INNOVATIVE SOLUTIONS

About Us

Since its beginnings in 1997, Vista Dental has produced quality dental products which offer superior clinical results. With our "Mountains Above the Rest" commitment to quality, creative product development, and impassioned commitment of its employees, Vista has emerged as a leading producer of brand name merchandise. Today Vista Dental designs, manufactures, packages and distributes more than 300 cataloged items, many of which offer significant advantages and margin improvement opportunities to both our end users and dealer partners.

Product Research and Development

In addition to a great number of trademarks, the company owns dozens of patents and patent pending applications related to a wide variety of unique dental devices and innovative dental equipment. Our team of engineers, scientists and clinicians provide a multi-disciplinary approach to evaluate processes and to improve upon current techniques and methodologies. We use state-of-the-art equipment and techniques to improve upon existing materials and we continue to partner with universities and dental professionals in the development of new and innovative products.

Our Dedication to Customer Satisfaction

Working with Vista Dental, you become part of the winning process:

We treat our customers with an overriding commitment to fairness and customer service.

We are committed to offering real product value at reasonable prices compared to industry competitors.

We strive to not only meet, but exceed, industry standards for quality systems, product reliability, and customer service.

Our success is measured in terms of customer satisfaction and brand recognition.

Results are achieved by serving our customers through faster, smarter, more aggressive selling systems, and by being more creative than our competitors.

Innovative Solutions for the dental industry

Perfect for Same - Day Placement of Restoration

THE #1 CHALLENGE

Make a GREAT 1st IMPRESSION.

Your patients will thank you!

The key to making a GREAT 1st impression:

Vista's Quick-Stat™ FREE is for the quick control of bleeding necessary for quality restorations.

Tip #1 – Quality Restorations:

If you are using a self etch followed by a conventional hemostatic and are not meticulous in cleaning all of the preparation, it will be challenging to obtain quality adhesion, potentially resulting in leakage and staining underneath the restoration.

Solution:

Vista's Quick-Stat™ FREE is a non-staining 25% Aluminum Chloride clear hemostatic that will NOT jeopardize the quality of your restorations.

WHY PAY MORE...

For canal cleansing solutions?

TESTED & PROVEN for Superior Results

CHX-Plus™

This is our patent pending, 2% chlorhexidine gluconate solution with powerful wetting agents and proprietary surface modifiers that improves the depth of penetration, reducing bacteria 10X faster than normal 2% chlorhexidine.

Page 32

EDTA

17% solution with a neutral pH, facilitates the removal of smear layer and dentin mud and prepares the dentin wall for better adhesion of filling materials.

Page 31

Chlor-XTRA™

Our patent pending 6% sodium hypochlorite formula is enhanced with powerful wetting agents and proprietary surface modifiers, allowing it to penetrate lateral canals and isthmuses by lowering the surface tension, yielding a much more powerful oxidizing agent.

Page 30

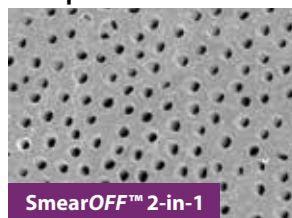

SmearOFF™

An EDTA based formula, enhanced with Chlorhexidine, which removes the smear layer and kills 99.9%** of bacteria. This mix eliminates steps and saves time on each procedure.

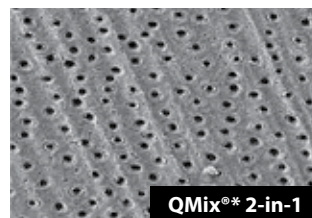

Page 33

**Independently confirmed by Nelson Labs; Time Kill Study protocol #STP0158.2

Compare the results:

SmearOFF™ 2-in-1

QMix®* 2-in-1

SEMs at 2000x magnification at the same section depth, irrigated with SmearOff™ vs QMix®* brand 2-in-1 irrigating solution. Note the preservation of peritubular cuffs with SmearOff™, demonstrating that while SmearOff™ completely removes smear layer it is gentler on dentin than the QMix®* brand.

Research Based for Best Outcomes

Endodontic retreatment rates are up over 35%, in part, due to improper irrigation techniques and protocol. With advancements in file technology, practitioners are now passing fewer files into the canal than ever before. Irrigation is vital for reliable root canal procedures, but passing fewer instruments means doctors no longer use as much irrigant solution.¹

Enjoy the convenience of a two solution kit!

- New CanalClean™ 2S offers everything needed for optimal canal cleanliness, in a convenient 2 solution kit.
- CanalClean™ 2S will save you time, eliminating the need for EDTA, CHX, and a rinsing agent!
- Chlor-XTRA™ and SmearOFF™ are 100% compatible and WILL NOT form a precipitate when mixed, making irrigation simple & predictable.

CanalClean™ 4S Kit

for Anterior Anatomy

- Step 1** – 12cc NaOCl – pharmacy controlled 6% concentration (Chlor-XTRA™)
 - Step 2** – 3cc EDTA 17% with optimized pH
 - Step 3** – 3cc Ethyl Alcohol Rinse
 - Step 4** – 3cc CHX-Plus™
- Dry: Micro-Aspirator with tip included

Chlor-XTRA™

Multiple Patents Pending

Vista's Chlor-XTRA™ is an enhanced 6% sodium hypochlorite solution designed for irrigation, debridement and cleansing of root canals during and after instrumentation. The addition of powerful wetting agents and proprietary surface modifiers enables it to penetrate into lateral canals and isthmuses by lowering the surface tension.

Clinically Proven:

- To work **4X FASTER** than ChlorCid®*
- To reduce post-treatment complications
- To improve contact and dissolve more tissue
- To increase lubricity
- To decrease surface tension

Chlor-XTRA™ offers:

- Greater oxidizing power
- 2+ times more wetting ability
- 2+ times more digestive
- Half the surface tension

Tissue dissolution by sodium hypochlorite: effect of concentration, temperature, agitation and surfactant addition.

Aim: Sodium hypochlorite is the most commonly used endodontic irrigant due to its antimicrobial and tissue dissolving activity. The aim of this study was to evaluate and compare the effects of concentration, temperature and agitation on the tissue dissolving ability of sodium hypochlorite. In addition, a hypochlorite product with added surface active agent was compared with conventional hypochlorite solutions.

Methods: Three sodium hypochlorite solutions from two different manufacturers in concentrations of 1%, 2%, 4% and 5.8% were tested at room temperature, 37°C and 45°C with and without agitation by ultrasonic and sonic energy and pipetting. Distilled and sterilized tap water were used as controls. Pieces of bovine muscle tissue (68±3) were placed in 10 ml of each solution for five minutes. In selected samples, agitation was performed for one, two or four 15 sec periods per each minute. The tissue specimens were weighed before and after treatment, and the percentage of weight loss was calculated.

Results: Weight loss (dissolution) of the tissue increased almost linearly with the concentration of sodium hypochlorite. Higher temperatures and agitation considerably enhanced the efficacy of sodium hypochlorite. The effect of agitation on tissue dissolution was greater than that of temperature, continuous agitation resulting in fastest tissue dissolution. Hypochlorite with added surface active agent was most effective in tissue dissolution in all experimental situations.

*J Endod. 2010 Sept; 36(9); 1558-1562 S Stojicic, DDS, MSc, *† S Zivkovic, DDS, PhD, † W Qian, DDS, PhD* and M Haapasalo, DDS, PhD* *Division of Endodontics, Department of Oral Biological & Medical Sciences, Faculty of Dentistry, University of British Columbia, Vancouver, Canada; † Department for Restorative Dentistry and Endodontics, Faculty of Dentistry, University of Belgrade, Belgrade, Serbia.*

Antimicrobial and Tissue Dissolving Capabilities of Different NaOCl Concentration

The objective of this in vitro study was to establish the antimicrobial efficacy and the potential to dissolve vital pulp using different concentrations of sodium hypochlorite (NaOCl) solutions. The following solutions were tested: (1) 2% NaOCl (Thick Jik); (2) 3.5% NaOCl (Jik); (3) 6% NaOCl (Vista); (4) 6% NaOCl (Dent-Ionics); (4) 6% NaOCl (Chlor-Xtra™) and (5) Water (Control).

No significant inhibition of *E. faecalis* was observed with sterile water (control) and 3.5% NaOCl. However, the 2% NaOCl and all the other 6% NaOCl solutions showed significant inhibition against *E. faecalis*. Chlor-Xtra™ dissolved the pulp tissue in significantly less time compared to all the other groups ($p < 0.05$).

Chlor-Xtra™ offered the best antimicrobial properties and tissue dissolving capabilities.

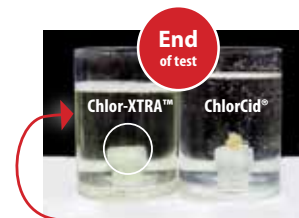

P. VAN DER VYVER, F. BOTHA, and F.A. DE WET University of Pretoria, School of Dentistry, Pretoria, South Africa

Chlor-XTRA™ VS ChlorCid®*

Effectiveness of pulp and tissue dissolution in 30ml solution for 45 minutes

Start of the test: Equal tissue sample is based on weight (0.125g / 125mg). Each sample was in 30ml of solution (for 4.166mg of tissue per ml of solution).

After 45 minutes Chlor-XTRA™ completely dissolved the tissue. In the ChlorCid® container, the sample tissue will not be completely dissolved for another THREE hours.

EDTA

Compare to Ultradent®: EDTA

17% Solution - Specifically engineered with LOWER pH for optimal performance! For best outcomes, a LOWER pH is more important than concentration. As pH increases, the availability of calcium ions from hydroxyapatite for chelation decreases . . . a pilot study using concentrations of alkaline (pH 11.3) solutions of EDTA showed them to be less effective in removing the smear layer.

Vista's EDTA:

- Prepares dentin walls for better ADHESION of filling materials
- Opens dentin tubules
- Removes smear layer and dentin mud
- Enhances cleansing

Scan to see the optimal pH for EDTA solutions should be between 7.5 - 9.

Demineralizing effects of EDTA at different concentrations and pH.

The purpose of this study was to compare effects of concentration and pH variations of EDTA on dentin demineralization. Twenty extracted, human permanent teeth with single canals were used in this study. Demineralizing effects of EDTA solutions at 10% and 17% concentrations at pH 7.5 and 9.0 were determined by measuring the amount of liberated phosphorus 1, 3, 5, 10, and 15 min after exposure.

Results showed that the amount of phosphorus liberated from dentin was greater with increased EDTA concentration and increased time of exposure, and was more effective at neutral pH than pH 9.0. The pH of EDTA solutions did not display any significant alterations during the demineralization process.

J Endod. 2009 Jan;35(1):95-7. Epub 2008 Nov 7. Williamson AE, Cardon JW, Drake DR. Department of Endodontics, University of Iowa College of Dentistry, Iowa City, Iowa, USA. anne-williamson@uiowa.edu

A scanning electron microscope evaluation of four root canal irrigation regimens.

A scanning electron microscope was used to evaluate the debridement capabilities of four irrigation regimens on both instrumented and uninstrumented root canal surfaces.

The combination of NaOCl and EDTA used alternately completely removed the smear layer from the instrumented root canal surfaces as well as the pulpal remnants and pre-dentin from the uninstrumented surfaces. In addition, the combination of NaOCl and EDTA caused the exposed calcospherites on the uninstrumented surfaces to have an eroded appearance.

J Endod. 1987 Apr;13(4):147-57. Baumgartner JC, Mader CL.

CHX-Plus™

Compare to Ultradent®*, Consepis®* Solutions

Multiple Patents Pending

Enhanced 2% Chlorhexidine Gluconate Solution Kills multispecies biofilm **2X faster** than standard 2% chlorhexidine. Contains 2% Chlorhexidine Gluconate plus powerful wetting agents and proprietary surface modifiers to improve the depth of penetration and kills bacteria 10X faster than normal 2% Chlorhexidine.

Scan to see the scientific data on CHX-Plus™

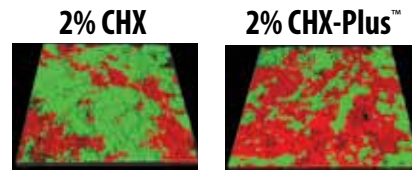

Evaluation of the effect of two chlorhexidine preparations on biofilm bacteria in vitro: a three dimensional quantitative analysis.

His study developed a biofilm model that closely mimicked in vivo biofilm to determine its susceptibility to endodontic antimicrobial irrigants by three-dimensional quantitative analysis. Collagen-coated hydroxyapatite (C-HA) and uncoated hydroxyapatite (HA) disks were inoculated with dispersed subgingival plaque for three weeks. Thick biofilms rich in spirochetes were formed on both substrates. Biofilms were subjected to 1-, 3-, and 10-minute exposures to CHX-Plus™ (Vista Dental Products, Racine, WI) and 2% chlorhexidine (CHX). After treatment, the volume ratio of dead bacteria to all bacteria in biofilms, indicated by the ratio of red and (red + green) fluorescence, was analyzed by confocal laser scanning microscopy for each medicament.

The proportion of killed bacteria depended on type of irrigant and time of exposure in both C-HA and HA biofilm models ($p = 0.00$). **CHX-Plus™ showed higher levels of bactericidal activity at all exposure times than 2%CHX ($p < 0.001$).** The C-HA biofilm was thicker than the HA biofilm. Less bacteria were killed in C-HA biofilm than in the HA model. *J Endod.* 2009 Jan;35(7):981-5. Epub 2008 Nov 7. Shen Y, Qian W, Chung C, Olsen I, Haapasalo M. Division of Endodontics, Department of Oral Biological and Medical Sciences, University of British Columbia, Vancouver, Canada.

The synergistic antimicrobial effect by mechanical agitation and two chlorhexidine preparations on biofilm bacteria.

This study investigates whether mechanical agitation (ultra-sonic or sonic) improves effectiveness of chlorhexidine against biofilm bacteria in vitro. Collagen-coated hydroxyapatite (CHA) disks were exposed to dispersed subgingival plaque for 3 weeks at 37 degrees C. The multispecies biofilms established were subjected for 1 and 3 minutes to CHX-Plus™ (Vista Dental Products, Racine, WI) and 2% chlorhexidine (CHX), with or without mechanical agitation. After treatment, the amount of dead bacteria in biofilms was analyzed by viability staining and confocal laser scanning microscopy (CLSM). The morphology of biofilms, with or without mechanical agitation, was also examined by CLSM. The structure of the biofilm showed no obvious change when the surrounding solutions were exposed to continuous ultrasonic or sonic agitation. **Combined use of mechanical agitation and chlorhexidine had a more pronounced anti-microbial effect against the biofilms than either one alone.**

J Endod. 1987 Apr;13(4):147-57 Shen Y, Stojicic S, Qian W, Olsen I, Haapasalo M. Division of Endodontics, Department of Oral Biological and Medical Sciences, University of British Columbia, Vancouver, Canada.

SmearOFF™

Patent Pending

Proprietary EDTA / CHX mix.

Formulated with wetting agents and surface modifiers. For best outcomes, our patent pending 2-in-1 mix effectively replaces two commonly used solutions: EDTA and CHX.

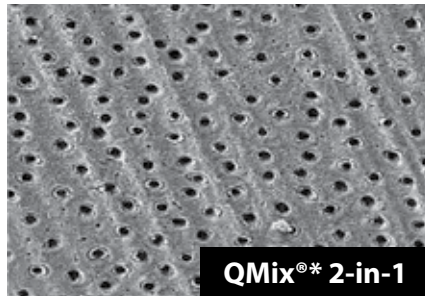

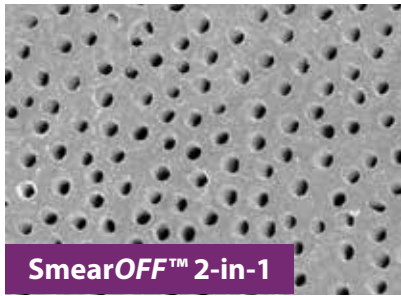

The obvious choice over QMix®* brand

- Superior chelation
- Won't form a precipitate when mixed with NaOCl
- No additional rinse needed when used with NaOCl
- Better calcium suspension
- Save 33% over QMix®* brand

SmearOFF™ removes both smear layer AND bacteria!

Results have shown that SmearOFF™ is equally as effective in removing smear layer as QMix®* brand!

Compare the results:

SEMs at 2000x magnification at the same section depth, irrigated with SmearOff™ -vs- QMix®* brand 2-in-1 irrigating solution. Note the preservation of peritubular cuffs with SmearOff™, demonstrating that while SmearOff™ completely removes smear layer it is gentler on dentin than the QMix®* brand.

EndoSafe™

Patent Pending

Apical Irrigation / Evacuation

Unique bellows feature allows you to move from one canal depth to another without modifying cannula. Ratcheting Safe-T™ syringe offers greater control in delivery of irrigants. Effective, Safe, and Non-Clogging!! Our **non-clogging** EndoSafe™ is a simple **negative pressure**, device providing simultaneous irrigation and evacuation, comparable in performance to the Discus EndoVac®! The collapsing bellows enhances irrigation, allowing users to move easily from one canal depth to the next with no need to modify the irrigating cannula. This eliminates the chance of clogging and saves valuable time during procedures.

- Simultaneous irrigation and aspiration
- Fluid flows from apical to coronal region to virtually eliminate clogging
- Ratcheting feature allows for a tactile and audible signal for every 0.2mL delivered
- Easy one-hand use - no assembly needed
- Disposable
- Includes flexible 30ga tip and 12cc Safe-T™ syringe
- Ideal for use with Vista endodontic solutions.

- Available 2" and 3.5" long
- Autoclavable
- Can be used with most A/W syringes!
- Essential for micro-endodontic and restorative procedures

Fits most standard and "Quick Change" air/water syringes

	SKU	PRICE
Standard 2" Package	[315260]	\$50.00
<i>(1) Precision Irrigator™ 2" length & (5) Blue-Flo™ tips</i>		
XL 3.5" Package	[315265]	\$50.00
<i>(1) Precision Irrigator™ 3.5" length & (5) Blue-Flo™ tips</i>		

EZ-Lock™

Patented

A "MUST" for all dental disciplines! The ideal irrigation accessory for subgingival irrigation in restorative, hygiene, periodontics, endodontics and oral surgery.

- As LOW as \$0.22 per procedure!
- Easily converts any A/W syringe into a subgingival irrigation handpiece when fitted with a luer lock style irrigation tip.
- Small (2") design for better visibility and greater access during irrigation and drying.
- Easy-to-use tips are disposable.
- Eliminates concern for cross-contamination
- EZ-Lock™ is compatible with current Sani-Tip® adapters. Vista adapters are available for most air/water syringes, including A-dec, Dental EZ, Star style, Engle/Marco style, and Press Ring style.

Evidence Supports ULTRASONIC Technology

The next evolution of irrigant activation: **ENDO|ULTRA™**
The world's first **CORDLESS** ultrasonic device!

Research Shows

Conventional hand instrumentation leaves as much as 35% of the canals untouched. Irrigation, although an important part of the canal disinfection and debridement process, cannot in itself be relied on to optimize canal cleanliness.

Proper irrigation protocol should include the use of enhanced endodontic solutions to facilitate removal of microorganisms, tissue remnants, and sentin chips from the root canal. Vista Dental offers a **complete line of enhanced irrigation solutions** that have been tested and proven for superior outcomes.

Irrigants are more effective when they are electro mechanically activated. Acoustic streaming and cavitation have been proven to significantly enhance cleansing of difficult anatomy. Ultrasonic energy not only disrupts biofilm while improving penetration of irrigants and removal of dentinal debris, but it also **greatly reduces bacteria levels** and improves root sealing.

Ultrasonic energy not only disrupts biofilm while improving penetration of irrigants and removal of dentinal debris, but it also greatly reduces bacteria levels and improves root sealing.

Irrigation Promo Pack

A winning combination for optimal canal cleanliness and improved outcomes!

The only **TRUE** 2-step irrigation protocol
No rinse needed when using Chlor-XTRA™ in conjunction with SmearOFF™ 2-in-1!

Chlor-XTRA™

Enhanced 6% sodium hypochlorite solution

- 2X more dissolution
- 2.5X thinner than standard NaOCl

SmearOFF™

- Optimizes smear layer removal
- Clears 27% MORE dentin tubules (compared to leading 17% EDTA product)
- Kills 99.99% bacteria in 10 seconds!
- Won't form a precipitate when mixed with NaOCl

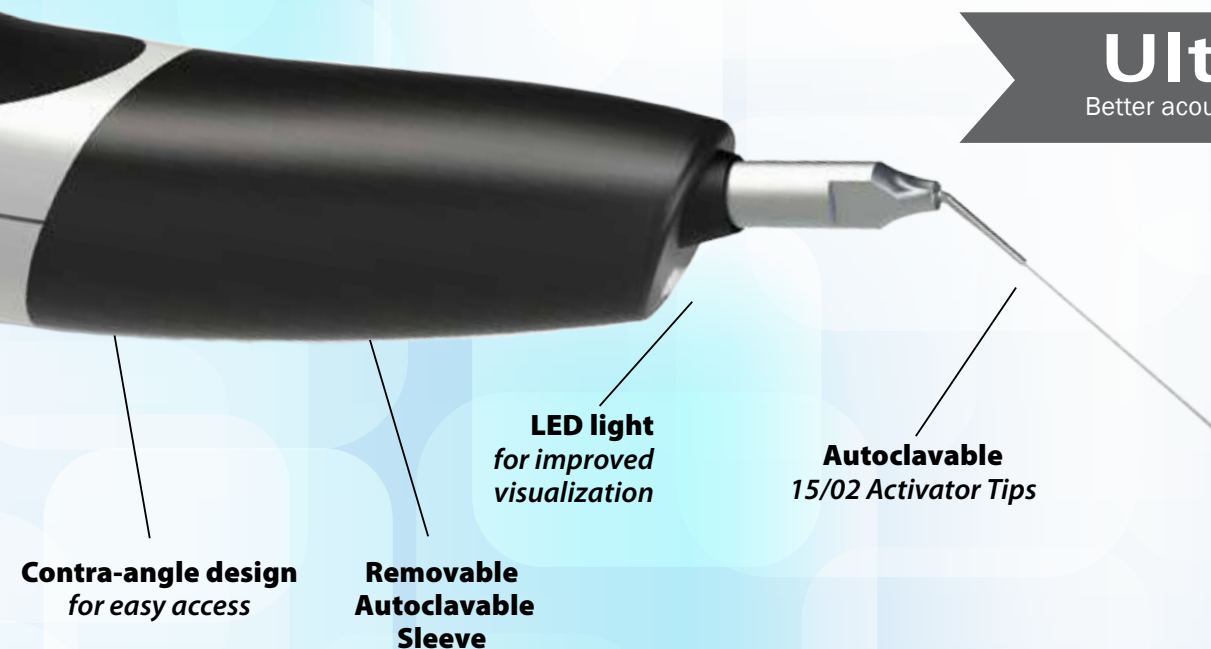

SKU	PRICE

ENDOULTRA™

Patent pending

SUPERIOR ACTIVATION* (compared to sonic devices)

Engineered and
manufactured in
the U.S.A.

Ultrasonic vs. Sonic Studies Prove:

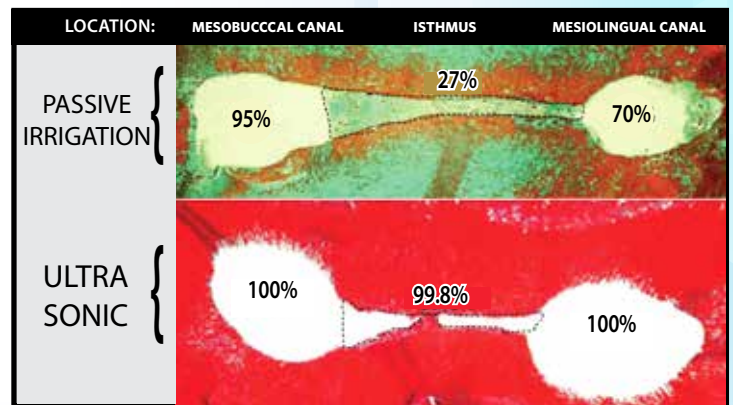

- That passive needle activation and even low frequency (Sonic) oscillation (160-190Hz) is simply not sufficient in producing acoustic streaming or cavitation within the canal space.

"The positive relationship between streaming velocity and frequency can explain the higher efficiency of PUI [(passive ultrasonic irrigation)] versus sonic irrigation"

Passive ultrasonic irrigation of the root canal: a review of the literature van der Sluis 2007

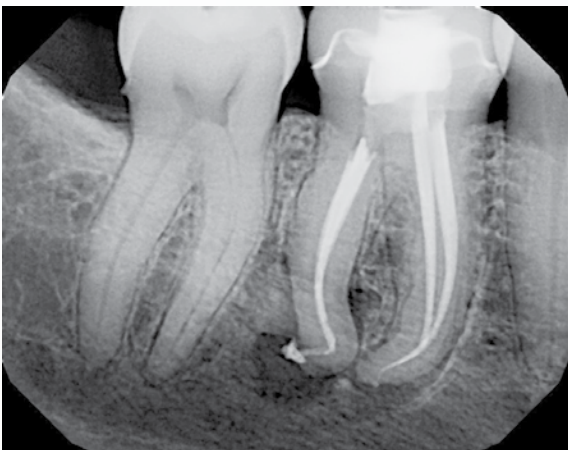

- That activation by means of ultrasonic frequency (30 kHz) not only generates increased acoustic streaming and cavitation, but results in significantly improved debridement of canal spaces and improved penetration of irrigants into dentinal tubules.

TOOTH CROSS-SECTION Showing Cleaning Efficacy of Canals and Isthmus

Percentages = amount of tissue dissolved Green = remaining pulp tissue

Study data: †Reprinted from Gutarts R, Nusstein J, Reader A, Beck M. In vivo debridement efficacy of ultrasonic irrigation following hand-rotary instrumentation in human mandibular molars. J Endod. 2005, with permission from Elsevier.

"I feel that EndoUltra™ with lots of irrigation is the only way I got sealer past this 90 degree turn in the distal root."

- Nick Southall, DMD. Mobile, AL

Courtesy of: Dr. Heinrich Dippenaar, DDS. Welkom, South Africa

Ultrasonic Energy Disrupts Biofilm and:

- IMPROVES removal of dentin debris
- IMPROVES penetration of irrigants
- IMPROVES cleanliness
- REDUCES bacteria levels
- IMPROVES accessibility
- IMPROVES root sealing

Ideal for use with Vista engineered endodontic solutions for optimal cleansing and improved results.

EndoUltra™ Disrupts biofilm and:

- IMPROVES cleanliness
- REDUCES bacteria levels
- IMPROVES penetration of irrigants
- Does NOT engage or remove tooth structure
- Resonates down the entire length of the Activator tip
- Runs at 40,000 Hz
 (vs - sonic versions that run at 160Hz - 190Hz)

"EndoUltra blends the cordless convenience and the proven adjunctive method of canal cleansing. Once you go Ultra, you won't accept anything less."
 - **Dr. Tung Bui, DDS, FICD, Tuscon, AZ**

"EndoUltra offers the most convenient method to deliver passive ultrasonic irrigation. Right weight, portable, ergonomic, efficient, and re-chargeable- what's not to like?"
 - **Dr. Joseph D. Maggio, DDS, Lisle, IL**

"I use the EndoUltra unit with NaOCl to disinfect the canals. I am happy with it compared to other units such as EndoActivator®"
 - **Jamshid Faghieh DDS, Bellevue, WA**

INTRODUCING

ULTRA|FLO™

Patent pending

Irrigation and Ultrasonic Activation, Together At Last.

Vista Dental Products introduced **UltraFlo™**. This patented device combines the two most vital components of **SUCCESSFUL endodontic treatment; Irrigation & Ultrasonic Activation!**

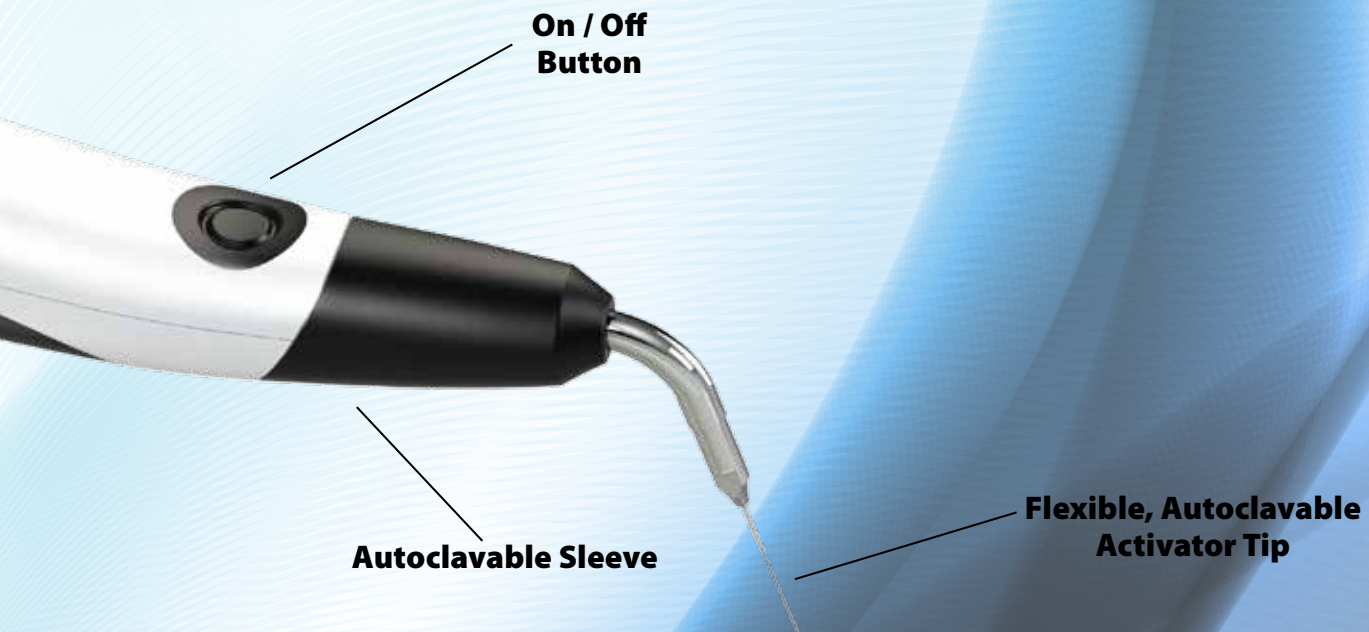

SKU: [409000]

PRICE: \$1095

Advancements in rotary instrumentation have led to shortened contact time of irrigating solutions within the canal system. For this reason, it is more important than ever to properly irrigate. Science has shown that irrigating solutions are more effective upon the introduction of ultrasonic frequencies. This leads to acoustic streaming and cavitation; known to significantly improve canal cleanliness.

UltraFlo™ is a cordless, compact, battery operated piezo ultrasonic (40kHz) device that simultaneously irrigates and activates. Providing a constant, consistent flow of endodontic solutions has never been easier. UltraFlo™ features a quick-connect, 20mL reservoir that is easily filled with the medicament of one's choice. UltraFlo™ ultrasonic activator is another example of Vista Dental Product's dedication to more safely and effectively achieve endodontic success.

Ultrasonic Energy Disrupts Biofilm and:

- IMPROVES removal of dentin debris
- IMPROVES penetration of irrigants
- IMPROVES cleanliness
- REDUCES bacteria levels
- IMPROVES accessibility
- IMPROVES root sealing

Ideal for use with Vista engineered endodontic solutions for optimal cleansing and improved results.

Piezo PILOT™ Scalers

8 Tips
Included

Piezo Pilot™ scalers offer easy portability, complementing a light-weight, compact design.

Now with lighted LED hand-piece for greater accessibility

Includes (8) ultrasonic tips
(1 each) SU1, SU6, HC and PTU,
plus 4 tips of your choice.

Piezo Pilot™ Pilot™ Includes:

- 1 - Detachable handpiece
- 1 - Omni-directional foot pedal
- 1 - Quick-disconnect water line
- 3 - Autoclavable handpiece sleeves
- 8 - Ultrasonic tips
- 8 - Torque wrenches

without **LED**: \$1,495

Acteon [402701]
EMS [402711]

with **LED**: \$1,695

Acteon [402800]

PIEZO PILOT™:

Innovative. High-end performance.

- Push button controls
- Variable irrigation flow settings
- Broad range of power for any endodontic procedure

Versatile design

- Left or right mounting magnetic handpiece holder
- Detachable handpiece (available in Acteon* or EMS*)

Compact. Comfortable.

- Easy to remove autoclavable silicone sleeves
- Small, lightweight and portable

Piezo and CO-PILOT™ Dual Reservoir Scalers

10 Tips
Included

Piezo Pilot™ scalers offer easy portability, complimenting a light weight and compact design.

This is a great feature for practices where space is an issue or the unit will be shared.

Includes (10) ultrasonic tips
(2 each) SU1 and SU6, (1ea) HC and PTU, plus 4 tips of your choice.

Piezo Co-Pilot™ Dual Reservoir Scaler

Features (2) 300mL fluid capacity reservoirs - one on each side, with easy-to-see liquid levels

Piezo Co-Pilot™ Co-Pilot™ Includes:

- 1 - Piezo Pilot™ ultrasonic scaler
- 1 - Detachable handpiece
- 1 - Omni-directional foot pedal
- 1 - Quick-disconnect water line
- 10 - Ultrasonic tips

Cavi-Pro™ Ultrasonic Tips

Ideal for creating small volume cavities for conservative dentistry. For Minimally Invasive Cavity Prep.

- Vista ultrasonic tips are designed to fit all major piezo scaling units including the Piezo Pilot™ Offer direct access to the lesion for greater precision.
- Will not damage adjacent tooth structure or surrounding healthy tissue.
- Minimally invasive for greater patient comfort

Cavi-Pro™ Tips for Piezo Pilot™ and...

Ultrasonic Gracey Mini Curette Tips

Patent Pending

The shorter, more slender blades, plus a longer shank allow these patent pending Gracey Mini Curette tips better access in places that are out of reach with regular sized tips (for instance, with misalignments, areas of tight tissue attachment when furcations are present, or when teeth overlap and are crowded because the bite was never corrected with braces).

- **Longer shank than regular curettes:** For better access into deeper pockets.
- **Slender blades:** Aid in tactile sensitivity, enhanced deep pocket access and adaptation to root surfaces.
- **Shorter blades (average 1.2 mm):** For better scaling in NARROW pockets, reduced tissue damage and greater adaptation to the root surface.

Price per tip: \$125.90

BUY 5 or more GET 3 FREE

SU1 - Light to medium-heavy supra-gingival (comes with tip wear marking)

■ *Ideal for light to medium-heavy cases of supra-gingival calculus. Produces a smoothly scaled surface with minimal need for secondary hand instrumentation. Use the side radius of the initial 2-3mm of the tip in a sweeping motion on the tooth enamel.*

SU2 - Heavy supra-gingival calculus removal

■ *Flat edge for removing high density deposits: Use to shear off calculus, use an up-and-down motion with the flat edge of the top of tip and the side of tip perpendicular to tooth surface.*

SU3 - Tobacco, coffee and other stain removal

■ *Rounded edge for stain removal: Use to shear off stubborn stains, use an up-and-down motion with the rounded edge of the top of the tip and the side of tip on the surface of the tooth.*

SU4 - Scaling of sensitive areas

■ *Less abrasive than SU1-SU3 tips: Use in periodontal pockets and with other sensitive locations.*

SU5 - Interproximal scaling

■ *Thin tip design: The thin design of this tip permits easier entry into most interproximal spaces.*

SU6 - Sub-gingival scaling (comes with tip wear marking)

■ *Long, thin tip design for less invasive entry into sub-gingival pockets. Produces reduced patient sensitivity.*

HC - Universal curette design (comes with tip wear marking)

■ *Designed for deep pocket access. Ideal for sub- and supra-gingival scaling. Powerful enough for medium to heavy calculus removal. Use edge of tip to guide motion for smooth results.*

HA - Light to medium sub-gingival calculus (Diamond-coated)

■ *Use this probe at low power levels to treat anterior teeth or as follow-up to more abrasive sub-gingival tips.*

PTU - Sub-gingival pocket scaling (comes with tip wear marking)

■ *Thin tip for sub-gingival scaling; simulates natural curvature of a tooth to provide easy access into pockets with minimal patient discomfort. This universal tip is extremely thin to minimize patient sensitivity and create a smoothly scaled surface.*

PTL / PTR - Sub-gingival scaling (PTL - Left Bend / PTR - Right Bend)

■ *Used for lower-left and upper-right molars and pre-molars. Also effective for scaling interproximal spaces between molars.*

HFL / HFR - Light scaling of difficult areas (Diamond-Coated)

(HFL - Left Bend / HFR - Right Bend)

■ *Use on furcations and interproximal sides of molars and pre-molars. Proper use requires non-foot pedal actuated placement, followed by activating foot pedal, scaling, releasing foot pedal and removal of tip. Use at low power settings.*

EQUIPMENT

■ **S70 / S70D** 70° degree angled surgery tip
Generally used on anterior teeth.
 The S70D is diamond-coated to offer greater durability and provide more abrasive power.

■ **SA / SAD** - Universal design surgery tip
Generally used on anterior teeth.
 SAD is diamond-coated to offer greater durability and provides more abrasive power.

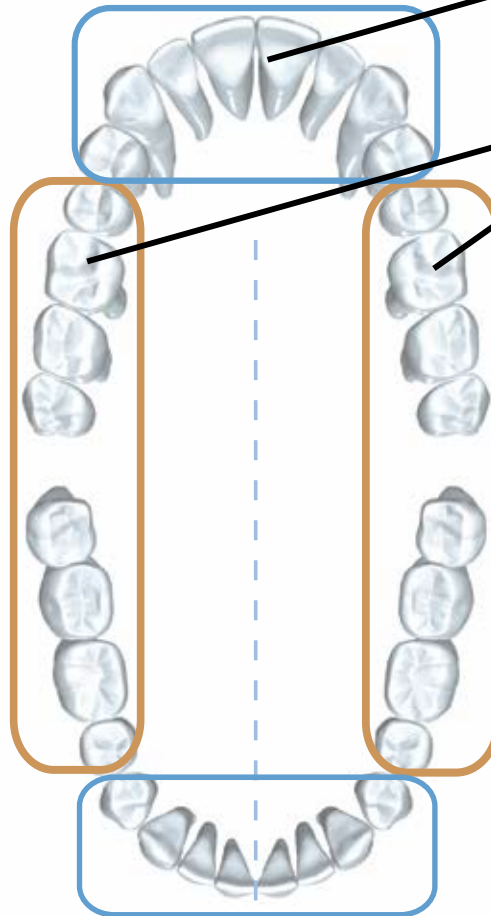

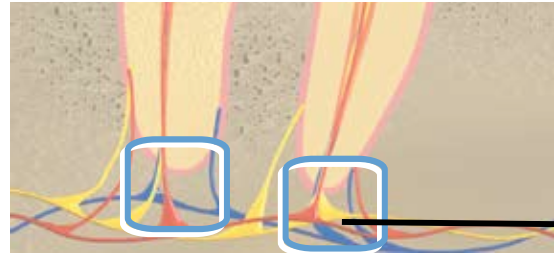

■ **S90 / S90D** - 90° degree angled surgery tip
Generally used on anterior teeth.
 The S90D is diamond-coated to offer greater durability and provide more abrasive power.

■ **SML / SMLD** - Left angle surgery tip
SMR / SMRD - Right Angle surgery tip
Generally used on molars and pre-molars or on posterior teeth.
 SMLD and SMRD are diamond-coated to offer greater durability and provide more abrasive power.

■ **SPL / SPLD** - Left angle surgery tip
SPR / SPRD - Right angle surgery tip
Generally used on molars and pre-molars or on posterior teeth.
 SPLD and SPRD are diamond-coated to offer greater durability and provide more abrasive power.

Therma-Flo™

Revolutionizing Composite Delivery Science Behind the Heat

The heating technology of Therma-Flo™ significantly increases the flow characteristics of highly filled composites while helping to increase polymerization and improve depth of cure. Heat lowers the viscosity of composite material, allowing it to better flow and adapt to cavity walls. As a result, voids are reduced, which then reduces the risk of secondary caries. Heating composite material also improves its physical and handling properties without modifying color or stability.

Benefits of HEAT:

- Creates fewer voids, with greater depth of cure and shorter curing time
- There is no adverse effect to pulp tissue or to composite material
- Easier to place and manipulate composite material

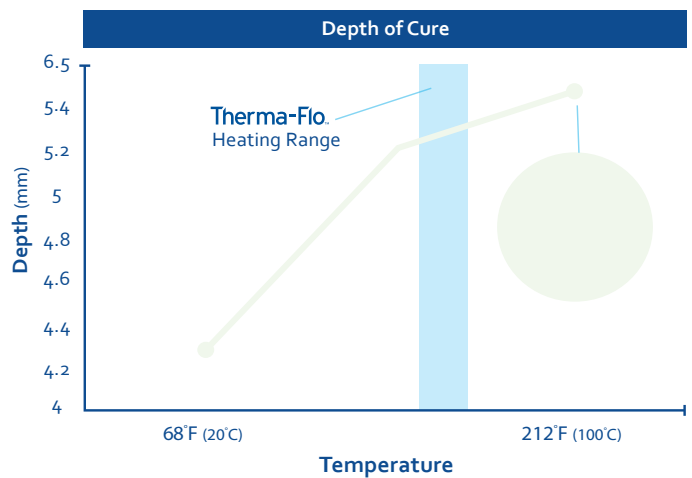

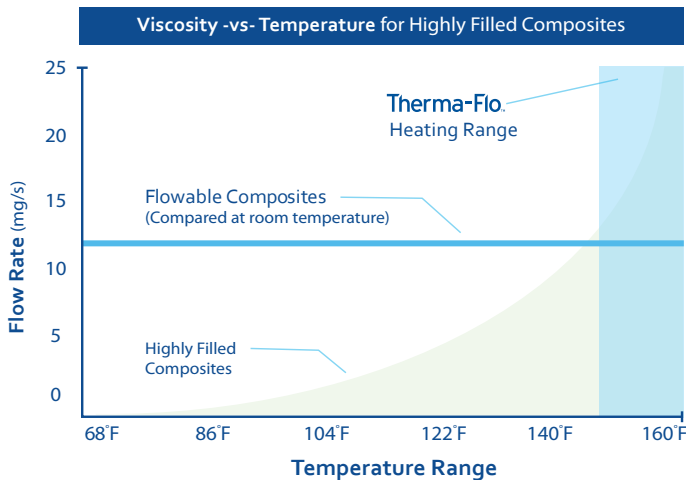

"Incremental placement of composite material becomes extremely accurate with Therma-Flo™. When I use the Composite Warmer with either 2X or 4X Step Down tips, I can easily place precise increments and sculpt the composite into beautiful restorations that will last the patient for years and years."

Randy Shoup, DDS

FEATURES	BENEFITS OF USING HEAT	PROOF
Depth of Cure	Fill restorations faster by increasing the depth of cure and reducing curing time.	⁴ Burtscher 2005, ² Munoz 2008
Flowability	When heated, highly filled composites flow up to 10X better.	³ Lucey 2010
Increased Polymerization	Significantly higher monomer conversion values. Dramatic increase in polymerization rates.	⁵ Trujillo 2003, ⁶ Daronch 2005
Decreased Voids	Heating significantly reduces the chance of secondary caries.	⁹ Choudhary 2011, ¹⁰ Wagner 2008, ⁸ Froes-Salgado 2010
Color + Stability	Heating will NOT modify color or stability properties of composite material.	¹ Mundim 2011
Micro-Hardness	Heating results in shorter curing times and enhances subsequent surface hardness.	² Munoz 2008, ³ Lucey 2010
Viscosity -vs- Temperature	Heating makes it easier to place material and results in better adaptation to cavity walls.	³ Lucey 2010
Heating Safety	Heating will NOT damage pulp tissue or cause discomfort. No other safety concerns.	⁷ Daronch 2007 ¹¹ Rueggeberg 2010

Therma-Flo™

Revolutionizing Composite Delivery Composite Warming Kit

Increase the flowability of highly filled composites without compromising tensile strength, wear-resistance or aesthetics

- Base unit warms multiple capsules

Includes:

- (1) Warming Unit
- (2) Composite Syringes
- (20) 2X Step Down Tips
- (20) 4X Step Down Tips

VOLTAGE	SKU	PRICE
110V	[404350]	\$595.00
220V	[404355]	\$595.00

Step Down Tips

Extended length: deeper access and precise placement
A completely new delivery option enabling doctors to use much less composite with little manipulation required to place the material.

- 2X and 4X orifice reduction for more precise placement of composite material
- Narrow profile for optimal visualization
- Easy extrusion of composite material

SIZE	QTY	SKU	PRICE
2X	40 / CUP	[320816]	\$30.90
4X	40 / CUP	[320817]	\$30.90

Use your favorite composites!

Therma-Flo™ Applicator™, Warming Kit and Step Down tips are compatible with most manufacturer's capsules.

Composite Applicator™

Patented

Motorized extrusion of heated composites

- Heats at the point of delivery to maintain optimal flowability throughout procedure
- Improves composite handling properties
- Lightweight ergonomic design reduces hand fatigue
- Cordless and compact

Includes:

- (20) 2X Step Down Tips
- (20) 4X Step Down Tips
- (1) Rechargeable handpiece
- (1) Warming base

QTY	SKU	PRICE
1	[407821]	\$995.00

Heating up Composite Delivery

Vista Dental has revolutionized composite delivery with their new Therma-Flo™ line of products, uniquely engineered to utilize heat for optimal performance of any preferred composite material. Vista's Composite Applicator™ and Composite Warming Kit allow you to use highly filled composites in a wider variety of applications and also provide the versatility to enhance virtually all restorations.

Designed to enhance the performance of Therma-Flo™ products, Vista's Step Down tips offer extended length for deeper access and greater precision in composite placement.

Uniquely designed to adapt to most composite capsules, Step Down tips represent a major step forward in the control of composite delivery.

Uniquely designed to adapt to most composite capsules, Step Down tips represent a major step forward in the control of composite delivery.

Brite

Lite™

Oral Illumination System

LIGHT UP YOUR PRACTICE WITH THE NEW BRITE-N-LITE™ ORAL ILLUMINATION SYSTEM

Vista Dental™ introduces Brite-N-Lite™, a powerful oral illumination device. Brite-N-Lite™ offers direct illumination of the working area during any procedure. This clip-on LED device is autoclavable and easy to use with virtually any aspirator. The cool white LED light optimizes visibility within the oral cavity.

Other illumination systems on the market require cumbersome battery packs, cords, and expensive adaptors. Brite-N-Lite™ is a compact, convenient illumination system that adapts to the instruments that you currently own. The small, hands-free device securely mounts to your standard evacuation tubing. Brite-N-Lite™ features a long lasting, rechargeable battery for hours of procedural use. The intuitive design of Brite-N-Lite™ makes it the most practical, easy to use oral illumination system on the market.

FREE with every Brite-N-Lite™ comes with one metal aspirator of your choice!

Brite-N-Lite™ LED Kit:

[508001] **\$525.00**

Brite-N-Lite™ LED Light Guide:

[508010] **\$175.00**

Grommets - 5mm:

[508013] **\$25.00**

Grommets - 6.5mm:

[508012] **\$25.00**

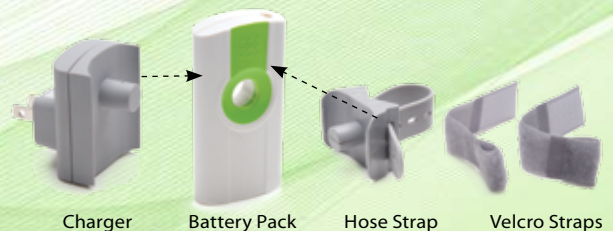

Brite-N-Lite™ LED KIT

The illumination kit includes the following components plus one aspirator of choice

Includes:

- Battery Pack and Charger
- (2) LED Light Guide
- Choice of surgical aspirator
- (12) grommets to fit 5mm and 6.5mm aspirators
- Hose Strap
- Velcro Straps

Mixing Wells

White, disposable, and able to use with all materials.

- Dual-well style
- Convenient

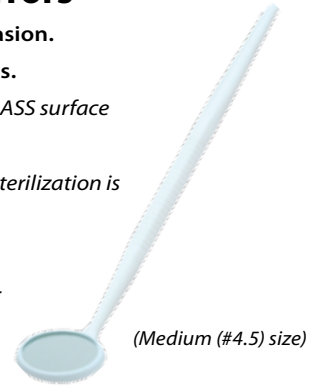

QTY	SKU	PRICE
100 / BAG	[503414]	\$13.50

Disposable Mouth Mirrors

For office examinations and air abrasion.

Made with High Quality Plated Glass.

- Highly reflective ultra-thin PLATED GLASS surface enhances imaging
- Ideal for high-volume where interim sterilization is not practical
- Light-weight with ergonomic handle
- Can also function as a cheek retractor

(Medium (#4.5) size)

QTY	SKU	PRICE
60 / BOX	[307001]	\$27.75

Cheek Retractors

- Disposable
- Retracts cheeks and depresses tongue
- Allows for unrestricted access to the mouth

QTY	SKU	PRICE
10 / PACK	[205215]	\$15.30

Metal Mirror Stems

Fits simple stem or cone socket mirrors.

- Resists Corrosion

SIZE	SKU	PRICE
Round: Simple Stem	[103001]	\$2.25
Cone Socket	[103002]	\$2.25
Octagonal: Simple Stem	[104001]	\$2.25
Octagonal: Cone Stem	[104002]	\$2.25

Composite Brushes & Brush Handles

Universal style for application of etchants, sealants, adhesives, and hemostatic agents.

- Tapered tip allows smooth, even application of all liquid types
- DuPont** nylon bristle tips fit all leading brush handles
- Will not slip or dislodge
- Handle accepts all composite brush styles (including leading brush tips)
- Manufactured in rigid plastic for REPEATED AUTOCLAVING
- Added reach makes application easier

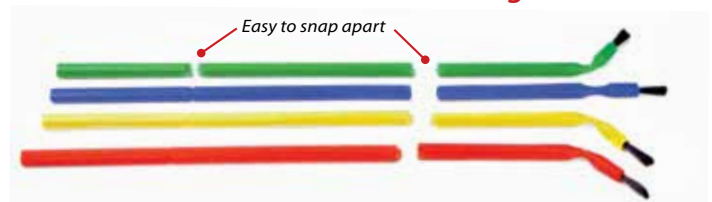

SIZE	QTY	SKU	PRICE
Fine Bristle	100 / BAG	[302001]	\$7.80
Regular Bristle	100 / BAG	[302002]	\$7.80
Handles	2 / BOX	[302004]	\$7.80

Bendable Brush Applicators

For applying of etchants, resins and bonding agents.

- BENDS TO ANY angle and stays in place
- Durable brush with taper-cut bristles
- Adapts easily for lingual or interproximal use

NEW! Bendable Handle Design

Shown with regular bristles.

BENDABLE BRUSH APPLICATORS	QTY	SKU	PRICE
Fine Bristle	144 / BOX	[204001]	\$24.60
Regular Bristle	144 / BOX	[204002]	\$24.60
Combo (half regular & half fine)	144 / BOX	[204005]	\$24.60

Combo (half regular & half fine)	432 / BOX	[204006]	\$67.35

Cotton-Tipped Applicators

For delivery of all dental liquids and resins.

- Non-sterile virgin cotton
- Tightly woven for lint-free delivery

SIZE	1000/ BOX	PRICE
3 in	[202003]	\$8.80
6 in	[202006]	\$8.80

Long Shank Brushes

For facial, buccal or interproximal applications.

- Black nylon bristles are compatible with ALL dental liquids and resins
- Easy-grip 2-inch handle length

QTY	SKU	PRICE
1000 / BOX	[302003]	\$6.20

Bite Wing Tabs

Identify / pre-tab x-rays

- Sticks indefinitely to all types of bite wing x-ray surfaces
- Unique dispenser box - peels off each tab automatically

QTY	SKU	PRICE
500 / Box	[308001]	\$6.99

Disposable HVE Screens

Use with high-volume aspirators to trap debris.

- Disposable and cost-efficient
- Adapts to plastic or metal high-volume aspirators
- Helps prevent grasping of soft tissue and stops amalgam

QTY	SKU	PRICE
100 / BAG	[803011]	\$18.20

Air / Water Syringes

Vista offers premium A/W syringes at non-premium prices that other manufacturers can't beat!

- Autoclavable
- Available in one- and two-button styles
- Includes Fast-Change tip

AIR / WATER SYRINGES	SKU	PRICE
One-Button (syringe only)	[315390]	\$69.65
<i>(1) One-Button A/W Syringe & (1) Fast Change Tip</i>		
Two-Button (syringe only)	[315350]	\$69.65
<i>(1) Two-Button A/W Syringe & (1) Fast Change Tip</i>		

Syringe Tip Covers

For infection control with metal syringe tips.

- Autoclavable
- Requires no conversion adapters
- Will not impede air or water flow
- Slides over 3-way metal syringes
- Hydrophobic filter adds "suck-back" protection
- Meets OSHA and CDC Standards

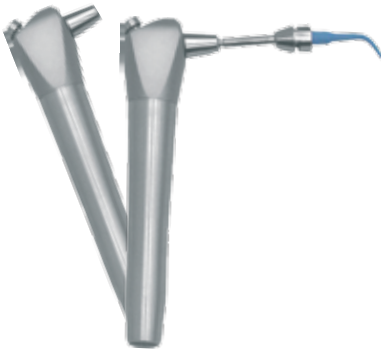

QTY	SKU	PRICE
100 / BAG	[301001]	\$17.75
250 / BOX	[301002]	\$39.60

Regulated Air / Water Syringes

With built-in flow regulator

- Autoclavable
- Syringe features a fixed orifice flow control
- Regulated flow on both one and two button syringes
- Ideal for use with EZ-Lock™ and Precision Irrigator

REGULATED A / W SYRINGES	SKU	PRICE
Regulated One-Button Syringe Kit	[315384]	\$109.20

ULTRASONIC TIPS

LOW PRICE, HIGH QUALITY

HYGIENE • PERIODONTICS • ENDODONTICS • APICAL SURGERY • RESTORATIVE

On the most popular and most comprehensive selection of ultrasonic tips.

Vista Dental offers high quality ultrasonic tips which fit on all leading piezoelectric unit. Offering Acteon^{®*}, EMS^{*}, and Amdent^{*} thread styles. Vista's tips are backed by the company's "Mountains Above the Rest" standard of quality—ensuring the highest level of performance. Our extensive selection includes tips for hygiene, perio, cavity prep, and endodontic applications.
