Contents

1.0 INTRODUCTION

This procedure details the requirements for the testing and acceptance of the Immingham Storage Co Ltd, East Terminal, No.4 Switchroom Safety Instrument System logic panel.

This FAT is part of the life cycle approach required for Safety Instrument Systems as required in BS EN 61511-1:2004 Section 13 where the objectives are to ensure the logic solver satisfies the requirements defined in the Safety Requirements Specification and all elements perform correctly. No software is employed in this SIS; hence the tests involve hardware checks only.

Test results including documentation verification are recorded in this report and documentation listed in section 2.0. All results to be initialled and dated. Any failure during the test must be documented and analysed together with details of the appropriate corrective action.

The testing shall be completed in the section and step order laid out in this report.

The logic panel will be 'Cold' tested prior to powered functional testing.
This report will be used to control and record the method statements and functional tests. Controlled copies of listed documentation will be used to record, by highlighting (yellow), satisfactory terminations and functions. Errors and omissions will be corrected and noted in red. The controlled documentation will constitute a significant proportion of the testing records and provides an audit trail to the 'As Built' issue.

The testing procedure will request confirmation of functions, a change of status not requested will require investigation.

3.0 INSPECTION

3.1 EQUIPMENT CONFORMS TO INSTRUMENT SPECIFICATIONS

Equipment Required	
Hand Tools, yellow highlighter, red pen	
Purpose of Test	
To verify the fitted equipment is as specified. To verify the fitted equipment is set up as specified.	
Method Of Test	**Result/Date**
3.1.1 Controlled copies of listed specifications will be used to record, by highlighting (yellow), correct equipment is installed as per Tag number listed on specification. Errors and omissions will be corrected and noted in red. Record serial numbers of equipment on controlled copy specifications . Switches and dials to be adjusted to correct settings as detailed on drawings, verify set correctly by highlighting (yellow) on controlled copy drawings.	
1. SI277001_SPC - Tank Level Switch (Liquiphant)	
Actions/Comments	
	Sign / **Date**
Tested by	21/3/14

3.2 LOGIC PANEL CONSTRUCTION INSPECTION

Equipment Required	
Hand Tools, yellow highlighter, red pen.	
Purpose of Test	
To verify the logic panel construction is satisfactory to proceed to powered functional testing. The logic panel has been constructed and wired by a competent & reputable panel building company; initial quality checks have been carried out prior to being available for witnessed factory testing.	
Method Of Test	**Result/Date**
3.2.1 Controlled copies of listed logic drawings will be used to record, by highlighting (yellow), satisfactory terminations and functions. Errors and omissions will be corrected and noted in red.	
1. External panel layout and identification conforms to SI483005_DWG and SI483008_SCH.	✓
2. Internal panel layout and identification conforms to SI483006_DWG.	✓
3. Panel physical construction and paintwork satisfactory.	✓
4. Gland plates correctly fitted and satisfactory.	✓
5. Doors and locks operational.	✓
6. Equipment mountings secure.	✓
7. Panel earthing correct.	✓
8. All equipment voltage rating correct and conforms to specifications.	✓
Actions/Comments

Tested by		21/3/14

3.3 LOGIC PANEL WIRING INSPECTION

Equipment Required	
Hand Tools, yellow highlighter, red pen.	
Purpose of Test	
To verify the logic panel internal wiring is satisfactory to proceed to powered functional testing. The logic panel has been constructed and wired by a competent & reputable panel building company; initial quality checks have been carried out prior to being available for witnessed factory testing.	
Method Of Test	**Result**
3.3.1 A random sample of the following tests to be carried out. During the procedure of functional testing the controlled copies of listed logic drawings will be used to record, by highlighting (yellow), satisfactory compliance with actions 1 to 6. On completion of all functional testing, all logic drawings should be fully highlighted. Errors and omissions will be corrected and noted in red.	
1. Terminals type and numbering conforms to logic drawings.	✓
2. Panel wire feruling conforms to logic drawings.	✓
3. Panel wire gauge and colour conforms to panel specification.	✓
4. Fuse and MCB ratings conform to logic drawings.	✓
5. Termination and crimps tight.	✓
6. Point to point wiring correct to logic drawings.	✓

4 FUNCTIONAL TESTING

4.1 PANEL INFRASTRUCTURE

Equipment Required	
Multi-meter, hand tools, yellow highlighter, red pen.	
Purpose of Test	
To verify the functionality of the panel infrastructure.	
Method Of Test	
	Result
1. Initial setup, all MCB's to the off position, all 24Vdc, 0Vdc fuses and links removed. Connect a suitably protected 240Vac supply to the panel isolator incoming terminals.	✓
2. Select internal isolator to off position, establish ac power to logic panel. Confirm no Vac at MCB's, select internal isolator to on position, confirm and record 240 Vac power on all MCB's.	ISO On 240 .....Vac ISO Off ....0.....Vac
3. Confirm and record 24Vdc on all TB24V terminals to associated TB0V terminal when MCB 1 on, confirm 0Vdc on all TB24V terminals to associated TB0V terminal when MCB 1 off.	MCB On 24.....Vdc MCB Off ....0.....Vdc
4. Confirm socket energised when MCB 2 on, confirm de-energised when MCB 2 off..	✓
5. Confirm panel internal light illuminated when MCB 3 on, confirm extinguished when MCB 3 off.	✓
6. Confirm power on load side of MCB 4 when MCB 4 on, confirm no power on load side when MCB 4 off.	MCB On 240....Vac MCB Off .0.....Vac
7. Confirm power on load side of MCB 5 when MCB 5 on, confirm no power on load side when MCB 5 off.	MCB On 240...Vac MCB Off ...0.....Vac
8. Insert each 24Vdc fuse and 0Vdc link in turn confirming 24Vdc across load side and associated panel equipment powers up where applicable.	✓

4.2 LOOP TESTING

4.2.1 MANUAL SHUTDOWN – ESD

Equipment Required	
Multi-meter, hand tools, links, yellow highlighter, red pen.	
Purpose of Test	
To verify the functionality of the ESD logic trip and reset actions. To verify correct lamp status and lamp test action. To verify the functionality of an ESD fuse failure. To verify the functionality of an ESD open circuit failure.	
Method Of Test	
4.2.1.1 Simulate a volt free input to manual shutdowns in the system by applying and removing a link on the associated incoming terminals. Input linked manual shutdown relay energised, input open circuit manual shutdown relay de-energised. Each relay to be tested for energised to de-energised to simulate external ESD pushbutton action. **4.2.1.2** Open circuit manual shutdown incoming and remote reset link on incoming terminals, link ESD input confirming relay does not re-energise until remote reset input is replaced. **4.2.1.3** Remove and replace associated fuse for ESD, confirm ESD relays de-energised whilst removed. **4.2.1.4** Confirm ESD status lamp illuminated whilst relay de-energised, extinguished whilst relay energised. confirm ESD status lamp illuminates whist lamp test pushbutton depressed when relay energised.	Result
1. ISCo Site ESD R124.	✓
2. ISCo Site ESD R124A.	✓
Actions/Comments	

Approvals (Note: Signature indicates acceptance of test with actions/comments noted)	**Sign**	**Date**
Tested by		21/3/14

4.2.2 MANUAL SHUTDOWN - BUND ISOLATION PUSHBUTTONS

Equipment Required	
Multi-meter, hand tools, links, yellow highlighter, red pen.	
Purpose of Test	
To verify the functionality of the bund isolation pushbutton logic. To verify correct BPCS interface status. To verify the functionality of an ESD fuse failure. To verify the functionality of an ESD open circuit failure.	
Method Of Test	
4.2.2.1 Simulate a volt free input to each isolation relay in the system. Incoming terminals linked isolation relay energised, incoming terminals open circuit isolation relay de-energised. Each relay to be tested for energised to de-energised to simulate isolation pushbutton action. **4.2.2.2** Confirm BPCS status on outgoing terminals, outgoing terminals to BPCS closed circuit whilst relay energised, open circuit whilst relay de-energised. **4.2.2.3** Remove and replace associated fuse for each isolation, confirm isolation relay de-energised whilst removed.	Result
1. Tank 561 Isolation R296.	✓
2. Tank 564 Isolation R376.	✓
3. Tank 568 Isolation R456.	✓

Tested by		21/8/14

4.2.3 SYSTEM TRIP RESET

Equipment Required	
Multi-meter, hand tools, links, yellow highlighter, red pen.	
Purpose of Test	
To verify the functionality of the system reset logic. To verify the functionality of an fuse failure.	
Method Of Test	
4.2.3.1 Operate local reset pushbutton, confirming system trip reset relays energised whilst reset depressed. Simulate a volt free input to remote reset incoming terminals, incoming terminals linked reset relays energised, incoming terminals open circuit reset relays de-energised. **4.2.3.2** Remove and replace fuse confirm relay de-energised whilst removed and reset pushbutton activated.	Result
1. Reset Relay R84.	✓
2. Reset Relay R85.	✓
3. Reset Relay R86.	✓

4.2.4 VALVE FEEDBACK STATUS

Equipment Required	
Multi-meter, hand tools, links, yellow highlighter, red pen.	
Purpose of Test	
To verify the functionality of the limit switch feedback logic. To verify the functionality of the limit switch feedback BPCS interface. To verify correct lamp status and lamp test action. To verify the functionality of a fuse failure. To verify the functionality of open circuit failure.	
Method Of Test	
4.2.4.1 Simulate a volt free input to each limit switch relay in the system. Incoming terminals linked relay energised, incoming terminals open circuit relay de-energised. **4.2.4.2** Confirm BPCS status on outgoing terminals, outgoing terminals to BPCS closed circuit whilst relay energised, open circuit whilst relay de-energised. **4.2.4.3** Remove and replace associated fuse for each limit switch, confirm relay de-energised whilst removed. **4.2.4.4** Confirm limit switch status lamp illuminated whilst relay energised, extinguished whilst relay de-energised. confirm limit switch status lamp illuminates whist lamp test pushbutton depressed when relay de-energised.	Result
1. ZSO56101 Relay R299.	✓
2. ZSC56101 Relay R304.	✓
3. ZSO56401 Relay R379.	✓
4. ZSC56401 Relay R384.	✓
5. ZSO56801 Relay R459.	✓
6. ZSC56801 Relay R464.	✓

4.2.5 HIGH LEVELS

Equipment Required	
Multi-meter, hand tools, links, yellow highlighter, red pen, SI277001_SPC E&H level switch probe.	
Purpose of Test	
To verify the functionality of each individual high level logic. To verify correct healthy to trip condition of level to open/close circuit self test. To verify correct BPCS interface status. To verify correct Hi Hi Level Annunciator Alarm Status To verify correct lamp status and lamp test action. To verify the functionality of a fuse failure. To verify the functionality of an open circuit failure. To verify the functionality of a short circuit failure.	
Method Of Test	
4.2.5.1 Connect an E&H Liquiphant level probe as Specification SI277001_SPC to incoming terminals. Ensure the probe tip is not covered and the internal switch unit is set to max/>0.7. Immerse and uncover probe tip, confirm relay de-energised whilst immersed. < 2 seconds response time required. **4.2.5.2** Confirm BPCS status on outgoing terminals, closed circuit whilst relay energised, open circuit whilst relay de-energised. **4.2.5.3** Confirm high level alarm status on outgoing annunciator terminals, closed circuit whilst relay energised, open circuit whilst relay de-energised. **4.2.5.4** Confirm high level lamp extinguished whilst relay energised, illuminated whilst relay de-energised, confirm high level lamp illuminates whist lamp test pushbutton depressed and relay energised. **4.2.5.5** Remove and replace associated fuse for each level switch, confirm relay de-energised whilst removed. **4.2.5.6** Open circuit field input to each level switch, confirm relay de-energised whilst open circuit. **4.2.5.7** Short circuit field input to each level switch, confirm relay de-energised whilst short circuit.	Result
1. Tank 561 High Level R283.	✓
2. Tank 564 High Level R363.	✓
3. Tank 568 High Level R443.	✓

4.2.7 SAFETY RELAY

Equipment Required	
Multi-meter, hand tools, links, yellow highlighter, red pen, SI277001_SPC E&H level switch probe.	
Purpose of Test	
To verify correct healthy functionality of each individual safety relay. To verify correct healthy to trip condition of each individual safety relay. To verify correct reset actions of each individual safety relay. To verify correct BPCS interface status. To verify correct lamp status and lamp test action. To verify the functionality of a fuse failure.	
Method Of Test	
4.2.7.1 Simulate level switch probe healthy by connecting an E&H Liquiphant level probe as Specification SI277001_SPC to incoming terminals. Ensure the probe tip is not covered and the internal switch unit is set to max/>0.7. **4.2.7.2** Simulate all valve limit switch feedback as valve closed by applying a link to incoming terminals. **4.2.7.3** Momentary depress reset pushbutton, confirm all safety relays energise. **4.2.7.4** Confirm safety relay BPCS status on outgoing terminals, closed circuit whilst safety relay energised, open circuit whilst safety relay de-energised. **4.2.7.5** Confirm safety relay lamp extinguished whilst relay energised, illuminated whilst relay de-energised, confirm safety relay lamp illuminates whist lamp test pushbutton depressed and relay energised. **4.2.7.6** Simulate a high level by immersing probe tip. Confirm safety relay de-energises. **4.2.7.7** Simulate level switch probe healthy by uncovering the probe tip. Confirm safety relay remains de-energised. **4.2.7.8** Simulate associated valve limit switch feedback as valve not closed by removing link applied to incoming terminals. **4.2.7.9** Momentary depress reset pushbutton, confirm safety relays remains de-energised. **4.2.7.10** Simulate associated valve limit switch feedback as valve closed by applying a link to incoming terminals. **4.2.7.11** Momentary depress reset pushbutton, confirm safety relay energised. **4.2.7.12** Remove and replace associated fuse for each safety relay, confirm relay de-energised whilst removed.	Result
1. Tank 561 R250.	✓
2. Tank 564 R330.	✓

4.2.8 IMPORT VALVES

Equipment Required	
Multi-meter, hand tools, links, yellow highlighter, red pen, SI277001_SPC E&H level switch probe.	
Purpose of Test	
To verify correct healthy functionality of each individual import valve logic. To verify correct healthy to trip condition of each individual import valve logic. To verify the functionality of a fuse failure.	
Method Of Test	
4.2.8.1 Simulate level switch probe healthy by connecting an E&H Liquiphant level probe as Specification SI277001_SPC to incoming terminals. Ensure the probe tip is not covered and the internal switch unit is set to max/>0.7. **4.2.8.2** Simulate all manual shutdown systems healthy by applying a link to incoming terminals. **4.2.8.3** Simulate all valve limit switch feedback as valve closed by applying a link to incoming terminals. **4.2.8.4** Momentary depress reset pushbutton, confirm all safety relays energise. **4.2.8.5** Confirm 24Vdc present at all XSV outgoing terminals. **4.2.8.6** Disconnect BPCS Open Command Wire Link. Confirm associated XSV outgoing terminals de-energised whilst removed and energised when connected. **4.2.8.7** Remove BPCS Open Command Wire Link, apply a 24Vdc supply to incoming BPCS Open commands terminals. Confirm associated XSV outgoing terminals energised whilst BPCS Open Command 24Vdc applied and de-energised when BPCS Open Command 24Vdc removed. **4.2.8.8** Remove BPCS Open Command Wire Link, apply a 24Vdc supply to incoming BPCS Open commands terminals. Confirm associated XSV outgoing terminals energised whilst BPCS Open Command 24Vdc applied and de-energised when BPCS Open Command 24Vdc removed. **4.2.8.9** Trip each interlock as detailed on SI483003_SCH in turn confirming associated XSV outgoing terminals de-energise in trip position and re-energise once healthy and reset. **4.2.8.10** Remove and replace associated fuse for each XSV, confirming associated XSV outgoing terminals de-energise with fuse removed.	Result
1. XSV56101.	✓
2. XSV56401.	✓
3. XSV56801.	✓

5.0 CHALLENGE TESTING

Equipment Required	
Multi-meter, hand tools, links, yellow highlighter, red pen.	
Purpose of Test	
To verify the actions of operator interactions do not affect the functionality of the system.	
Method Of Test	
5.0.1 Verify rising edge action of safety relay reset logic by depressing reset pushbutton whilst re-establishing level probe connection at incoming terminals with associated valve closed limit on. Confirm safety relay does not energise until reset pushbutton released and repressed. **5.0.2** Verify no impact on functionality by repeating import valve loop test with lamp test pushbutton depressed / linked out. Confirm XSV output actions correct.	Result
1. Tank 561 R250.	✓
2. Tank 564 R330.	✓
3. Tank 568 R410.	✓
4. XSV56101.	✓

7.0 HANDOVER AND LIFE CYCLE

Equipment Required	
None specific.	
Purpose of Test	
Return logic panel to working condition as found prior to testing. Update documentation and confirm testing complete to move on to next phase of proof testing.	
Method Of Test	
7.0.1 Remove all test links and test equipment. **7.0.2** Replace all removable links as found. **7.0.3** Replace incoming and outgoing terminals as found. **7.0.4** Replace or secure covers and guards. **7.0.5** Complete handover and deviation list. **7.0.6** Update documentation as required.	Result
1. All test links removed.	✓
2. All removable links as found.	✓
3. All incoming and outgoing terminals returned to as found.	✓
4. All covers and guards replaced or secured inside panel.	✓
5. Handover and deviation list completed.	✓
6. Documentation update as required.	✓
Actions/Comments

CONTENTS

1 REVISION HISTORY

Rev	Description
A	SI483 SIS Restructuring Project Original Issue

This document will be revised with any additions to or removals from the SIS throughout the operational lifecycle of the system.

2 INTRODUCTION

This document provides an overview and summery report to ensure that the Safety Instrument System Life Cycle complies with the requirements of the standard BS EN 61511.

3 SCOPE

Client / Company	-	Immingham Storage Co Ltd
Location / Facility	-	ISCo East Terminal
Plant Unit	-	Tanks 561, 564 & 568
Service	-	No4 East Storage Tank Overfill Protection
SIS Tag No	-	IME-SIS1
SIF's Tag No's	-	TK561-SIF1, TK564-SIF1 & TK568-SIF1
SIL	-	2

Lifecycle Stages

Operation and Maintenance	-	BS EN 61511 Clause 16
Modification	-	BS EN 61511 Clause 17

Audience
This document has been produced for use by competent persons knowledgeable in testing Safety Instrument Systems.

Brief System Description
IME-SIS2 under test is to prevent the overfill of storage tanks 561, 564 & 568 when on import duty. The system is classified as SIL2.
Full system description in documentation reference SI277001_RPT – IME-SIS1 Safety Instrument System and Piping & Instrument Diagrams – IME-K-0028 – Tank 561, IME-K-0052 – Tank 564 & IME-K-0050 – Tank 568.

Lifecycle
System performance data is collected to analyse and review the performance of the system and components against the criteria used for design.
The correct documenting of system testing provides historical system performance data in order that testing frequencies and procedures can be reviewed as required.
The system is owned by ISCo. The lifecycle is the responsibility of the system owners.

Operation and Maintenance Lifecycle Phases
Document Verification
Hardware Verification
Shutdown Conditions Proof Testing
Process Conditions Proof Testing
Preventative Maintenance
Equipment Failure Proof Testing
Fault Reporting
Functional Safety Meetings / Reviews /Faults and Activations
Stage 4 Function Safety Assessment

Modification Lifecycle Phases
Management of change
Stage 5 Function Safety Assessment
(Testing phases to be allocated at Stage 5 FSA as required)

4 DEFINITIONS AND ABBREVIATIONS

The following definitions and abbreviations apply to this document.

BPCS	Basic Process Control System
Logic Solver	Part of the SIS that performs one or more logic functions, e.g. safety relay, trip amplifier
Proof Test	Periodic testing to detect failures in a safety instrumented system
Protection Layer	A mechanism that reduces risk by control, prevention or mitigation
Sensor	Part of the SIS which measures the process condition
SIF	Safety Instrumented Function – A function with a specified safety integrity level which is necessary to achieve functional safety
SIL	Safety integrity level – A numerical number, 1 to 4 stipulating the level of integrity the system shall perform to, 1 being the lowest 4 the highest
SIS	Safety Instrument System – A SIS comprises of sensors, logic solvers and final elements
1ooN	SIS made up of N independent channels, which are so connected, that any single channel is sufficient to perform the correct safety instrumented function
2ooN	SIS made up of N independent channels, which are so connected, that any two of the channels are required to perform the correct safety instrumented function
MTBF	Mean Time Between Failures
MTTR	Mean Time To Repair
PFD	Probability of Failing on Demand
SCADA	Supervisory Control and Data Acquisition (Visual display screen)
P&ID	Piping & Instrument Diagram
SCH	Schedule
PTW	Permit to Work
RAMS	Risk Assessment and Method Statement

5 LIFECYCLE PHASE – STAGE 4

5.1 Proof Testing

BS EN 61511-1:2004 Clause 3.2.58 - Proof testing is a test performed to reveal undetected faults in a safety instrumented system (SIS) so that, if necessary, the SIS can be restored to its designed functionality. By revealing all undetected faults, the PFD is effectively 'reset' back to the designed value.

The purpose of the this proof testing is to reveal dangerous undetected failures and confirm the correct operation of known safe detected failures so that, if necessary, the SIS can be restored to its designed functionality. During normal operation, components of the SIS are subject to the possibility of random hardware failures. These failures may be safe failures that could lead to spurious trips or dangerous failures that may prevent the SIS operating correctly when required. Dangerous failures may not be revealed and therefore there may be no indication that these failures exist. The failure modes of all components cannot be fully accounted for therefore these can only be confidently revelled by carrying out a full end to end proof test by simulating the process conditions as closely as possible. Detected failure diagnostics not functioning correctly could result in the system not being available to operations when there is a process requirement.

Testing will be carried out in accordance with the following guidance:-

Proof testing of safety instrumented systems in the onshore chemical / specialist industry – HSE_tech_gen_48 and Principles for proof testing of safety instrumented systems in the chemical industry. Contract Research Report - 428/2002. Prepared by ABB Ltd. for the Health and Safety Executive.

The following is an extraction from the report 428/2002, Section 4.2.4 Conclusions and Recommendations:

Based on the research, the following recommendations are made:

- a method of SIS initiation should be adopted which adequately establishes that the SIS would operate under operating conditions;
- where reasonably practicable, SIS initiation should be via manipulation of the process variable using process fluids. The provision of facilities for achieving this should be considered during design of SIS;
- the initiation of SIS should not involve placing the process in a state where failure of the SIS under test could lead to a hazardous situation;
- SIS should be proof tested as found rather than being disturbed, thereby reducing the potential for unrealistic tests, loss of as found system failure data and introduction of faults on system reinstatement.

In the testing procedures we have followed these recommendation as far as possible.

Trip Initiation

The methods of initiating SIS are many and varied but whatever the method it must provide adequate confidence that the SIS would be initiated if required under operating conditions. A distinction must be drawn between manipulation of the process variable and manipulation of the process. Manipulation of the process variable without driving the process into a potentially hazardous situation should be achieved where reasonably practicable. Manipulation of the process may be necessary to provide a realistic test of functionality but this must be accompanied by a risk assessment to ensure that the probability of achieving an unsafe state remains acceptably low. Equally, any departure from realistic operating conditions during proof testing must be accounted for within the safety integrity assessment of the SIS.

It is not considered that testing of the level switches by raising the levels in the tanks will be routinely carried out. It is recommended however, that during hydrostatic testing or insurance inspections on each tank, the water level be taken up to and beyond the high level switch to prove operation of the switch in-situ. This test to be documented in accordance with the testing procedures.

5.1.1 Document Verification

Check of documentation to verify correct documentation used for testing and identify modifications to the system since the last testing phase.

5.1.2 Hardware Verification

Check to verify no unauthorised modifications have been carried out and verify physical condition and fitness for purpose.

5.1.3 Shutdown Conditions Proof Testing

Functional test of the system whilst the process is not active, e.g no flow thought final element valves, process not taken to trip point. Test switches and /or process simulation to use to complete test, this is a partial test only and may not reveal all undetected faults. System diagnostics are tested at this phase.

5.1.4 Process Conditions Proof Testing

Functional test of the SIS whilst the process is active. e.g Process is allowed to reach the trip point activating SIF to bring the process to a safe state.

5.2 Equipment Failure Proof Testing

Functional test of SIS failure modes whilst the process is not active. Testing initiated following like for like component replacement or as scheduled following as found shutdown or process conditions proof testing. Failure mode system diagnostics tested at this phase.

BS EN 61511-1:2004 Clause 5.2.6.2.2 - Management of modification procedures shall be in place to initiate, document, review, implement and approve changes to the safety instrumented system other than replacement in kind (i.e. like for like).

5.3 Preventative Maintenance

Preventative Maintenance required to keep the hardware operational and satisfy regulations.
No specific preventative maintenance activities identified.
Regulations - ATEX electrical inspections to be carried out in line with the terminals schedule.

5.4 Functional Safety Meetings / Reviews / Faults and Activations

A review should be carried following any genuine activation, spurious trip or on detection of a system fault.

5.5 Fault Reporting

Reports require generating for any system activations or on detection of faults (safe failures).
Reports should include as a minimum : -
Operations report – What happened, when, process conditions, equipment identification.
Engineers report – Rectification actions, technical description of fault, tag no's.
Manufacturers report – Assessment on the failure of a piece of the vendors equipment.

5.6 Stage 4 Operation and Maintenance Functional Safety Assessment

Stage 4 Operation and Maintenance - Function Safety Assessments to be carried out as scheduled.

6 LIFECYCLE PHASE – STAGE 5

6.1 Stage 5 Modification Functional Safety Assessment

Stage 5 Modification - Function Safety Assessment to be carried out prior to any system modification, testing phases to be allocated at Stage 5 FSA as required.

7 RESPONSIBILITIES

The system is owned by ISCo (System Keeper). The testing and acceptance is the responsibility of the system owners. The testing is to be performed by a competent technician appointed by the system keeper. It is the responsibility of ISCo to make the tanks available for testing. ISCo is responsible for the issuing, accepting and signing off of "Permits to Work" under their current health and safety procedures. ISCo is responsible for initiating testing prior to and following maintenance.

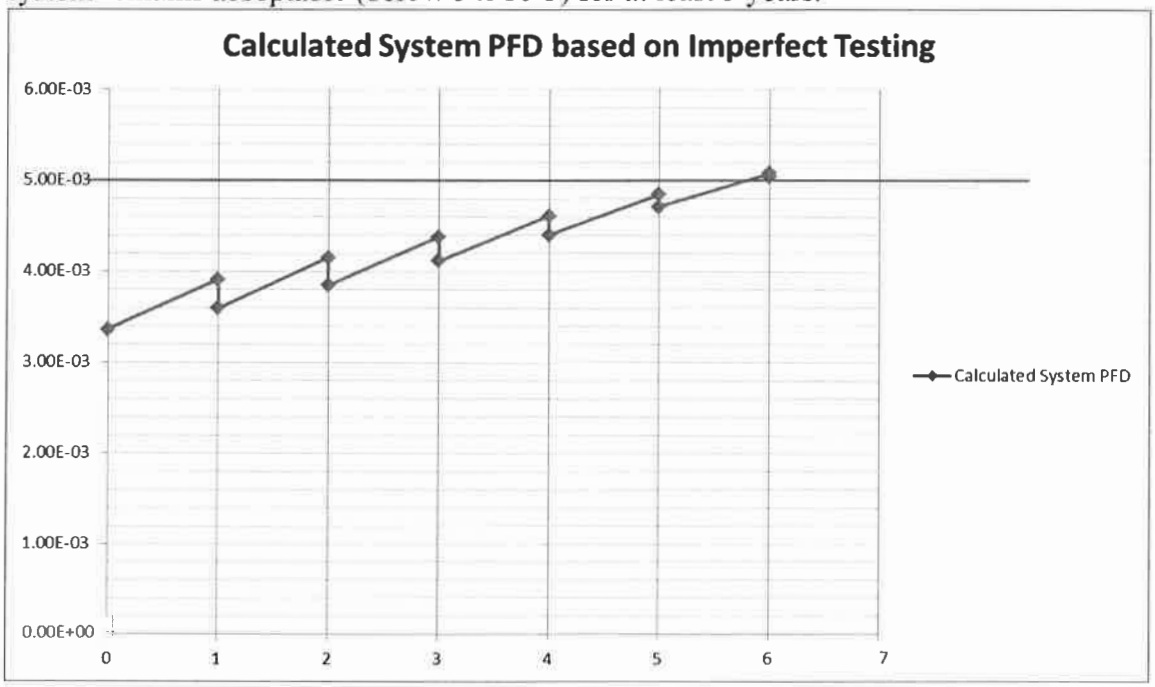
It is the responsibility of the system keeper to report any defects of SIL rated equipment to the manufacturer. The system keeper is also responsible for maintaining the life cycle documentation relating to this procedure.

8 SCHEDULING

Reference \ Frequency		Prior to Proof Testing	12 Monthly	60 Monthly	Following System Fault	Following System Activation	Authorised Modification
SI483017_RPT - Documentation Verification		✓	✓		✓		
SI483018_RPT - Shutdown Conditions Proof Testing	Test Switch		✓		✓		
	Full Test			✓	✓		
SI483021_RPT - Process Conditions Proof Testing				✓			
SI483019_RPT - Equipment Failure Proof Testing					✓		
SI483020_RPT - Preventative Maintenance							
Fault Reporting					✓	✓	
Stage 4 Functional Safety Assessment				✓			
Stage 5 Functional Safety Assessment							✓
SI483015_RPT - Operation, Maintenance and Modification Lifecycle		✓	✓	✓	✓	✓	✓

N.B Testing required if any part of the system disturbed, replaced or maintained outside of the above schedule.

The Safe Fail Fraction of the Liquiphant level switch is 91%. Thus as a worst case, if all dangerous undetected failures are not detected during the annual test, the proof test coverage can be assumed as 91%. For this case, the following graph shows that the PFDcalc for the system remains acceptable (below 5 x 10-3) for at least 5 years.



Proof Testing Flowchart

1 REVISION HISTORY

Rev	Description
A	Original Issue

This document will be revised with any additions to or removals from IME-SIS1 throughout the operational lifecycle of the system.

2 INTRODUCTION

This document provides a procedure for documentation verification to ensure that the Safety Instrument System Life Cycle complies with the requirements of the standard BS EN 61511.

3 SCOPE

Client / Company	-	Immingham Storage Co Ltd
Location / Facility	-	ISCo East Terminal
Plant Unit	-	Tanks 561, 564 & 568
Service	-	No4 East Storage Tank Overfill Protection
SIS Tag No	-	IME-SIS1
SIF's Tag No's	-	TK561-SIF1, TK564-SIF1 & TK568-SIF1
SIL	-	2

Lifecycle Stages

Operation and Maintenance	-	BS EN 61511 Clause 16

Audience
This document has been produced for use by competent persons knowledgeable in testing Safety Instrumented Systems.

Brief System Description
IME-SIS1 under test is to prevent the overfill of storage tanks 561, 564 & 568 when on import duty. The system is classified as SIL2.
Full system description in documentation reference SI277001_RPT – IME-SIS1 Safety Instrument System and Piping & Instrument Diagrams – IME-K-0028 – Tank 561, IME-K-0052 – Tank 564 & IME-K-0050 – Tank 568.

Procedure
This procedure outlines the necessary steps required to verify the correct documentation used for testing and identify modifications to the system since the last testing phase.

Detailed in this report are the methods of test for documentation associated with IME-SIS1. The results of these tests will be recorded in this report, historical data will be recorded and approved as satisfactory in report reference SI483015_RPT - IME-SIS1 Operation, Maintenance and Modification Lifecycle.

All faults should be reported to the system keeper. If further work is required the system keeper will initiate it.

4 DEFINITIONS AND ABBREVIATIONS

The following definitions and abbreviations apply to this document.

BPCS	Basic Process Control System
Logic Solver	Part of the SIS that performs one or more logic functions, e.g. safety relay, trip amplifier
Proof Test	Periodic testing to detect failures in a safety instrumented system
Protection Layer	A mechanism that reduces risk by control, prevention or mitigation
Sensor	Part of the SIS which measures the process condition
SIF	Safety Instrumented Function – A function with a specified safety integrity level which is necessary to achieve functional safety
SIL	Safety integrity level – A numerical number, 1 to 4 stipulating the level of integrity the system shall perform to, 1 being the lowest 4 the highest
SIS	Safety Instrument System – A SIS comprises of sensors, logic solvers and final elements
1ooN	SIS made up of N independent channels, which are so connected, that any single channel is sufficient to perform the correct safety instrumented function
2ooN	SIS made up of N independent channels, which are so connected, that any two of the channels are required to perform the correct safety instrumented function
MTBF	Mean Time Between Failures
MTTR	Mean Time To Repair
PFD	Probability of Failing on Demand
SCADA	Supervisory Control and Data Acquisition (Visual display screen)
P&ID	Piping & Instrument Diagram
SCH	Schedule
PTW	Permit to Work

5 PREPARATION

Controlled copies of the following documentation will be required :-
SI483015_RPT - IME-SIS1 Operation, Maintenance and Modification Lifecycle
SI483001_REG - IME-SIS1 Report Register
SI483002_REG - IME-SIS1 Instrument Specification Register
SI483003_REG - IME-SIS1 Drawing Register
SI483004_REG - IME-SIS1 Calculation Register

A controlled copy of this procedure will be used to carry out the testing and will form part of the lifecycle testing documentation.
Controlled copies of all documentation required for testing to be attached.

6 DOCUMENTATION VERIFICATION

Purpose of Test
Pre physical on site testing check of documentation to verify correct documentation to be used for testing and identify modifications to the system since last testing phase. *Incorrect or updated documentation may lead to incomplete testing or undesirable effects on other site systems and terminal operation.*
Controlled Copy Documentation Required
SI483015_RPT - IME-SIS1 Operation, Maintenance and Modification Lifecycle SI483001_REG - IME-SIS1 Report Register SI483002_REG - IME-SIS1 Instrument Specification Register SI483003_REG - IME-SIS1 Drawing Register SI483004_REG - IME-SIS1 Calculation Register

Step	Method of Test	Acceptance Criteria	Pass (✓) Fail (x) Initial
6.1	Compare system documentation to registers. Highlight documentation checked on controlled copy of registers. Review changes since last testing phase as documented in SI483015_RPT - IME-SIS1 Operation, Maintenance and Modification Lifecycle.	Documentation available and auditable. Documentation revisions reflect installed system. *Comment any issues in section 6.2 and review / rectify prior to starting site work*	✓
6.2	Comments/Defects/ Remedial Actions – Report ALL to System Keeper

1 REVISION HISTORY

Rev	Description
A	Original Issue

This document will be revised with any additions to or removals from IME-SIS1 throughout the operational lifecycle of the system.

2 INTRODUCTION

This document provides a procedure for shutdown condition functional proof testing to ensure that the Safety Instrument System Life Cycle complies with the requirements of the standard BS EN 61511.

3 SCOPE

Client / Company	-	Immingham Storage Co Ltd
Location / Facility	-	ISCo East Terminal
Plant Unit	-	Tanks 561, 564 & 568
Service	-	No4 East Storage Tank Overfill Protection
SIS Tag No	-	IME-SIS1
SIF's Tag No's	-	TK561-SIF1, TK564-SIF1 & TK568-SIF1
SIL	-	2

Lifecycle Stages

Operation and Maintenance	-	BS EN 61511 Clause 16

Audience

This document has been produced for use by competent persons knowledgeable in testing Safety Instrumented Systems.

Brief System Description

IME-SIS1 under test is to prevent the overfill of storage tanks 561, 564 & 568 when on import duty. The system is classified as SIL2.

Full system description in documentation reference SI277001_RPT – IME-SIS1 Safety Instrument System and Piping & Instrument Diagrams – IME-K-0028 – Tank 561, IME-K-0052 – Tank 564 & IME-K-0050 – Tank 568.

Procedure

This procedure outlines the necessary steps required to verify the correct equipment is installed, the physical condition of the installed equipment and the functional operation performs the SIF's as designed.

Detailed in this report are the methods of test for each SIF.

The results of these tests will be recorded in this report, historical data will be recorded and approved as satisfactory in report reference SI483015_RPT - IME-SIS1 Operation, Maintenance and Modification Lifecycle.

This report details shutdown condition testing whilst no transfer to the tanks is in operation.

All faults should be reported to the system keeper, with minor repairs carried out if practicable. If further maintenance work is required the system keeper will initiate it.

4 DEFINITIONS AND ABBREVIATIONS

The following definitions and abbreviations apply to this document.

BPCS	Basic Process Control System
Logic Solver	Part of the SIS that performs one or more logic functions, e.g. safety relay, trip amplifier
Proof Test	Periodic testing to detect failures in a safety instrumented system
Protection Layer	A mechanism that reduces risk by control, prevention or mitigation
Sensor	Part of the SIS which measures the process condition
SIF	Safety Instrumented Function – A function with a specified safety integrity level which is necessary to achieve functional safety
SIL	Safety integrity level – A numerical number, 1 to 4 stipulating the level of integrity the system shall perform to, 1 being the lowest 4 the highest
SIS	Safety Instrument System – A SIS comprises of sensors, logic solvers and final elements
1ooN	SIS made up of N independent channels, which are so connected, that any single channel is sufficient to perform the correct safety instrumented function
2ooN	SIS made up of N independent channels, which are so connected, that any two of the channels are required to perform the correct safety instrumented function
MTBF	Mean Time Between Failures
MTTR	Mean Time To Repair
PFD	Probability of Failing on Demand
SCADA	Supervisory Control and Data Acquisition (Visual display screen)
P&ID	Piping & Instrument Diagram
SCH	Schedule
PTW	Permit to Work
RAMS	Risk Assessment and Method Statement

5 PREPARATION

All Health and Safety / Permit To Work systems must be implemented before commencing testing. SI483012_RPT - IME-SIS1 RAMS is to be submitted for approval prior to the site testing.

IME-SIS1 is completely independent of the BPCS, no overrides or special preparations are required to facilitate uncompromised testing.

Controlled copies of the following documentation will be required :-
SI483015_RPT - IME-SIS1 Operation, Maintenance and Modification Lifecycle
SI483018_RPT - IME-SIS1 Shutdown Conditions Proof Testing
SI483010_SCH - IME-SIS1 Instrument Schedule
SI483012_SCH - IME-SIS1 Trip Matrix
SI483001_DWG - Tanks 561, 564 & 568 Cable Overview
IME-K-0028 – Tank 561 P&ID
IME-K-0052 – Tank 564 P&ID
IME-K-0050 – Tank 568 P&ID

SI483017_RPT - IME-SIS1 Documentation Verification to be completed prior to each period of testing to confirm correct revisions of documentation.

A controlled copy of this procedure will be used to carry out the testing and will form part of the lifecycle testing documentation.
Controlled copies of all documentation required for testing to be attached. In addition to procedures documented in this report calibration certificates, engineers reports are to be issued to each item as applicable.

6 HARDWARE VERIFICATION

Purpose of Test
To verify the correct equipment is fitted and no unauthorised modifications have been carried out. To verify equipment physical condition and fitness for purpose. *Equipment may not function correctly if damaged or modified.* *Equipment not identified as SIS may not be reported to the system keeper following works by maintenance / contractors.* *To ensure correct designed/rated equipment is installed.*
Controlled Copy Documentation Required
SI483010_SCH - IME-SIS1 Instrument Schedule SI483012_SCH – IME-SIS1 Trip Matrix SI483001_DWG - Tanks 561, 564 & 568 Cable Overview IME-K-0028 – Tank 561 P&ID IME-K-0052 – Tank 564 P&ID IME-K-0050 – Tank 568 P&ID

Step	Method of Test	Acceptance Criteria	Pass (✓) Fail (x) Initial
6.1	Review procedure with operations and testing personnel.	All personnel familiarised with the scope of works and responsibilities. *Comment any issues in section 6.6 and review / rectify prior to starting testing.*	✓
6.2	Confirm plant preparations satisfactory. *Record PTW No* COLD 07146	Conditions satisfied as detailed on PTW and RAMS. *Comment any issues in section 6.6 and review / rectify prior to starting site work*	✓
6.3	Confirm equipment has not been replaced by comparing against information on SCH. Record method used to identify equipment on controlled copy of SCH Highlight column, e.g. SIS Tag / Serial No etc.	Equipment identified as SCH, Labelling and tagging correct. SIS identification correct. *Comment observations in section 6.6.*	✓
6.4	Confirm no visible signs of system and equipment modification, relocation, or not fit for purpose by comparing against controlled copy of SCH, P&ID and configuration. Highlight equipment checked on controlled copy of SCH & P&ID.	No visible signs of unauthorised modification or relocation. Equipment is clean and of sound physical condition, mountings, cable entries and process connections are fit for designed purpose with unrestricted access. *Comment observations in section 6.6.*	SI483. SAT. AUTHORISED MODIFICATION ✓
6.5	Confirm no visible signs of additional plant or parallel systems which could affect the SIS or invalidate testing.	No new additional plant equipment or BPCS systems. *Comment any issues in section 6.6.and review / rectify prior to starting functional testing.*	AS6.4 ✓

7 AS FOUND FUNCTIONAL PROOF TESTING PROCEDURE

7.1 TK561-SIF1 - Tank 561 As Found Functional Testing

Purpose of Test
To verify the as found operation of LE56101 Tank 561 Independent high high level trip closes XV56101 FINAL ELEMENT valve. To verify the as found Manual Shutdown functions of Tank 561 FINAL ELEMENT XV56101 valve. To verify the correct DIAGNOSTICS information. *If sensing element defective the tank could overfill if a demand is made on the overfill protection system.* *If manual shutdown systems defective the FINAL ELEMENT could fail to close if a demand is made on the terminal shutdown systems.* *If response target time is exceeded the tank could overfill following demand.* *If FINAL ELEMENT travel time is reduced excessive pipeline surge pressure could be generated.* *Diagnostic information not displayed correctly could result in undetected tank overfill, system unavailability or incorrect operational response.*
Controlled Copy Documentation Required
SI483012_SCH – IME-SIS1 Trip Matrix

Step	Method of Test	Acceptance Criteria	Pass (✓) Fail (x) Initial
7.1.1	Review procedure with operations and testing personnel.	All personnel familiarised with the scope of works and responsibilities. *Comment any issues in section 7.1.12 and review / rectify prior to starting testing.*	✓
7.1.2	Confirm plant preparations satisfactory. *Record PTW No.* COLD 09416.	Conditions satisfied as detailed on PTW and RAMS. *Comment any issues in section 7.1.12 and review / rectify prior to starting testing.*	✓
7.1.3	Confirm system healthy and reset.	System healthy and reset as detailed on SI4830 13_SCH Sheet 1. *Comment differences from SCH or if found in tripped state in section 7.1.12.*	✓
7.1.3	XV56101 is normally in the open position, if found closed open via local manual isolation switch. (confirm acceptance criteria @ step 7.1.7 if found open) FOUND OPEN.	Valve action found smooth. *Comment poor action / sticking in section 7.1.12.*	N/A.
		Opening time – No specific requirement. *Comment times > 120 seconds in section 7.1.12.*	N/A.
		Correct FINAL ELEMENT valve position and DIAGNOSTICS as detailed on SI4830 12_SCH Sheet 1. *Comment differences from SCH in section 7.1.12.*	N/A.

7.2 TK564-SIF1 - Tank 564 As Found Functional Testing

Purpose of Test
To verify the as found operation of LE56401 Tank 564 Independent high high level trip closes XV56401 FINAL ELEMENT valve. To verify the as found Manual Shutdown functions of Tank 564 FINAL ELEMENT XV56401 valve. To verify the correct DIAGNOSTICS information. *If sensing element defective the tank could overfill if a demand is made on the overfill protection system.* *If manual shutdown systems defective the FINAL ELEMENT could fail to close if a demand is made on the terminal shutdown systems.* *If response target time is exceeded the tank could overfill following demand.* *If FINAL ELEMENT travel time is reduced excessive pipeline surge pressure could be generated.* *Diagnostic information not displayed correctly could result in undetected tank overfill, system unavailability or incorrect operational response.*
Controlled Copy Documentation Required

1 REVISION HISTORY

Rev	Description
A	Original Issue

This document will be revised with any additions to or removals from IME-SIS1 throughout the operational lifecycle of the system.

2 INTRODUCTION

This document provides a procedure for equipment failure functional proof testing to ensure that the Safety Instrument System Life Cycle complies with the requirements of the standard BS EN 61511.

3 SCOPE

Client / Company	-	Immingham Storage Co Ltd
Location / Facility	-	ISCo East Terminal
Plant Unit	-	Tanks 561, 564 & 568
Service	-	No4 East Storage Tank Overfill Protection
SIS Tag No	-	IME-SIS1
SIF's Tag No's	-	TK561-SIF1, TK564-SIF1 & TK568-SIF1
SIL	-	2

Lifecycle Stages

Operation and Maintenance	-	BS EN 61511 Clause

Audience

This document has been produced for use by competent persons knowledgeable in testing Safety Instrument Systems.

Brief System Description

IME-SIS1 under test is to prevent the overfill of storage tanks 561, 564 & 568 when on import duty. The system is classified as SIL2.
Full system description in documentation reference SI277001_RPT – IME-SIS1 Safety Instrument System and Piping & Instrument Diagrams – IME-K-0028 – Tank 561, IME-K-0052 – Tank 564 & IME-K-0050 – Tank 568.

Procedure

This procedure outlines the necessary steps required to verify the correct equipment is installed, the physical condition of the installed equipment and the functional operation performs the SIF's as designed.

Detailed in this report are the methods of test for each SIF.

The results of these tests will be recorded in this report, historical data will be recorded and approved as satisfactory in report reference SI483015_RPT - IME-SIS1 Operation, Maintenance and Modification Lifecycle.

This report details equipment failure testing whilst no transfer to the tanks is in operation.

All faults should be reported to the system keeper, with minor repairs carried out if practicable. If further maintenance work is required the system keeper will initiate it.

4 DEFINITIONS AND ABBREVIATIONS

The following definitions and abbreviations apply to this document.

BPCS	Basic Process Control System
Logic Solver	Part of the SIS that performs one or more logic functions, e.g. safety relay, trip amplifier
Proof Test	Periodic testing to detect failures in a safety instrumented system
Protection Layer	A mechanism that reduces risk by control, prevention or mitigation
Sensor	Part of the SIS which measures the process condition
SIF	Safety Instrumented Function – A function with a specified safety integrity level which is necessary to achieve functional safety
SIL	Safety integrity level – A numerical number, 1 to 4 stipulating the level of integrity the system shall perform to, 1 being the lowest 4 the highest
SIS	Safety Instrument System – A SIS comprises of sensors, logic solvers and final elements
1ooN	SIS made up of N independent channels, which are so connected, that any single channel is sufficient to perform the correct safety instrumented function
2ooN	SIS made up of N independent channels, which are so connected, that any two of the channels are required to perform the correct safety instrumented function
MTBF	Mean Time Between Failures
MTTR	Mean Time To Repair
PFD	Probability of Failing on Demand
SCADA	Supervisory Control and Data Acquisition (Visual display screen)
P&ID	Piping & Instrument Diagram
SCH	Schedule
PTW	Permit to Work
RAMS	Risk Assessment and Method Statement

5 PREPARATION

All Health and Safety / Permit To Work systems must be implemented before commencing testing. SI483012_RPT - IME-SIS1 RAMS is to be submitted for approval prior to the site testing.

IME-SIS1 is completely independent of the BPCS, no overrides or special preparations are required to facilitate uncompromised testing.

Controlled copies of the following documentation will be required :-
SI483015_RPT - IME-SIS1 Operation, Maintenance and Modification Lifecycle
SI483019_RPT - IME-SIS1 Equipment Failure Proof Testing Procedure
SI483010_SCH - IME-SIS1 Instrument Schedule
SI483012_SCH - IME-SIS1 Trip Matrix

SI483017_RPT - IME-SIS1 Documentation Verification to be completed prior to each period of testing to confirm correct revisions of documentation.

SI208018_RPT - IME-SIS1 Shutdown Conditions Proof Testing Procedure to be completed prior to each period of testing to confirm the as found condition.

SECTION 6 – HARDWARE VERIFICATION not required if equipment failure testing is part of a scheduled proof test.
Hardware verification to be completed for the relevant equipment following authorised modifications or like for like equipment replacement following failure

A controlled copy of this procedure will be used to carry out the testing and will form part of the lifecycle testing documentation.
Controlled copies of all documentation required for testing to be attached. In addition to procedures documented in this report calibration certificates, engineers reports are to be issued to each item as applicable.

6 HARDWARE VERIFICATION

Purpose of Test			
To verify the correct equipment is fitted and no unauthorised modifications have been carried out. To verify equipment physical condition and fitness for purpose. *Equipment may not function correctly if damaged or modified.* *Equipment not identified as SIS may not be reported to the system keeper following works by maintenance / contractors.* *To ensure correct designed/rated equipment is installed.*			
Controlled Copy Documentation Required			
SI483010_SCH - IME-SIS1 Instrument Schedule SI483012_SCH – IME-SIS1 Trip Matrix SI483001_DWG - Tanks 561, 564 & 568 Cable Overview IME-K-0028 – Tank 561 P&ID IME-K-0052 – Tank 564 P&ID IME-K-0050 – Tank 568 P&ID			
Step	**Method of Test**	**Acceptance Criteria**	**Pass (✓) Fail (x) Initial**
6.1	Review procedure with operations and testing personnel.	All personnel familiarised with the scope of works and responsibilities. *Comment any issues in section 6.6 and review / rectify prior to starting testing.*	
6.2	Confirm plant preparations satisfactory. *Record PTW No……*	Conditions satisfied as detailed on PTW and RAMS. *Comment any issues in section 6.6 and review / rectify prior to starting site work*	
6.3	Confirm equipment has not been replaced by comparing against information on SCH. Record method used to identify equipment on controlled copy of SCH Highlight column, e.g. SIS Tag / Serial No etc.	Equipment identified as SCH, Labelling and tagging correct. SIS identification correct. *Comment observations in section 6.6.*	
6.4	Confirm no visible signs of system and equipment modification, relocation, or not fit for purpose by comparing against controlled copy of SCH, P&ID and configuration. Highlight equipment checked on controlled copy of SCH & P&ID.	No visible signs of unauthorised modification or relocation. Equipment is clean and of sound physical condition, mountings, cable entries and process connections are fit for designed purpose with unrestricted access. *Comment observations in section 6.6.*	
6.5	Confirm no visible signs of additional plant or parallel systems which could affect the SIS or invalidate testing.	No new additional plant equipment or BPCS systems. *Comment any issues in section 6.6.and review / rectify prior to starting functional testing.*

7 FAILURE MODE TESTING PROCEDURE

7.1 Failure Mode Functional Testing

Purpose of Test			
To verify the correct FAILURE MODES of IME-SIS1. To verify correct failure DIAGNOSTICS information. *Incorrect system / component configuration may not detect fault modes.* *Diagnostic information not displayed correctly could result in undetected tank overfill, system unavailability or incorrect operational response.*			
Controlled Copy Documentation Required

8 AS LEFT FUNCTIONAL PROOF TESTING PROCEDURE

8.1 TK561-SIF1 - Tank 561 As Left Functional Testing

Purpose of Test
To verify the as left operation of LE56101 Tank 561 Independent high high level trip closes XV56101 FINAL ELEMENT valve following system disturbance. To verify the as left Manual Shutdown functions of Tank 561 FINAL ELEMENT XV56101. To verify the correct DIAGNOSTICS information. *If sensing element defective the tank could overfill if a demand is made on the overfill protection system.* *If manual shutdown systems defective the FINAL ELEMENT could fail to close if a demand is made on the terminal shutdown systems.* *If response target time is exceeded the tank could overfill following demand.* *If FINAL ELEMENT travel time is reduced excessive pipeline surge pressure could be generated.* *Diagnostic information not displayed correctly could result in undetected tank overfill, system unavailability or incorrect operational response.*
Controlled Copy Documentation Required

Instrument Loop Test Sheet Certificate

Certificate Number: LE56101

Client:	Immingham Storage Co. Ltd	**Date:**	2/7/14.	**Loop No:**	LE56101
Location:	ISCo East	**Service:**	Tank 561 High High Level		
Project No:	SI483	**Project:**	SIS Restructuring	**Loop Drg No:**	SI483020_DWG_A

Cap No	Serial No	Test Equipment	Cap No	Serial No	Test Equipment
1			3		
2			4		

Test Equipment Traceable to NPL Standards.

Method of Test

Prepared By: D.B.Faulkner **Approved By:** M.Morgan

This equipment is part of a SAFETY INSTRUMENT SYSTEM. All testing, repairs and modifications must be in accordance with BS EN 61511
Refer to SI483003_RPT - 500 Series Tank Farm Management of Functional Safety report prior to commencing testing.
Note - Listed trips also trip other equipment/processes on the terminal and will activate the terminal annunciator system.
1. Confirm no affected operations in progress and permit to work issued. Record Permit No . 07446
2. Confirm level below trip point, SIS reset and system healthy.
3. Remove probe and immerse in suitable liquid AND/OR operate Nivotester pushbutton. Record method used.
4. Confirm correct annunciator, VTW and Radio broadcast actions.
5. Reinstall probe if removed, confirm healthy and reset SIS.
Report Faults and anomalies

Instrument Loop Test Sheet Certificate

Certificate Number: XV56801

Client:	Immingham Storage Co. Ltd	**Date:**	2/7/14.	**Loop No:**	XV56801
Location:	ISCo East	**Service:**	Tank 568 Import Valve		
Project No:	SI483	**Project:**	SIS Restructuring	**Loop Drg No:**	SI483025_DWG_A

Cap No	Serial No	Test Equipment	Cap No	Serial No	Test Equipment
1	#Error	#Error	3	#Error	#Error
2	#Error	#Error	4	#Error	#Error

Test Equipment Traceable to NPL Standards.

Method of Test

Prepared By: D.B.Faulkner **Approved By:** M.Morgan

This equipment is part of a SAFETY INSTRUMENT SYSTEM, All testing, repairs and modifications must be in accordance with BS EN 61511
Refer to SI483003_RPT - 500 Series Tank Farm Management of Functional Safety report prior to commencing testing.
Note - Listed trips also trip other equipment/processes on the terminal and will activate the terminal annunciator system.
1. Confirm no affected operations in progress and permit to work issued. Record Permit No 09416
2. Confirm all alarms & trips healthy. Select OPEN on local hand switch, confirm valve physically opens. Record times, OPEN selected to fully open (C>O), traveling time (TravO) and comment movement.
3. Trip valve via SIS HIHI level by operation of Nivotester test facility. Confirm valve physically closes, record times from trip to fully closed (O>C), travelling time (TravC) and comment movement. Reset SIS, confirm valve physically opens, record times from reset to fully open (C>O), travelling time (TravO) and comment movement
4. Activate Local Bund Isolation Pushbutton confirming valve physically closes on activation and reopens on Isolation healthy.
Report Faults and anomalies

1 REVISION HISTORY

Rev	Description
A	Original Issue

This document will be revised with any additions to or removals from IME-SIS1 throughout the operational lifecycle of the system.

2 INTRODUCTION

This document provides a procedure for documentation verification to ensure that the Safety Instrument System Life Cycle complies with the requirements of the standard BS EN 61511.

3 SCOPE

Client / Company	-	Immingham Storage Co Ltd
Location / Facility	-	ISCo East Terminal
Plant Unit	-	Tanks 561, 564 & 568
Service	-	No4 East Storage Tank Overfill Protection
SIS Tag No	-	IME-SIS1
SIF's Tag No's	-	TK561-SIF1, TK564-SIF1 & TK568-SIF1
SIL	-	2

Lifecycle Stages

Operation and Maintenance	-	BS EN 61511 Clause 16

Audience
This document has been produced for use by competent persons knowledgeable in testing Safety Instrumented Systems.

Brief System Description
IME-SIS1 under test is to prevent the overfill of storage tanks 561, 564 & 568 when on import duty. The system is classified as SIL2.
Full system description in documentation reference SI277001_RPT – IME-SIS1 Safety Instrument System and Piping & Instrument Diagrams – IME-K-0028 – Tank 561, IME-K-0052 – Tank 564 & IME-K-0050 – Tank 568.

Procedure
This procedure outlines the necessary steps required to verify the correct documentation used for testing and identify modifications to the system since the last testing phase.

Detailed in this report are the methods of test for documentation associated with IME-SIS1. The results of these tests will be recorded in this report, historical data will be recorded and approved as satisfactory in report reference SI483015_RPT - IME-SIS1 Operation, Maintenance and Modification Lifecycle.

All faults should be reported to the system keeper. If further work is required the system keeper will initiate it.

4 DEFINITIONS AND ABBREVIATIONS

The following definitions and abbreviations apply to this document.

BPCS	Basic Process Control System
Logic Solver	Part of the SIS that performs one or more logic functions, e.g. safety relay, trip amplifier
Proof Test	Periodic testing to detect failures in a safety instrumented system
Protection Layer	A mechanism that reduces risk by control, prevention or mitigation
Sensor	Part of the SIS which measures the process condition
SIF	Safety Instrumented Function – A function with a specified safety integrity level which is necessary to achieve functional safety
SIL	Safety integrity level – A numerical number, 1 to 4 stipulating the level of integrity the system shall perform to, 1 being the lowest 4 the highest
SIS	Safety Instrument System – A SIS comprises of sensors, logic solvers and final elements
1ooN	SIS made up of N independent channels, which are so connected, that any single channel is sufficient to perform the correct safety instrumented function
2ooN	SIS made up of N independent channels, which are so connected, that any two of the channels are required to perform the correct safety instrumented function
MTBF	Mean Time Between Failures
MTTR	Mean Time To Repair
PFD	Probability of Failing on Demand
SCADA	Supervisory Control and Data Acquisition (Visual display screen)
P&ID	Piping & Instrument Diagram
SCH	Schedule
PTW	Permit to Work

5 PREPARATION

Controlled copies of the following documentation will be required :-
SI483015_RPT - IME-SIS1 Operation, Maintenance and Modification Lifecycle
SI483001_REG - IME-SIS1 Report Register
SI483002_REG - IME-SIS1 Instrument Specification Register
SI483003_REG - IME-SIS1 Drawing Register
SI483004_REG - IME-SIS1 Calculation Register

A controlled copy of this procedure will be used to carry out the testing and will form part of the lifecycle testing documentation.
Controlled copies of all documentation required for testing to be attached.

6 DOCUMENTATION VERIFICATION

Purpose of Test
Pre physical on site testing check of documentation to verify correct documentation to be used for testing and identify modifications to the system since last testing phase. *Incorrect or updated documentation may lead to incomplete testing or undesirable effects on other site systems and terminal operation.*
Controlled Copy Documentation Required
SI483015_RPT - IME-SIS1 Operation, Maintenance and Modification Lifecycle SI483001_REG - IME-SIS1 Report Register SI483002_REG - IME-SIS1 Instrument Specification Register SI483003_REG - IME-SIS1 Drawing Register SI483004_REG - IME-SIS1 Calculation Register

Step	Method of Test	Acceptance Criteria	Pass (✓) Fail (x) Initial
6.1	Compare system documentation to registers. Highlight documentation checked on controlled copy of registers. Review changes since last testing phase as documented in SI483015_RPT - IME-SIS1 Operation, Maintenance and Modification Lifecycle.	Documentation available and auditable. Documentation revisions reflect installed system. *Comment any issues in section 6.2 and review / rectify prior to starting site work*	✓
6.2	Comments/Defects/ Remedial Actions – Report ALL to System Keeper		

Tested by	Position	Qualification	Sign	Date
DBFALKNER	INST ENG (RTJ)	ISA FSS.		03/07/15

System Keeper Acknowledgement

(Note: Signature confirms System keeper is advised of Comments/Defects/Remedial Actions and will initiate terminal procedures for rectification works and/or isolation of plant as required)

Accepted by	Position	Qualification	Sign	Date

1 REVISION HISTORY

Rev	Description
A	Original Issue

This document will be revised with any additions to or removals from IME-SIS1 throughout the operational lifecycle of the system.

2 INTRODUCTION

This document provides a procedure for shutdown condition functional proof testing to ensure that the Safety Instrument System Life Cycle complies with the requirements of the standard BS EN 61511.

3 SCOPE

Client / Company	-	Immingham Storage Co Ltd
Location / Facility	-	ISCo East Terminal
Plant Unit	-	Tanks 561, 564 & 568
Service	-	No4 East Storage Tank Overfill Protection
SIS Tag No	-	IME-SIS1
SIF's Tag No's	-	TK561-SIF1, TK564-SIF1 & TK568-SIF1
SIL	-	2

Lifecycle Stages

Operation and Maintenance	-	BS EN 61511 Clause 16

Audience

This document has been produced for use by competent persons knowledgeable in testing Safety Instrumented Systems.

Brief System Description

IME-SIS1 under test is to prevent the overfill of storage tanks 561, 564 & 568 when on import duty. The system is classified as SIL2.
Full system description in documentation reference SI277001_RPT – IME-SIS1 Safety Instrument System and Piping & Instrument Diagrams – IME-K-0028 – Tank 561, IME-K-0052 – Tank 564 & IME-K-0050 – Tank 568.

Procedure

This procedure outlines the necessary steps required to verify the correct equipment is installed, the physical condition of the installed equipment and the functional operation performs the SIF's as designed.

Detailed in this report are the methods of test for each SIF.

The results of these tests will be recorded in this report, historical data will be recorded and approved as satisfactory in report reference SI483015_RPT - IME-SIS1 Operation, Maintenance and Modification Lifecycle.

This report details shutdown condition testing whilst no transfer to the tanks is in operation.

All faults should be reported to the system keeper, with minor repairs carried out if practicable. If further maintenance work is required the system keeper will initiate it.

4 DEFINITIONS AND ABBREVIATIONS

The following definitions and abbreviations apply to this document.

BPCS	Basic Process Control System
Logic Solver	Part of the SIS that performs one or more logic functions, e.g. safety relay, trip amplifier
Proof Test	Periodic testing to detect failures in a safety instrumented system
Protection Layer	A mechanism that reduces risk by control, prevention or mitigation
Sensor	Part of the SIS which measures the process condition
SIF	Safety Instrumented Function – A function with a specified safety integrity level which is necessary to achieve functional safety
SIL	Safety integrity level – A numerical number, 1 to 4 stipulating the level of integrity the system shall perform to, 1 being the lowest 4 the highest
SIS	Safety Instrument System – A SIS comprises of sensors, logic solvers and final elements
1ooN	SIS made up of N independent channels, which are so connected, that any single channel is sufficient to perform the correct safety instrumented function
2ooN	SIS made up of N independent channels, which are so connected, that any two of the channels are required to perform the correct safety instrumented function
MTBF	Mean Time Between Failures
MTTR	Mean Time To Repair
PFD	Probability of Failing on Demand
SCADA	Supervisory Control and Data Acquisition (Visual display screen)
P&ID	Piping & Instrument Diagram
SCH	Schedule
PTW	Permit to Work
RAMS	Risk Assessment and Method Statement

5 PREPARATION

All Health and Safety / Permit To Work systems must be implemented before commencing testing. SI483012_RPT - IME-SIS1 RAMS is to be submitted for approval prior to the site testing.

IME-SIS1 is completely independent of the BPCS, no overrides or special preparations are required to facilitate uncompromised testing.

Controlled copies of the following documentation will be required :-
SI483015_RPT - IME-SIS1 Operation, Maintenance and Modification Lifecycle
SI483018_RPT - IME-SIS1 Shutdown Conditions Proof Testing
SI483010_SCH - IME-SIS1 Instrument Schedule
SI483012_SCH - IME-SIS1 Trip Matrix
SI483001_DWG - Tanks 561, 564 & 568 Cable Overview
IME-K-0028 – Tank 561 P&ID
IME-K-0052 – Tank 564 P&ID
IME-K-0050 – Tank 568 P&ID

SI483017_RPT - IME-SIS1 Documentation Verification to be completed prior to each period of testing to confirm correct revisions of documentation.

A controlled copy of this procedure will be used to carry out the testing and will form part of the lifecycle testing documentation.
Controlled copies of all documentation required for testing to be attached. In addition to procedures documented in this report calibration certificates, engineers reports are to be issued to each item as applicable.

6 HARDWARE VERIFICATION

Purpose of Test			
To verify the correct equipment is fitted and no unauthorised modifications have been carried out. To verify equipment physical condition and fitness for purpose. *Equipment may not function correctly if damaged or modified.* *Equipment not identified as SIS may not be reported to the system keeper following works by maintenance / contractors.* *To ensure correct designed/rated equipment is installed.*			
Controlled Copy Documentation Required			
SI483010_SCH - IME-SIS1 Instrument Schedule SI483012_SCH – IME-SIS1 Trip Matrix SI483001_DWG - Tanks 561, 564 & 568 Cable Overview IME-K-0028 – Tank 561 P&ID IME-K-0052 – Tank 564 P&ID IME-K-0050 – Tank 568 P&ID			
Step	**Method of Test**	**Acceptance Criteria**	**Pass (✓) Fail (x) Initial**
6.1	Review procedure with operations and testing personnel.	All personnel familiarised with the scope of works and responsibilities. *Comment any issues in section 6.6 and review / rectify prior to starting testing.*	
6.2	Confirm plant preparations satisfactory. *Record PTW No.* COLD 05965	Conditions satisfied as detailed on PTW and RAMS. *Comment any issues in section 6.6 and review / rectify prior to starting site work*	
6.3	Confirm equipment has not been replaced by comparing against information on SCH. Record method used to identify equipment on controlled copy of SCH Highlight column, e.g. SIS Tag / Serial No etc.	Equipment identified as SCH, Labelling and tagging correct. SIS identification correct. *Comment observations in section 6.6.*	
6.4	Confirm no visible signs of system and equipment modification, relocation, or not fit for purpose by comparing against controlled copy of SCH, P&ID and configuration. Highlight equipment checked on controlled copy of SCH & P&ID.	No visible signs of unauthorised modification or relocation. Equipment is clean and of sound physical condition, mountings, cable entries and process connections are fit for designed purpose with unrestricted access. *Comment observations in section 6.6.*	
6.5	Confirm no visible signs of additional plant or parallel systems which could affect the SIS or invalidate testing.	No new additional plant equipment or BPCS systems. *Comment any issues in section 6.6.and review / rectify prior to starting functional testing.*

7 AS FOUND FUNCTIONAL PROOF TESTING PROCEDURE

7.1 TK561-SIF1 - Tank 561 As Found Functional Testing

Purpose of Test			
To verify the as found operation of LE56101 Tank 561 Independent high high level trip closes XV56101 FINAL ELEMENT valve. To verify the as found Manual Shutdown functions of Tank 561 FINAL ELEMENT XV56101 valve. To verify the correct DIAGNOSTICS information. *If sensing element defective the tank could overfill if a demand is made on the overfill protection system.* *If manual shutdown systems defective the FINAL ELEMENT could fail to close if a demand is made on the terminal shutdown systems.* *If response target time is exceeded the tank could overfill following demand.* *If FINAL ELEMENT travel time is reduced excessive pipeline surge pressure could be generated.* *Diagnostic information not displayed correctly could result in undetected tank overfill, system unavailability or incorrect operational response.*			
Controlled Copy Documentation Required

1 REVISION HISTORY

Rev	Description
A	Original Issue

This document will be revised with any additions to or removals from IME-SIS1 throughout the operational lifecycle of the system.

2 INTRODUCTION

This document provides a procedure for documentation verification to ensure that the Safety Instrument System Life Cycle complies with the requirements of the standard BS EN 61511.

3 SCOPE

Client / Company	-	Immingham Storage Co Ltd
Location / Facility	-	ISCo East Terminal
Plant Unit	-	Tanks 561, 564 & 568
Service	-	No4 East Storage Tank Overfill Protection
SIS Tag No	-	IME-SIS1
SIF's Tag No's	-	TK561-SIF1, TK564-SIF1 & TK568-SIF1
SIL	-	2

Lifecycle Stages

Operation and Maintenance	-	BS EN 61511 Clause 16

Audience

This document has been produced for use by competent persons knowledgeable in testing Safety Instrumented Systems.

Brief System Description

IME-SIS1 under test is to prevent the overfill of storage tanks 561, 564 & 568 when on import duty. The system is classified as SIL2.

Full system description in documentation reference SI277001_RPT – IME-SIS1 Safety Instrument System and Piping & Instrument Diagrams – IME-K-0028 – Tank 561, IME-K-0052 – Tank 564 & IME-K-0050 – Tank 568.

Procedure

This procedure outlines the necessary steps required to verify the correct documentation used for testing and identify modifications to the system since the last testing phase.

Detailed in this report are the methods of test for documentation associated with IME-SIS1. The results of these tests will be recorded in this report, historical data will be recorded and approved as satisfactory in report reference SI483015_RPT - IME-SIS1 Operation, Maintenance and Modification Lifecycle.

All faults should be reported to the system keeper. If further work is required the system keeper will initiate it.

4 DEFINITIONS AND ABBREVIATIONS

The following definitions and abbreviations apply to this document.

BPCS	Basic Process Control System
Logic Solver	Part of the SIS that performs one or more logic functions, e.g. safety relay, trip amplifier
Proof Test	Periodic testing to detect failures in a safety instrumented system
Protection Layer	A mechanism that reduces risk by control, prevention or mitigation
Sensor	Part of the SIS which measures the process condition
SIF	Safety Instrumented Function – A function with a specified safety integrity level which is necessary to achieve functional safety
SIL	Safety integrity level – A numerical number, 1 to 4 stipulating the level of integrity the system shall perform to, 1 being the lowest 4 the highest
SIS	Safety Instrument System – A SIS comprises of sensors, logic solvers and final elements
1ooN	SIS made up of N independent channels, which are so connected, that any single channel is sufficient to perform the correct safety instrumented function
2ooN	SIS made up of N independent channels, which are so connected, that any two of the channels are required to perform the correct safety instrumented function
MTBF	Mean Time Between Failures
MTTR	Mean Time To Repair
PFD	Probability of Failing on Demand
SCADA	Supervisory Control and Data Acquisition (Visual display screen)
P&ID	Piping & Instrument Diagram
SCH	Schedule
PTW	Permit to Work

5 PREPARATION

Controlled copies of the following documentation will be required :-
SI483015_RPT - IME-SIS1 Operation, Maintenance and Modification Lifecycle
SI483001_REG - IME-SIS1 Report Register
SI483002_REG - IME-SIS1 Instrument Specification Register
SI483003_REG - IME-SIS1 Drawing Register
SI483004_REG - IME-SIS1 Calculation Register

A controlled copy of this procedure will be used to carry out the testing and will form part of the lifecycle testing documentation.
Controlled copies of all documentation required for testing to be attached.

6 DOCUMENTATION VERIFICATION

Purpose of Test
Pre physical on site testing check of documentation to verify correct documentation to be used for testing and identify modifications to the system since last testing phase. *Incorrect or updated documentation may lead to incomplete testing or undesirable effects on other site systems and terminal operation.*
Controlled Copy Documentation Required
SI483015_RPT - IME-SIS1 Operation, Maintenance and Modification Lifecycle SI483001_REG - IME-SIS1 Report Register SI483002_REG - IME-SIS1 Instrument Specification Register SI483003_REG - IME-SIS1 Drawing Register SI483004_REG - IME-SIS1 Calculation Register

Step	**Method of Test**	**Acceptance Criteria**	**Pass (✓) Fail (x) Initial**
6.1	Compare system documentation to registers. Highlight documentation checked on controlled copy of registers. Review changes since last testing phase as documented in SI483015_RPT - IME-SIS1 Operation, Maintenance and Modification Lifecycle.	Documentation available and auditable. Documentation revisions reflect installed system. *Comment any issues in section 6.2 and review / rectify prior to starting site work*	*Pass* 
6.2	Comments/Defects/ Remedial Actions – Report ALL to System Keeper		

Documentation as the following registers –
SI483001_REG_A - IME-SIS1 Report Register
SI483002_REG_A - IME-SIS1 Specification Register
SI483003_REG_D - IME-SIS1 Drawing Register
SI483004_REG_A - IME-SIS1 Calculation Register

Tested by	**Position**	**Qualification**	**Sign**	**Date**
D.B.Faulkner	*Instrument Engineer*	*ISA84 FSS*		*11.07.2016*

System Keeper Acknowledgement
(Note: Signature confirms System keeper is advised of Comments/Defects/Remedial Actions and will initiate terminal procedures for rectification works and/or isolation of plant as required)

Accepted by	**Position**	**Qualification**	**Sign**	**Date**

A	Original Issue

This document will be revised with any additions to or removals from IME-SIS1 throughout the operational lifecycle of the system.

2 INTRODUCTION

This document provides a procedure for shutdown condition functional proof testing to ensure that the Safety Instrument System Life Cycle complies with the requirements of the standard BS EN 61511.

3 SCOPE

Client / Company	-	Immingham Storage Co Ltd
Location / Facility	-	ISCo East Terminal
Plant Unit	-	Tanks 561, 564 & 568
Service	-	No4 East Storage Tank Overfill Protection
SIS Tag No	-	IME-SIS1
SIF's Tag No's	-	TK561-SIF1, TK564-SIF1 & TK568-SIF1
SIL	-	2

Lifecycle Stages

Operation and Maintenance	-	BS EN 61511 Clause 16

Audience

This document has been produced for use by competent persons knowledgeable in testing Safety Instrumented Systems.

Brief System Description

IME-SIS1 under test is to prevent the overfill of storage tanks 561, 564 & 568 when on import duty. The system is classified as SIL2.
Full system description in documentation reference SI277001_RPT – IME-SIS1 Safety Instrument System and Piping & Instrument Diagrams – IME-K-0028 – Tank 561, IME-K-0052 – Tank 564 & IME-K-0050 – Tank 568.

Procedure

This procedure outlines the necessary steps required to verify the correct equipment is installed, the physical condition of the installed equipment and the functional operation performs the SIF's as designed.

Detailed in this report are the methods of test for each SIF.

The results of these tests will be recorded in this report, historical data will be recorded and approved as satisfactory in report reference SI483015_RPT - IME-SIS1 Operation, Maintenance and Modification Lifecycle.

This report details shutdown condition testing whilst no transfer to the tanks is in operation.

All faults should be reported to the system keeper, with minor repairs carried out if practicable. If further maintenance work is required the system keeper will initiate it.

4 DEFINITIONS AND ABBREVIATIONS

The following definitions and abbreviations apply to this document.

BPCS	Basic Process Control System
Logic Solver	Part of the SIS that performs one or more logic functions, e.g. safety relay, trip amplifier
Proof Test	Periodic testing to detect failures in a safety instrumented system
Protection Layer	A mechanism that reduces risk by control, prevention or mitigation
Sensor	Part of the SIS which measures the process condition
SIF	Safety Instrumented Function – A function with a specified safety integrity level which is necessary to achieve functional safety
SIL	Safety integrity level – A numerical number, 1 to 4 stipulating the level of integrity the system shall perform to, 1 being the lowest 4 the highest
SIS	Safety Instrument System – A SIS comprises of sensors, logic solvers and final elements
1ooN	SIS made up of N independent channels, which are so connected, that any single channel is sufficient to perform the correct safety instrumented function
2ooN	SIS made up of N independent channels, which are so connected, that any two of the channels are required to perform the correct safety instrumented function
MTBF	Mean Time Between Failures
MTTR	Mean Time To Repair
PFD	Probability of Failing on Demand
SCADA	Supervisory Control and Data Acquisition (Visual display screen)
P&ID	Piping & Instrument Diagram
SCH	Schedule
PTW	Permit to Work
RAMS	Risk Assessment and Method Statement

5 PREPARATION

All Health and Safety / Permit To Work systems must be implemented before commencing testing. SI483012_RPT - IME-SIS1 RAMS is to be submitted for approval prior to the site testing.

IME-SIS1 is completely independent of the BPCS, no overrides or special preparations are required to facilitate uncompromised testing.

Controlled copies of the following documentation will be required :-
SI483015_RPT - IME-SIS1 Operation, Maintenance and Modification Lifecycle
SI483018_RPT - IME-SIS1 Shutdown Conditions Proof Testing
SI483010_SCH - IME-SIS1 Instrument Schedule
SI483012_SCH - IME-SIS1 Trip Matrix
SI483001_DWG - Tanks 561, 564 & 568 Cable Overview
IME-K-0028 – Tank 561 P&ID
IME-K-0052 – Tank 564 P&ID
IME-K-0050 – Tank 568 P&ID

SI483017_RPT - IME-SIS1 Documentation Verification to be completed prior to each period of testing to confirm correct revisions of documentation.

A controlled copy of this procedure will be used to carry out the testing and will form part of the lifecycle testing documentation.
Controlled copies of all documentation required for testing to be attached. In addition to procedures documented in this report calibration certificates, engineers reports are to be issued to each item as applicable.

6 HARDWARE VERIFICATION

Purpose of Test
To verify the correct equipment is fitted and no unauthorised modifications have been carried out. To verify equipment physical condition and fitness for purpose. *Equipment may not function correctly if damaged or modified.* *Equipment not identified as SIS may not be reported to the system keeper following works by maintenance / contractors.* *To ensure correct designed/rated equipment is installed.*
Controlled Copy Documentation Required
SI483010_SCH - IME-SIS1 Instrument Schedule SI483012_SCH – IME-SIS1 Trip Matrix SI483001_DWG - Tanks 561, 564 & 568 Cable Overview IME-K-0028 – Tank 561 P&ID IME-K-0052 – Tank 564 P&ID IME-K-0050 – Tank 568 P&ID

Step	Method of Test	Acceptance Criteria	Pass (✓) Fail (x) Initial
6.1	Review procedure with operations and testing personnel.	All personnel familiarised with the scope of works and responsibilities. *Comment any issues in section 6.6 and review / rectify prior to starting testing.*	*Pass*
6.2	Confirm plant preparations satisfactory. *Record PTW No…00453 (Hot)*	Conditions satisfied as detailed on PTW and RAMS. *Comment any issues in section 6.6 and review / rectify prior to starting site work*	*Pass*
6.3	Confirm equipment has not been replaced by comparing against information on SCH. Record method used to identify equipment on controlled copy of SCH Highlight column, e.g. SIS Tag / Serial No etc.	Equipment identified as SCH, Labelling and tagging correct. SIS identification correct. *Comment observations in section 6.6.*	*Pass*
6.4	Confirm no visible signs of system and equipment modification, relocation, or not fit for purpose by comparing against controlled copy of SCH, P&ID and configuration. Highlight equipment checked on controlled copy of SCH & P&ID.	No visible signs of unauthorised modification or relocation. Equipment is clean and of sound physical condition, mountings, cable entries and process connections are fit for designed purpose with unrestricted access. *Comment observations in section 6.6.*	*Pass*
6.5	Confirm no visible signs of additional plant or parallel systems which could affect the SIS or invalidate testing.	No new additional plant equipment or BPCS systems. *Comment any issues in section 6.6.and review / rectify prior to starting functional testing.*	*Pass*

7 AS FOUND FUNCTIONAL PROOF TESTING PROCEDURE

7.1 TK561-SIF1 - Tank 561 As Found Functional Testing

Purpose of Test			
To verify the as found operation of LE56101 Tank 561 Independent high high level trip closes XV56101 FINAL ELEMENT valve. To verify the as found Manual Shutdown functions of Tank 561 FINAL ELEMENT XV56101 valve. To verify the correct DIAGNOSTICS information. *If sensing element defective the tank could overfill if a demand is made on the overfill protection system.* *If manual shutdown systems defective the FINAL ELEMENT could fail to close if a demand is made on the terminal shutdown systems.* *If response target time is exceeded the tank could overfill following demand.* *If FINAL ELEMENT travel time is reduced excessive pipeline surge pressure could be generated.* *Diagnostic information not displayed correctly could result in undetected tank overfill, system unavailability or incorrect operational response.*			
Controlled Copy Documentation Required			
SI483012_SCH – IME-SIS1 Trip Matrix			
Step	**Method of Test**	**Acceptance Criteria**	**Pass (✓) Fail (x) Initial**
7.1.1	Review procedure with operations and testing personnel.	All personnel familiarised with the scope of works and responsibilities. *Comment any issues in section 7.1.12 and review / rectify prior to starting testing.*	*Pass*
7.1.2	Confirm plant preparations satisfactory. *Record PTW No…00453 (Hot).*	Conditions satisfied as detailed on PTW and RAMS. *Comment any issues in section 7.1.12 and review / rectify prior to starting testing.*	*Pass*
7.1.3	Confirm system healthy and reset.	System healthy and reset as detailed on SI483013_SCH Sheet 1. *Comment differences from SCH or if found in tripped state in section 7.1.12.*	*Pass*
7.1.3	XV56101 is normally in the open position, if found closed open via local manual isolation switch. (confirm acceptance criteria @ step 7.1.7 if found open)	Valve action found smooth. *Comment poor action / sticking in section 7.1.12.*	*Pass*
		Opening time – No specific requirement. *Comment times > 120 seconds in section 7.1.12.*	*Pass*
		Correct FINAL ELEMENT valve position and DIAGNOSTICS as detailed on SI483012_SCH Sheet 1. *Comment differences from SCH in section 7.1.12.*	*Pass*

1 REVISION HISTORY

Rev	Description
A	Original Issue

This document will be revised with any additions to or removals from IME-SIS1 throughout the operational lifecycle of the system.

2 INTRODUCTION

This document provides a procedure for documentation verification to ensure that the Safety Instrument System Life Cycle complies with the requirements of the standard BS EN 61511.

3 SCOPE

Client / Company	-	Immingham Storage Co Ltd
Location / Facility	-	ISCo East Terminal
Plant Unit	-	Tanks 561, 564 & 568
Service	-	No4 East Storage Tank Overfill Protection
SIS Tag No	-	IME-SIS1
SIF's Tag No's	-	TK561-SIF1, TK564-SIF1 & TK568-SIF1
SIL	-	2

Lifecycle Stages

Operation and Maintenance	-	BS EN 61511 Clause 16

Audience

This document has been produced for use by competent persons knowledgeable in testing Safety Instrumented Systems.

Brief System Description

IME-SIS1 under test is to prevent the overfill of storage tanks 561, 564 & 568 when on import duty. The system is classified as SIL2.
Full system description in documentation reference SI277001_RPT – IME-SIS1 Safety Instrument System and Piping & Instrument Diagrams – IME-K-0028 – Tank 561, IME-K-0052 – Tank 564 & IME-K-0050 – Tank 568.

Procedure

This procedure outlines the necessary steps required to verify the correct documentation used for testing and identify modifications to the system since the last testing phase.

Detailed in this report are the methods of test for documentation associated with IME-SIS1. The results of these tests will be recorded in this report, historical data will be recorded and approved as satisfactory in report reference SI483015_RPT - IME-SIS1 Operation, Maintenance and Modification Lifecycle.

All faults should be reported to the system keeper. If further work is required the system keeper will initiate it.

4 DEFINITIONS AND ABBREVIATIONS

The following definitions and abbreviations apply to this document.

BPCS	Basic Process Control System
Logic Solver	Part of the SIS that performs one or more logic functions, e.g. safety relay, trip amplifier
Proof Test	Periodic testing to detect failures in a safety instrumented system
Protection Layer	A mechanism that reduces risk by control, prevention or mitigation
Sensor	Part of the SIS which measures the process condition
SIF	Safety Instrumented Function – A function with a specified safety integrity level which is necessary to achieve functional safety
SIL	Safety integrity level – A numerical number, 1 to 4 stipulating the level of integrity the system shall perform to, 1 being the lowest 4 the highest
SIS	Safety Instrument System – A SIS comprises of sensors, logic solvers and final elements
1ooN	SIS made up of N independent channels, which are so connected, that any single channel is sufficient to perform the correct safety instrumented function
2ooN	SIS made up of N independent channels, which are so connected, that any two of the channels are required to perform the correct safety instrumented function
MTBF	Mean Time Between Failures
MTTR	Mean Time To Repair
PFD	Probability of Failing on Demand
SCADA	Supervisory Control and Data Acquisition (Visual display screen)
P&ID	Piping & Instrument Diagram
SCH	Schedule
PTW	Permit to Work

5 PREPARATION

Controlled copies of the following documentation will be required :-
SI483015_RPT - IME-SIS1 Operation, Maintenance and Modification Lifecycle
SI483001_REG - IME-SIS1 Report Register
SI483002_REG - IME-SIS1 Instrument Specification Register
SI483003_REG - IME-SIS1 Drawing Register
SI483004_REG - IME-SIS1 Calculation Register

A controlled copy of this procedure will be used to carry out the testing and will form part of the lifecycle testing documentation.
Controlled copies of all documentation required for testing to be attached.

6 DOCUMENTATION VERIFICATION

Purpose of Test			
Pre physical on site testing check of documentation to verify correct documentation to be used for testing and identify modifications to the system since last testing phase. *Incorrect or updated documentation may lead to incomplete testing or undesirable effects on other site systems and terminal operation.*			
Controlled Copy Documentation Required			
SI483015_RPT - IME-SIS1 Operation, Maintenance and Modification Lifecycle SI483001_REG - IME-SIS1 Report Register SI483002_REG - IME-SIS1 Instrument Specification Register SI483003_REG - IME-SIS1 Drawing Register SI483004_REG - IME-SIS1 Calculation Register			
Step	**Method of Test**	**Acceptance Criteria**	**Pass (✓) Fail (x) Initial**
6.1	Compare system documentation to registers. Highlight documentation checked on controlled copy of registers. Review changes since last testing phase as documented in SI483015_RPT - IME-SIS1 Operation, Maintenance and Modification Lifecycle.	Documentation available and auditable. Documentation revisions reflect installed system. *Comment any issues in section 6.2 and review / rectify prior to starting site work*	*Pass*
6.2	Comments/Defects/ Remedial Actions – Report ALL to System Keeper		

Documentation as the following registers –
SI057001_REG_A – IME-SIS1 Drawing Register
SI057002_REG_A - IME-SIS1 Report Register
SI057003_REG_D - IME-SIS1 Specification Register
SI057004_REG_A - IME-SIS1 Calculation Register

Works scheduled on the following CMMS – Work orders
090932 IE-SIS-SIF-001-TK561-OFP
090936 IE-SIS-SIF-001-TK564-OFP
090937 IE-SIS-SIF-001-TK568-OFP

Tested by	**Position**	**Qualification**	**Sign**	**Date**
D.B.Faulkner	*Instrument Engineer*	*ISA84 FSS*		*04.07.2017*

System Keeper Acknowledgement
(Note: Signature confirms System keeper is advised of Comments/Defects/Remedial Actions and will initiate terminal procedures for rectification works and/or isolation of plant as required)

Lifecycle Stages

Operation and Maintenance	-	BS EN 61511 Clause 16

Audience

This document has been produced for use by competent persons knowledgeable in testing Safety Instrumented Systems.

Brief System Description

IME-SIS1 under test is to prevent the overfill of storage tanks 561, 564 & 568 when on import duty. The system is classified as SIL2.
Full system description in documentation reference SI277001_RPT – IME-SIS1 Safety Instrument System and Piping & Instrument Diagrams – IME-K-0028 – Tank 561, IME-K-0052 – Tank 564 & IME-K-0050 – Tank 568.

Procedure

This procedure outlines the necessary steps required to verify the correct equipment is installed, the physical condition of the installed equipment and the functional operation performs the SIF's as designed.

Detailed in this report are the methods of test for each SIF.

The results of these tests will be recorded in this report, historical data will be recorded and approved as satisfactory in report reference SI483015_RPT - IME-SIS1 Operation, Maintenance and Modification Lifecycle.

This report details shutdown condition testing whilst no transfer to the tanks is in operation.

All faults should be reported to the system keeper, with minor repairs carried out if practicable. If further maintenance work is required the system keeper will initiate it.

4 DEFINITIONS AND ABBREVIATIONS

The following definitions and abbreviations apply to this document.

BPCS	Basic Process Control System
Logic Solver	Part of the SIS that performs one or more logic functions, e.g. safety relay, trip amplifier
Proof Test	Periodic testing to detect failures in a safety instrumented system
Protection Layer	A mechanism that reduces risk by control, prevention or mitigation
Sensor	Part of the SIS which measures the process condition
SIF	Safety Instrumented Function – A function with a specified safety integrity level which is necessary to achieve functional safety
SIL	Safety integrity level – A numerical number, 1 to 4 stipulating the level of integrity the system shall perform to, 1 being the lowest 4 the highest
SIS	Safety Instrument System – A SIS comprises of sensors, logic solvers and final elements
1ooN	SIS made up of N independent channels, which are so connected, that any single channel is sufficient to perform the correct safety instrumented function
2ooN	SIS made up of N independent channels, which are so connected, that any two of the channels are required to perform the correct safety instrumented function
MTBF	Mean Time Between Failures
MTTR	Mean Time To Repair
PFD	Probability of Failing on Demand
SCADA	Supervisory Control and Data Acquisition (Visual display screen)
P&ID	Piping & Instrument Diagram
SCH	Schedule
PTW	Permit to Work
RAMS	Risk Assessment and Method Statement

5 PREPARATION

All Health and Safety / Permit To Work systems must be implemented before commencing testing. SI483012_RPT - IME-SIS1 RAMS is to be submitted for approval prior to the site testing.

IME-SIS1 is completely independent of the BPCS, no overrides or special preparations are required to facilitate uncompromised testing.

Controlled copies of the following documentation will be required :-
SI483015_RPT - IME-SIS1 Operation, Maintenance and Modification Lifecycle
SI483018_RPT - IME-SIS1 Shutdown Conditions Proof Testing
SI483010_SCH - IME-SIS1 Instrument Schedule
SI483012_SCH - IME-SIS1 Trip Matrix
SI483001_DWG - Tanks 561, 564 & 568 Cable Overview
IME-K-0028 – Tank 561 P&ID
IME-K-0052 – Tank 564 P&ID
IME-K-0050 – Tank 568 P&ID

SI483017_RPT - IME-SIS1 Documentation Verification to be completed prior to each period of testing to confirm correct revisions of documentation.

A controlled copy of this procedure will be used to carry out the testing and will form part of the lifecycle testing documentation.
Controlled copies of all documentation required for testing to be attached. In addition to procedures documented in this report calibration certificates, engineers reports are to be issued to each item as applicable.

6 HARDWARE VERIFICATION

Purpose of Test			
To verify the correct equipment is fitted and no unauthorised modifications have been carried out. To verify equipment physical condition and fitness for purpose. *Equipment may not function correctly if damaged or modified.* *Equipment not identified as SIS may not be reported to the system keeper following works by maintenance / contractors.* *To ensure correct designed/rated equipment is installed.*			
Controlled Copy Documentation Required			
SI483010_SCH - IME-SIS1 Instrument Schedule SI483012_SCH – IME-SIS1 Trip Matrix SI483001_DWG - Tanks 561, 564 & 568 Cable Overview IME-K-0028 – Tank 561 P&ID IME-K-0052 – Tank 564 P&ID IME-K-0050 – Tank 568 P&ID			
Step	**Method of Test**	**Acceptance Criteria**	**Pass (✓) Fail (x) Initial**
6.1	Review procedure with operations and testing personnel.	All personnel familiarised with the scope of works and responsibilities. *Comment any issues in section 6.6 and review / rectify prior to starting testing.*	*Pass*
6.2	Confirm plant preparations satisfactory. *Record PTW No…06561 (Hot)*	Conditions satisfied as detailed on PTW and RAMS. *Comment any issues in section 6.6 and review / rectify prior to starting site work*	*Pass*
6.3	Confirm equipment has not been replaced by comparing against information on SCH. Record method used to identify equipment on controlled copy of SCH Highlight column, e.g. SIS Tag / Serial No etc.	Equipment identified as SCH, Labelling and tagging correct. SIS identification correct. *Comment observations in section 6.6.*	*Pass*
6.4	Confirm no visible signs of system and equipment modification, relocation, or not fit for purpose by comparing against controlled copy of SCH, P&ID and configuration. Highlight equipment checked on controlled copy of SCH & P&ID.	No visible signs of unauthorised modification or relocation. Equipment is clean and of sound physical condition, mountings, cable entries and process connections are fit for designed purpose with unrestricted access. *Comment observations in section 6.6.*	*Pass*
6.5	Confirm no visible signs of additional plant or parallel systems which could affect the SIS or invalidate testing.	No new additional plant equipment or BPCS systems. *Comment any issues in section 6.6.and review / rectify prior to starting functional testing.*	*Pass*

Hardware Verification Continued on page 8

6 Hardware Verification Continued .....

6.6	Comments/Defects/ Remedial Actions – Report ALL to System Keeper

Comments
Detailed CompEx inspection Carried out
No Critical Failures
Failures
LE56101 ATEX E1765 Ingress Protection Failure, housing cracked, moisture inside..
SOV56401 ATEX E0515 Ingress Protection Failure, O Ring fail, moisture inside.
Observations
XV56101 Bolt missing
Field Equipment identified by ATEX / SIS tag No

Tested by	Position	Qualification	Sign	Date
D.B.Faulkner	*Instrument Engineer*	*ISA84 FSS*		*06.07.17*

System Keeper Acknowledgement
(Note: Signature confirms System keeper is advised of Comments/Defects/Remedial Actions and will initiate terminal procedures for rectification works and/or isolation of plant as required)

7 AS FOUND FUNCTIONAL PROOF TESTING PROCEDURE

7.1 TK561-SIF1 - Tank 561 As Found Functional Testing

Purpose of Test			
To verify the as found operation of LE56101 Tank 561 Independent high high level trip closes XV56101 FINAL ELEMENT valve. To verify the as found Manual Shutdown functions of Tank 561 FINAL ELEMENT XV56101 valve. To verify the correct DIAGNOSTICS information. *If sensing element defective the tank could overfill if a demand is made on the overfill protection system.* *If manual shutdown systems defective the FINAL ELEMENT could fail to close if a demand is made on the terminal shutdown systems.* *If response target time is exceeded the tank could overfill following demand.* *If FINAL ELEMENT travel time is reduced excessive pipeline surge pressure could be generated.* *Diagnostic information not displayed correctly could result in undetected tank overfill, system unavailability or incorrect operational response.*			
Controlled Copy Documentation Required			
SI483012_SCH – IME-SIS1 Trip Matrix			
Step	**Method of Test**	**Acceptance Criteria**	**Pass (✓) Fail (x) Initial**
7.1.1	Review procedure with operations and testing personnel.	All personnel familiarised with the scope of works and responsibilities. *Comment any issues in section 7.1.12 and review / rectify prior to starting testing.*	*Pass*
7.1.2	Confirm plant preparations satisfactory. *Record PTW No…06561 (Hot).*	Conditions satisfied as detailed on PTW and RAMS. *Comment any issues in section 7.1.12 and review / rectify prior to starting testing.*	*Pass*
7.1.3	Confirm system healthy and reset.	System healthy and reset as detailed on SI483013_SCH Sheet 1. *Comment differences from SCH or if found in tripped state in section 7.1.12.*	*Pass*
7.1.3	XV56101 is normally in the open position, if found closed open via local manual isolation switch. (confirm acceptance criteria @ step 7.1.7 if found open)	Valve action found smooth. *Comment poor action / sticking in section 7.1.12.*	*Pass*
		Opening time – No specific requirement. *Comment times > 120 seconds in section 7.1.12.*	*Pass*
		Correct FINAL ELEMENT valve position and DIAGNOSTICS as detailed on SI483012_SCH Sheet 1. *Comment differences from SCH in section 7.1.12.*	*Pass*

Tank 561 As Found Functional Testing Continued on page 10

7.1 Tank 561 As Found Functional Testing Continued…

Step	Method of Test	Acceptance Criteria	Pass (✓) Fail (x) Initial
7.1.5	Refer to SI483015_RPT Wet test of probe required minimum of every 5 years. 5 yearly wet test due, remove probe from tank and immerse in suitable liquid. 5 yearly wet test not due not use Nivotester test button. *Record method of test…Nivotester*	System trips closing and inhibiting from reopening FINAL ELEMENT valve and initiating DIAGNOSTICS as detailed on SI483012_SCH Sheet 2 *Comment differences from SCH in section 7.1.12.*	*Pass*
		FINAL ELEMENT valve action found smooth. *Comment poor action / sticking in section 7.1.12.*	*Pass*
		Time from test initiation to trip activation <=2 seconds. *Comment failures in section 7.1.12*	*Pass*
		FINAL ELEMENT valve traveling time >= 90 Seconds *Comment times < 90 Seconds in section 7.1.12*	*Pass* *105 Seconds*
		Time from test initiation to FINAL ELEMENT valve closed <= 180 Seconds *Comment times > 180 Seconds in section 7.1.12*	*Pass* *168 Seconds*
7.1.6	Remove probe from liquid/ release Nivotester test button.	System remains tripped inhibiting from reopening FINAL ELEMENT valves. DIAGNOSTICS as detailed on SI483012_SCH sheets 1 & 2 *Comment failure in section 7.1.12*	*Pass*
7.1.7	Operate Logic Solver Panel SYSTEM RESET pushbutton	System healthy and reset as detailed on SI483012_SCH Sheet 1. FINAL ELEMENT valve automatically reopens. *Comment differences from SCH in section 7.1.12*	*Pass*
		Valve action found smooth. *Comment poor action / sticking in section 7.1.12.*	*Pass*
		Opening time – No specific requirement. *Comment times > 120 seconds in section 7.1.12.*	*Pass*
		Correct FINAL ELEMENT valve position and DIAGNOSTICS as detailed on SI483012_SCH Sheet 1. *Comment differences from SCH in section 7.1.12.*	*Pass*
7.1.8	Operate HS561 Tank 561 Isolation Pushbutton.	Correct FINAL ELEMENT valve position and DIAGNOSTICS as detailed on SI483012_SCH Sheet 2. *Comment differences from SCH in section 7.1.12.*	*Pass*
		Time from test initiation to trip activation <=2 seconds. *Comment failures in section 7.1.12*	*Pass*

7.2 TK564-SIF1 - Tank 564 As Found Functional Testing

Purpose of Test			
To verify the as found operation of LE56401 Tank 564 Independent high high level trip closes XV56401 FINAL ELEMENT valve. To verify the as found Manual Shutdown functions of Tank 564 FINAL ELEMENT XV56401 valve. To verify the correct DIAGNOSTICS information. *If sensing element defective the tank could overfill if a demand is made on the overfill protection system.* *If manual shutdown systems defective the FINAL ELEMENT could fail to close if a demand is made on the terminal shutdown systems.* *If response target time is exceeded the tank could overfill following demand.* *If FINAL ELEMENT travel time is reduced excessive pipeline surge pressure could be generated.* *Diagnostic information not displayed correctly could result in undetected tank overfill, system unavailability or incorrect operational response.*			
Controlled Copy Documentation Required

Tank 568 Valve Air Failure	XV56801	N/A	N/A	N/A	Iso & Vent	SRS					H														Red												*Pass 06.07.17*	
BPCS CONTROL																																						
Local Pneumatic Control Station	XV56101	Switch	"OPEN" or "CLOSE"	N/A	CLOSE	SRS			H																												*Pass 06.07.17*	
Local Pneumatic Control Station	XV56401	Switch	"OPEN" or "CLOSE"	N/A	CLOSE	SRS				H																											*Pass 06.07.17*	
Local Pneumatic Control Station	XV56801	Switch	"OPEN" or "CLOSE"	N/A	CLOSE	SRS					H																											*Pass 06.07.17*	

ABBREVIATIONS
SIS - Safety Instrument System
IHL Independent High Level
BPCS - Basic Process
Control System
ESD - Emergency Shutdown
LB - Line Break / SC - Short Circuit
H - Hardwired / S - Software

NOTES
(1) ESD trips other terminal systems - see xxxxx
(2) Self test, 2 pulse trip and fault condition.
(3) Switch lengh
(4) Full Annunciator functionality in SI468001_MNL
