the popular applications

# Exhaust Gas Temperature Sensor

The Exhaust Gas Temperature Sensor (EGTS) is located in either the front of the Diesel Catalyst and depending on vehicle manufacturer it can also be located in front of the Diesel Particulate Filter (DPF) this sensor detects exhaust gas temperature and converts this into a voltage signal. This information is then sent back to the engine ECU with the voltage signal in order to control engine conditions to effectively reduce emission. Higher engine temperatures can cause premature engine wear and in some cases engine failure.

# EGR Valve

Exhaust gas recirculation (EGR) is a nitrogen oxide emissions reduction technique used in petrol and diesel engines. The EGR valve works by recirculating a proportion of the engines exhaust gas back in to the engine cylinders, this vastly increases efficiency whilst the engine is cold and, results in a cleaner, more complete burn of fuel.

The Exhaust Gas Recirculation (EGR) Cooler uses the engines coolant to help reduce exhaust gas temperatures prior to recirculating them through the engines intake system. The EGR Cooler prevents damage to expensive components downstream in the exhaust system, like the turbocharger, and prevents the build-up of pollutants due to excessive temperatures.

# DPF Sensor

At Euro Car Parts we have a market leading product range on Diesel Particulate Filter (DPF) sensors. We can offer sensors from all of the major manufacturers including OE brands such as Bosch and also replacement brands such as FAE, MTE and Haas. We can also offer sensors that were previously only available from the vehicle manufacturer dealer.

# Secondary Air System

The Secondary Air System adds oxygen to the exhaust system gases to assist in the final "burn off" of the emissions. Fresh air is pumped into the exhaust by either an electrical/mechanical pump or a one-way valve.

The Secondary air system is commonly used during the warm up cycle to help burn the rich air-to-fuel mixture needed to run a cold engine. After two to three minutes of running the catalytic convertor is close to operational temperature. After this period the secondary air system shuts down.

# Lambda Sensors

The Lambda Sensor is a key component of a vehicle's engine management system and also prevents damage to the catalytic converter. The Lambda Sensor is located in the exhaust system and measures the amount of unburned oxygen in your engine's exhaust. Based on the amount of oxygen, it sends a signal to your engine computer which then adjusts the air/fuel mixture for optimum engine performance and emission control.

## Rear Bush Installer – VAG

**59.95**

LAS4188

- This tool is essential for replacing the bonded rubber plastic rear axle mounting bushes fitted to VAG vehicles, without removing the rear axle assembly from the vehicle
- It's thrust bearing allows the bush to be fitted quickly and easily without causing damage
- The drive screw and nut should be lubricated before and after every use
- Applications: Primarily for use with Audi A3, Volkswagen Golf IV, Bora 1.4 1.6 1.8 2.0 and 1.9D (01-03)

## Suspension Bush Remover/Installer – VAG

**119.95**

LAS4748

- This bush removal tool is designed for the rear bush on the front wishbone (Console bush)
- Applications: Volkswagen Polo, Fox, Seat Cordoba, Seat Cordoba, Skoda Fabia - All 02-07 Seat Ibiza 02 onwards after Chassis 6K-2-000 001)

## Rear Suspension Upper Bush Tool

**£69.95**

LAS5978

- Application: Range Rover L322 2003-2012, Discovery 3/4, Range Rover Sport
- The Lower Hub Bush Tool (LAS5077) and the Upper Hub Bush Tool (LAS5978) have been developed to allow the technician to remove and refit these rear suspension bushes with the minimum of dismantling required.

## Rear Suspension Lower Hub Bush Tool

**£89.95**

LAS5977

- Being able to perform the task on the vehicle saves considerable time over the more traditional use of a workshop press and the requirement that the hub be completely removed.
