Anatomy of an Award

Front

Threaded aluminum cap nuts hold the award components together using screws inserted through the piece at final construction. There are also spacers for added depth.

Clear acrylic with a full color print on the under surface of the part creates a dimensional look.

Swirled aluminum accents can be used effectively to compliment a number of different aesthetic ideals. This is also mounted on black acrylic for thickness and structural integrity.

Tiered base of black acrylic adds to the prominence of the award and varying Award sizes; The glue seam for mounting goes on the upper most base surface

Personalization options, in this example, is a sublimated plate mounted to the base. In other situations, personalization can be achieved via either laser engraving or full color printing. Non-Slip rubber feet are also added to the base.
