# TECHNICAL INFORMATION ON DISPOSAL OF OLD AND DEFECTIVE GAS-CHARGED PRESSURIZED SHOCKS & STRUTS

## A. STORAGE OF USED SHOCK ABSORBERS AND STRUTS

1. Store used shock absorbers/struts in containers that are in good condition (no severe rusting, apparent structural defects, or deterioration) and do not leak.
2. Label all containers "Used Oil".
3. If there is a spill or release of oil to the environment from used shock absorbers/struts, follow the instructions given in number 5 of section C, below.
4. Either: a) Disassemble the used shock absorbers/struts to recycle the oil. (Follow instructions given in section B and C, below). OR b) Properly dispose of the used shock absorbers/struts.

## B. FOR SAFETY REASONS, ALWAYS WEAR SAFETY GLASSES AND PROTECTIVE GLOVES.

- 1 Place shock absorber in a horizontal position in a vice.
- 2 Make sure the shock absorber is secure and cannot move during the drilling operation.

- 3 Before drilling, pull out the rod until fully extended.
- 4 Check whether the unit is a high pressure monotube or low pressure twintube type. All high pressure monotube shock absorbers have a special marking "high pressurized-do not heat or open".

**FOR LOW PRESSURE TWINTUBE (135 PSI) OR CONVENTIONAL TWINTUBE:**

**FOR HIGH PRESSURE MONOTUBES (400 PSI):**

- 5 Drill a 1/16" hole in the reserve tube (a1), 1" from the lower body end. It is quite possible that the gas pressure may force oil out of the hole while drilling and therefore precautions should be taken to restrict the flow by placing a cloth around the area.

- 6 After the gas pressure is released, drill a 1/4" hole at (a1), 1/2" deep.

- 7 Compress the shock absorber by minimum 1".

- 8 Drill another 1/4" hole, 1/2" deep, 1" from the top side (b1). Remove the unit from the vice and hold it over a suitable container to collect the oil.

- 5 Drill a small 1/8" hole, 1" from the lower body end (a) in order to remove the gas. It is quite possible that the gas pressure may force oil out of the hole while drilling and therefore precautions should be taken to restrict the flow by placing a cloth around the area.

- 6 Drill two additional 1/8" holes at (b, 1" from the top) and (c, 1 1/2" from the bottom) to remove the oil (go to step 9).

- 9 Move piston rod up and down to accelerate oil removal.
- 10 The shock absorber oil needs to be disposed of in an appropriate container (to be treated like motor oil) in accordance with U.S. Waste Disposal Laws.

- 11 Check with the local authorities for information about where the oil and remaining parts should be disposed of.

## C. SHOCK ABSORBER AND STRUT OIL STORAGE AND RECYCLING INSTRUCTIONS:

1. Underground tanks with a capacity greater than 110 gallons used to store waste oil are subject to existing U.S. EPA regulations for underground storage tanks. The regulations include leak detection, corrosion protection, and spill/overflow requirements.
2. Do not mix oil drained from scrap units with used motor oil or any other wastes.
3. If there is a spill or release of used oil to the environment, stop the release and contain the oil. Clean up and manage oil spill residues properly.
4. Used oil must be transported by a licensed waste oil hauler to a reputable oil recycler. The waste oil hauler and the oil recycler must each have a U.S. EPA identification number.
5. To find a used oil recycler in your area, contact the National Oil Recyclers Association. To check the status of your states used oil program, contact your state's used oil program office.

### ENGINEERED TO MATCH YOUR DRIVING NEEDS

One of the key advantages of Monroe® ride control technologies is our application-engineered internal valving approach, which ensures that the Monroe shock absorber you select - regardless of the vehicle or vocation - will match the OEM-specified ride and handling profile.

This engineering advantage ensures that your new Monroe Commercial Vehicle shock absorbers provide the steering, stopping and stability characteristics you need for comfortable, productive and safe driving.

### CONÇUS POUR RÉPONDRE À VOS BESOINS SPÉCIFIQUES

Un des principaux avantages des technologies de suspension de Monroe® est notre système de soupape interne conçue selon l'application, qui fait en sorte que l'amortisseur Monroe que vous choisissez - sans égard au véhicule ou à sa vocation - respectera les spécifications de l'ÉO concernant la suspension et la tenue de route.

Cet avantage technique fait en sorte que vos nouveaux amortisseurs Monroe pour véhicule commercial vous procurent la direction, le freinage et la stabilité dont vous avez besoin pour une conduite confortable, productive et sécuritaire.

### DISEÑADOS PARA AJUSTARSE A LAS NECESIDADES DE CONDUCCIÓN QUE USTED TENGA

Una de las ventajas clave de las tecnologías de control de la suspensión Monroe® es nuestro enfoque de valvulado interno diseñado para ajustarse a la aplicación, que asegura que el amortiguador Monroe que usted seleccione, independientemente del vehículo o campo de aplicación, se ajustará al perfil de suspensión y maniobrabilidad especificado por el fabricante del equipo original (OEM).

Esta ventaja de diseño asegura que sus nuevos amortiguadores Monroe para vehículos comerciales brinden las características de dirección, frenado y estabilidad que usted necesita para una conducción cómoda, productiva y segura.

### WHAT IS THE SAFETY TRIANGLE™ INSPECTION?

The Safety Triangle Inspection checks critical interconnected system components that control steering, stopping and stability.

Going beyond tires and brakes to include shocks, struts, springs, tie rod ends, ball joints and a host of other suspension and chassis parts, the Safety Triangle is vital to a driver's ability to avoid accidents. Just one worn part could diminish vehicle control and compromise safety.

### EN QUOI CONSISTE L'INSPECTION DU TRIANGLE DE SÉCURITÉ™?

L'inspection du Triangle de sécurité vérifie les composants essentiels et interreliés des systèmes qui contrôlent la direction, le freinage et la stabilité.

Outre les pneus et les freins, on vérifie les amortisseurs, les jambes de suspension, les ressorts, les embouts de biellette de direction, les joints à rotule et une série d'autres pièces de suspension et du châssis. Le Triangle de sécurité est essentiel à la capacité du conducteur à éviter des accidents. Une seule pièce usée peut diminuer le contrôle du véhicule et compromettre la sécurité.

### ¿QUÉ ES LA INSPECCIÓN DEL TRIÁNGULO DE SEGURIDAD™?

La Inspección del Triángulo de Seguridad comprueba los componentes interconectados cruciales del sistema que controlan la dirección, el frenado y la estabilidad.

Al ir más allá de las llantas y los frenos para incluir los amortiguadores, struts, resortes, terminales de la dirección, rótulas y una amplia variedad de otras piezas de la suspensión y del chasis, el Triángulo de Seguridad es vital para la capacidad del conductor para evitar accidentes. Una sola pieza desgastada podría reducir el control y poner en peligro la seguridad.
