By following our tips, Online Banking can be a safe and efficient method for handling your banking needs.

User Identification and Password

Security starts at your computer. Never share your login ID or password with anyone. Make sure your password is hard to guess by combining random numbers and letters instead of using your birth date, pet's name or other obvious clues.

Secure Sockets Layer Encryption (SSL)

This technology scrambles data as it travels between your computer and your bank, making it difficult for anyone to access your account information. SSL is a trusted method of securing internet transactions.

Browser Registration

In addition to your personal password security, we have added additional security measures with Browser Registration. Browser Registration strengthens the safeguards in place at login by adding additional steps to verify your identity. Although these security enhancements are benefiting you and your security, you probably will not notice them during your regular day-to-day experience.

Online Banking Safety Tips

- > Ensure your web browser, operating system, anti-virus software and other applications are current and support 128-bit encryption.
- > Memorize your passwords.
- > Exit your Online Banking session when finished.
- > Do not leave your computer unattended when logged into Online Banking.
- > Do not use public computers or unsecured WiFi when accessing online banking.
- > If you receive an error when logged into your online banking account, report the error to customer service

Security

Your financial institution will never send unsolicited emails asking you to provide, update, or verify personal or confidential information via return email. If you receive an email inquiry allegedly from your financial institution, please report the incident to a customer service representative as quickly as possible.

To mitigate the risk of online fraud and identity theft, your first and best protection is awareness.

Phishing

Phishing is an online scam tactic that is used to lure users into unknowingly providing personal data, such as credit card information or login IDs and passwords. Using spoof (look-a-like) emails and websites, the tactic attempts to gain the trust of unsuspecting targets and convince them that vital information is being requested by a vendor they may already have a relationship with, such as their bank.

Identity Theft

It is important that our customers are aware of the dangers of identity theft. Identity theft can occur when criminals find a way to steal your personal or other identifying information and assume the use of that data to access your personal accounts, open new accounts, apply for credit in your name, purchase merchandise and commit other fraud or related crimes using your identity.

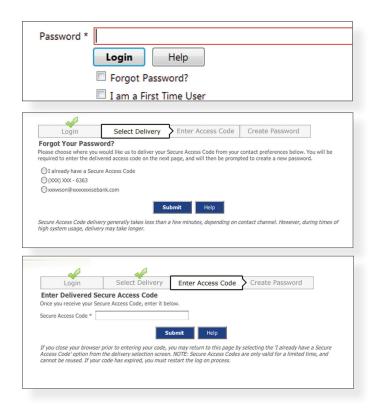

Fraud Prevention Tips

- > Do not open email attachments or click on a link from unsolicited sources.
- > Avoid completing email forms or messages that ask for personal or financial information.
- Do not trust an email asking you to use a link for verification of login or account details.
- > Monitor your account transactions for unauthorized use.
- Shred old financial information, invoices, charge receipts, checks, unwanted pre-approved credit offers and expired charge cards before disposing of them.
- > Contact the sender by phone if you are suspicious of an email attachment.

Getting Started & Logging In

You will enter your Access ID on the homepage of our website.

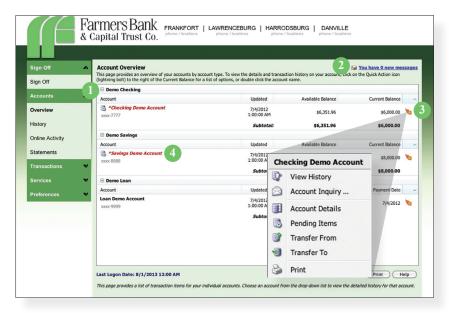

Note: If all of the contact information we have on file is inaccurate or out-ofdate, you cannot proceed any further. Please contact us to provide updated information.

What is a Secure Access Code? A Secure Access Code is a one-time use code, that allows you to securely login to our Online Banking system. It is delivered to you via phone call or SMS text. If you are logging in for the first time, you will be prompted to create a new password. Secure Access Codes are also used if you delete the security certificate or "cookie" that we've stored on your computer, or if you request login from a computer not setup for repeated use. Choosing "activate my computer for later use" authorizes us to store a security certificate on your computer which will speed up the verification process in the future, and eliminate the need to use a Secure Access Code on each login.
